# Foreword

The measurement initiative steering group was set up by the RICS quantity surveying and construction professional group to research the problems associated with the measurement of building works at all stages of the design and construction process. The steering group quickly came to the conclusion that significant improvements were required.

The development units on measurement set up by the measurement initiative steering group have produced a suite of documents covering all aspects of the measurement and description of a building project – from ‘cradle to grave’.

This volume, *RICS new rules of measurement: Detailed measurement for building works* (‘NRM 2’), provides fundamental guidance on the quantification and description of building works for the purpose of preparing bill of quantities and quantified schedules of works; it also provides a sound basis for designing and developing standard or bespoke schedules of rates. Direction on how to deal with items that are unquantifiable is also provided – e.g. preliminaries, overheads and profit, contractor designed works, risk transfer and fluctuations.

The *RICS new rules of measurement: Detailed measurement for building works* provides a uniform basis for measuring and describing building works and embodies the essentials of good practice.

NRM 2 replaces the *Standard Method of Measurement for Building Works* (‘SMM’), which was first published by RICS in 1922, with the latest edition being SMM7, published in 1988.

This first edition will become operative on 1 January 2013 and is post dated accordingly.

## Acknowledgments

The development of the *RICS new rules of measurement: Detailed measurement for building works* was facilitated by the RICS Quantity Surveying and Construction Professional Group under the direction of the steering group.

### Lead authors:

- David Bengé, Gleeds Cost Management Limited
- John Davidson, Consultant

### Contributors:

- Simon Cash, Appleyards
- Graham Hadden, V B Johnson
- Michael Jewell, MDA Consulting
- Michael Rickard (Harvey Frost)
- Justin Sullivan, Adair Associates
- Keith Tweedy

### Steering Group:

- **Chair:** Stuart Earl, Gleeds Cost Management Limited
- David Bengé, Gleeds Cost Management Limited
- Alan Cripps, RICS
- John Davidson, Consultant
- Adrian Green, Laing O'Rourke
- Andy Green, Faithful and Gould
- Joe Martin, BCIS
- Alan Muse, RICS
- Sean Smylie, Shepherd Construction; Contractors Legal Group; UK Contractors Group
- Roy Stratton, Countryside Properties

The Steering Group express their thanks to the professional institutions and trade bodies, and to the quantity surveyors and building contractors for their co-operation and advice in the detailed consultations that have taken place. The steering group and development unit also express their thanks to the surveyors who have assisted in testing the *RICS new rules of measurement: Detailed measurement for building works*, and to the editors who have had the task of bringing together the final document.

# Introduction

## Status of the RICS new rules of measurement

These rules have the status of a guidance note. Where recommendations are made for specific professional tasks, these are intended to represent 'best practice', i.e. recommendations which in the opinion of RICS meet a high standard of professional competence.

Although members are not required to follow the recommendations contained in the note, they should take into account the following points.

When an allegation of professional negligence is made against a surveyor, a court or tribunal may take account of the contents of any relevant guidance notes published by RICS in deciding whether or not the member had acted with reasonable competence.

In the opinion of RICS, a member conforming to the practices recommended in this note should have at least a partial defence to an allegation of negligence if they have followed those practices. However, members have the responsibility of deciding when it is inappropriate to follow the guidance.

It is for each surveyor to decide on the appropriate procedure to follow in any professional task. However, where members do not comply with the practice recommended in this note, they should do so only for a good reason. In the event of a legal dispute, a court or tribunal may require them to explain why they decided not to adopt the recommended practice. Also, if members have not followed this guidance, and their actions are questioned in an RICS disciplinary case, they will be asked to explain the actions they did take and this may be taken into account by the Panel.

In addition, guidance notes are relevant to professional competence in that each member should be up to date and should have knowledge of guidance notes within a reasonable time of their coming into effect.

## Document status defined

RICS produces a range of standards products. These have been defined in the table below. This document is a guidance note.

Type of document	Definition	Status
RICS practice statement	Document that provides members with mandatory requirements under Rule 4 of the Rules of Conduct for members	Mandatory
RICS code of practice	Standard approved by RICS, and endorsed by another professional body that provides users with recommendations for accepted good practice as followed by conscientious practitioners	Mandatory or recommended good practice (will be confirmed in the document itself)
RICS guidance note	Document that provides users with recommendations for accepted good practice as followed by competent and conscientious practitioners	Recommended good practice
RICS information paper	Practice based information that provides users with the latest information and/or research	Information and/or explanatory commentary

## The RICS new rules of measurement (NRM) suite of documents in context

The *RICS new rules of measurement* (NRM) is a suite of documents issued by the RICS Quantity Surveying and Construction Professional Group. The rules have been written to provide a standard set of measurement rules that are understandable by anyone involved in a construction project.

The rules provide essential guidance to all those involved in, as well as those who wish to be better informed about, the cost management of construction projects. Although the *RICS new rules of measurement* are principally based on UK practice, the requirements for a coordinated set of rules and underlying philosophy behind each volume have worldwide application.

- NRM 1: Order of cost estimating and cost planning for capital building works
- NRM 2: Detailed measurement for building works
- NRM 3: Order of cost estimating and cost planning for building maintenance works.

The NRM suite comprises the following three volumes:

### **NRM 1: Order of cost estimating and cost planning for capital building works**

This volume provides indispensable guidance on the quantification of building works for the purpose of preparing cost estimates and cost plans. Direction on how to quantify other items forming part of the cost of a construction project, but which are not reflected in the measurable building work items, is also provided – i.e. preliminaries, overheads and profit, project team and design team fees, risk allowances, inflation, and other development and project costs.

NRM 1 is the ‘cornerstone’ of good cost management of construction projects – enabling more effective and accurate cost advice to be given to clients and other project team members, as well as facilitating better cost control.

Although written primarily for the preparation of order of cost estimates and cost plans, the rules will be invaluable when preparing approximate estimates.

In addition, the rules can be used as a basis for capturing historical cost data in the form required for order of cost estimates and elemental cost plans, thereby completing the ‘cost management cycle’.

### **NRM 2: Detailed measurement for building works**

This volume provides fundamental guidance on the detailed measurement and description of building works for the purpose of obtaining a tender price. The rules address all aspects of bill of quantities (BQ) production, including setting out the information required from the employer and other construction consultants to enable a BQ to be prepared, as well as dealing with the quantification of non-measurable work items, contractor designed works and risks. Guidance is also provided on the content, structure and format of BQ, as well as the benefits and uses of BQ.

While written mainly for the preparation of bill of quantities, quantified schedules of works and quantified work schedules, the rules will be invaluable when designing and developing standard or bespoke schedules of rates.

These rules provide essential guidance to all those involved in the preparation of bill of quantities, as well as those who wish to be better informed about the purpose, use and benefits of bill of quantities.

### **NRM 3: Order of cost estimating and cost planning for building maintenance works**

This volume provides essential guidance on the quantification and description of maintenance works for the purpose of preparing initial order of cost estimates during the preparation stages of a building project, cost plans during the design development and pre-construction stages, and detailed, asset-specific cost plans during the pre-construction phases of a building project. The guidance provided by the rules also aids the procurement and cost control of maintenance works.

The rules follow the same framework and premise as *NRM 1: Order of cost estimating and cost planning for capital building works*. Consequently, they give direction on how to quantify and measure other items associated with maintenance works, but which are not reflected in the measurable maintenance work items – i.e. maintenance contractor's management and administration charges, overheads and profit, other maintenance-related costs, consultants' fees and risks in connection with maintenance works.

Unlike capital building works projects, maintenance works are required to be carried out from the day a building or asset is put to use until the end of its life. Accordingly, while the costs of a capital building works project are usually incurred by the building owner/developer over a relatively short-term, costs in connection with maintenance works are incurred throughout the life of the building – over the long-term. Consequently, the rules provide guidance on the measurement and calculation of the time value of money, guidance on using the measured data to inform life cycle of cost plans and forward maintenance plans, as well as VAT, and taxation.

*NRM 3: Order of cost estimating and cost planning for building maintenance works*, together with *NRM 1: Order of cost estimating and cost planning for capital building works*, presents the basis of good cost management of capital building works and maintenance works – enabling more effective and accurate cost advice to be given to clients and other project team members, as well as facilitating better cost control.

## Identity

The rules are called *NRM 2: Detailed measurement for building works*.

## Enquiries

Enquiries concerning the rules may be made in the first instance to the Quantity Surveying and Construction Professional Group at RICS.

Any suggestions for future revisions are welcomed and may also be sent to the Quantity Surveying and Construction Professional Group at RICS.

# Part I: General

# Part I: General

## 1.1 Introduction

- 1.1.1 This part places detailed measurement for bill of quantities, schedules of works and work schedules in context with the RIBA Outline Plan of Work and the OGC Gateway Process; and explains the symbols, abbreviations and definitions used in the rules.

## 1.2 Measurement in context with the RIBA Plan of Work and OGC Gateway Process

- 1.2.1 Throughout this document, references are made to both the RIBA Plan of Work and the OGC Gateway Process and the RIBA Work Stages/OGC Gateways within.
- 1.2.2 The RIBA Plan of Work is a construction industry recognised framework that organises the process of managing and designing building projects and administering building contracts into a number of key work stages. The RIBA Plan of Work has 11 sequential steps known as 'RIBA Work Stages'. Despite its apparent linear nature, it should be recognised that the sequence or content of the RIBA Work Stages may need to be varied or overlapped to suit the proposed procurement method. Consequently, when two or more RIBA Work Stages are combined, it is not always transparent when a building project is moving from one stage to another. As such, it is an ideal tool, provided that it is conceptualised as providing the basic outline of the building project process.
- 1.2.3 As an alternative to the RIBA Plan of Work, central civil government, the health sector, local government and the defence sector have adopted the OGC Gateway Process as best practice for managing and designing building projects. The process examines programmes and projects at key decision-points in their lifecycle. It looks ahead to provide assurance that the employer can progress to the next stage. Project reviews are carried out under OGC Gateway reviews 1 to 5. Typically, a project will undergo three reviews before commitment to invest, and two looking at service implementation and confirmation of the operational benefits.
- 1.2.4 Both the RIBA Plan of Work and the OGC Gateway Process are recognised frameworks for managing and designing building projects.
- 1.2.5 The point at which measurement is carried out by the quantity surveyor/cost manager for the purpose of preparing bill of quantities, or quantified schedule of works, in the context of the RIBA Work Stages and OGC Gateways is shown in Figure 1.1.
- 1.2.6 Bill of quantities are prepared by the quantity surveyor/cost manager at RIBA Work Stage G (Tender Documentation).
- 1.2.7 The project stages from the *RIBA Outline Plan of Work 2007* (overleaf) are reproduced with the permission of the Royal Institute of British Architects.

NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

**Figure 1.1: The RICS formal cost estimating and cost planning stages in context with the RIBA Plan of Work and OGC Gateways (adapted from the RIBA Outline Plan of Work 2007).**

RIBA Work Stages		RICS cost estimating, elemental cost planning and tender document preparation stages	OGC Gateways (Applicable to projects)		
<b>Preparation</b>	<b>A</b>	Appraisal	<b>Order of cost estimates</b> (as required to set authorised budget)	<b>1</b>	Business Justification
	<b>B</b>	Design Brief		<b>2</b>	Delivery Strategy
<b>Design</b>	<b>C</b>	Concept	<b>Formal cost plan 1</b>	<b>3A</b>	Design Brief and Concept Approval
	<b>D</b>	Design Development			
	<b>E</b>	Technical Design	<b>Formal cost plan 3</b> <b>Pre-tender estimate</b>	<b>3B</b>	Detailed Design Approval
<b>Pre-construction</b>	<b>F</b>	Production Information			
	<b>G</b>	Tender Documentation			
	<b>H</b>	Tender Action	<b>Post tender estimate</b>		
<b>Construction</b>	<b>J</b>	Mobilisation	<b>4</b>	<b>4</b>	Readiness for Service
	<b>K</b>	Construction to Practical Completion			
<b>Use</b>	<b>L</b>	Post Practical Completion	<b>5</b>	<b>5</b>	Operational Review and Benefits Realisation

**Note:** A prerequisite of OGC Gateway Review 3: Investment Decision, is that the design brief, concept design and detailed design have been approved and signed off by the Senior Responsible Owner (SRO). For the purpose of comparing the OGC Gateway Process with the RIBA Work Stages, these two decision points are referred to as OGC Gateway 3A (Design Brief and Concept Approval) and OGC Gateway 3B (Detailed Design Approval); with OGC Gateway 3C representing the final OGC Gateway Review 3 (Investment Decision).

## 1.3 Purpose of NRM 2

- 1.3.1** *RICS new rules of measurement: Detailed measurement for building works* has been written to provide a standard set of measurement rules for the procurement of building works that are understandable by all those involved in a construction project, including the employer; thereby aiding communication between the project/design team and the employer.
- 1.3.2** The document provides rules of measurement for the preparation of bill of quantities and schedules of works (quantified). The rules also provide a framework, which can be used to develop bespoke and standard schedules of rates.
- 1.3.3** The rules address all aspects of bill of quantities (BQ) production, including setting out the information required from the employer and other construction consultants to enable a BQ to be prepared, as well as dealing with the quantification of non-measurable work items, contractor designed works and risks. Guidance is also provided on the content, structure and format of BQ
- 1.3.4** The *RICS new rules of measurement* suite of documents is based on UK practice but the requirements for a coordinated set of rules and underlying philosophy behind each section have worldwide application.

## 1.4 Use of NRM 2

- 1.4.1** The *RICS new rules of measurement: Detailed measurement for building works* provides a structured basis for measuring building work and presents a consistent approach for dealing with other key cost components associated with a building project when preparing bill of quantities and quantified schedule of works. The rules represent the essentials of good practice.
- 1.4.2** The rules address both the production of bill of quantities (BQ) for entire building project and for discrete work packages. They can also be used to prepare quantified schedules of works and quantified work schedules.
- 1.4.3** In addition, the framework can be used to construct both bespoke and standard schedules of rates for the purpose of:
- (1) Discrete contracts;
  - (2) Term contracts; and
  - (3) Framework arrangements.
- 1.4.4** Users of the rules are advised to adopt metric units as the standard system of measurement. Where the employer requires reference to imperial units these may be provided as supplementary information (e.g. in parenthesis).
- 1.4.5** Although the British Standard BS 8888:2006 *Technical Product Specification* (for defining, specifying and graphically representing products) recommends the inclusion of a comma rather than a point as a decimal marker, and a space instead of a comma as a thousands separator, the traditional UK convention has been adopted in these rules (i.e. a point as a decimal marker and a comma as a thousands separator). Users should take care to ensure that this does not conflict with employer requirements.

## 1.5 Structure of NRM 2

- 1.5.1** This document is divided into three parts with supporting appendices:
- **Part 1** places the places measurement for works procurement in context with the *RIBA Plan of Work* and the *OGC Gateway Process*; and explains the symbols, abbreviations and definitions used in the rules.
  - **Part 2** outlines the benefits of detailed measurement, describes the purpose and uses of *RICS new rules of measurement: Detailed measurement for building works*; explains the function of

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

bill of quantities, provides work breakdown structures for bill of quantities, defines the information required to enable preparation of bill of quantities, describes the key constituents of bill of quantities, explains how to prepare bill of quantities; sets out the rules of measurement for the preparation of bill of quantities; and provides the method for dealing with contractors' preliminaries, contractors' overheads and profit, contractors' design fees, other development/project costs, risks, inflation, and data-gathering for supporting claims for tax incentives.

- **Part 3** comprises the tabulated rules for the measurement and description of building works for the purpose of works procurement.
- **Appendices:**
  - Appendix A: Guidance on the preparation of bill of quantities
  - Appendix B: Template for preliminaries (main contract) pricing schedule (condensed)
  - Appendix C: Template for preliminaries (main contract) pricing schedule (expanded)
  - Appendix D: Template for pricing summary for elemental bill of quantities (condensed)
  - Appendix E: Template for pricing summary for elemental bill of quantities (expanded)
  - Appendix F: Templates for provisional sums, risks and credits
  - Appendix G: Example of a work package breakdown structure

## 1.6 Symbols, abbreviations and definitions

Symbols, abbreviations and certain key words and phrases used in the rules are detailed below.

### 1.6.1 Symbols used for measurement

ha	hectare
hr	hour
kg	kilogramme
kN	kilonewton
kW	Kilowatt
m	linear metre
m <sup>2</sup>	square metre
m <sup>3</sup>	cubic metre
mm	millimetre
mm <sup>2</sup>	square millimetre
mm <sup>3</sup>	cubic millimetre
nr	number
t	tonne
wk	week

## 1.6.2 Abbreviations

BQ	bill of quantities
BQBS	bill of quantities (or BQ) breakdown structure
CBS	cost breakdown structure
OGC	Office of Government Commerce
PC sum	prime cost sum
PC price	prime cost price
RIBA	Royal Institute of British Architects
RICS	Royal Institution of Chartered Surveyors
WBS	work breakdown structure

**Note:** The names of UK government departments are frequently changed. This applies to the Office of Government Commerce. Notwithstanding this, the acronym OGC has not been changed as it is a construction industry recognised phrase.

## 1.6.3 Definitions

**Bill of quantities (BQ)** – means a list of items giving detailed identifying descriptions and firm quantities of the work comprised in a contract.

**Cost breakdown structure (CBS)** – in the context of bill of quantities, represents the financial breakdown of a building project into cost targets for elements or work packages.

**Cost target** – in the context of bill of quantities, means the total expenditure for an element or work package.

**Credit** – means a refund offered by the contractor to the employer in return for the benefit of taking ownership of materials, goods, items, mechanical and electrical plant and equipment, etc. arising from demolition or strip out works.

**Daywork** – means the method of valuing work on the basis of time spent by the contractor's workpeople, the materials used and the plant employed.

**Defined provisional sum** – means a sum provided for work which is not completely designed but for which the following information shall be provided:

- the nature and construction of the work;
- a statement of how and where the work is fixed to the building and what other work is to be fixed thereto;
- a quantity or quantities that indicate the scope and extent of the work; and
- any specific limitations and the like identified.

**Design team** – means architects, engineers and technology specialists responsible for the conceptual design aspects of a building, structure or facility and their development into drawings, specifications and instructions required for construction and associated processes. The design team is a part of the project team.

**Director's adjustment** – means a reduction or addition to the tender price, derived by the contractor's estimating team, offered by the director(s) of the contractor.

**Employer** – means the owner and/or the developer of the building; in some cases the ultimate user. The terms Senior Responsible Owner (SRO) and project sponsor are used by central civil government and the defence sector; being the representatives empowered to manage the building project and make project-specific decisions. For the purpose of these measurement rules, the term 'employer' will also be used interchangeably with Senior Responsible Owner (SRO) or project sponsor.

**Fixed charge** – is for work, the cost of which is to be considered independent of duration.

**Main contractor (or prime contractor)** – means the contractor responsible for the total construction and completion process of the building project. The term ‘prime contractor’ is often used in central civil government and the defence sector to mean ‘main contractor’.

**Main contract preliminaries** – are items that cannot be allocated to a specific element, sub-element or component. Main contract preliminaries include the main contractor’s costs associated with management and staff, site establishment, temporary services, security, safety and environmental protection, control and protection, common user mechanical plant, common user temporary works, the maintenance of site records, completion and post-completion requirements, cleaning, fees and charges, sites services and insurances, bonds, guarantees and warranties. Main contractors’ preliminaries exclude costs associated with subcontractors’ or work package contractors’ preliminaries.

**OGC Gateway Process** – is a process that examines programmes and projects at key decision-points in their lifecycle. It looks ahead to provide assurance that the employer can progress to the next stage. Project reviews are carried under OGC Gateway reviews 1 to 5. Typically, a project will undergo three reviews before a commitment to invest, and two looking at service implementation and confirmation of the operational benefits. The process is best practice in central civil government, the health sector, local government and the defence sector. The emphasis of the OGC Gateway Process is to examine the business case, which requires an assessment of the total development cost of the building project.

**OGC Gateways (or OGC Gateway)** – are key decision points within the OGC Gateway Process.

**Other development/project costs** – means costs that are not necessarily directly associated with the cost of constructing the building, but form part of the total cost of the building project to the employer (e.g. land acquisition costs, fees for letting agents, marketing costs and contributions associated with planning permissions).

**Overheads and profit** – means the contractor’s costs associated with head office administration, proportioned to each building contract, plus the main contractor’s return on capital investment.

**Post tender estimate** – means a cost estimate carried out after the evaluation of tenders to corroborate the funds required by the employer to complete the building project.

**Pre-tender estimate** – means a cost estimate prepared immediately before calling tenders for construction.

**Preliminaries** – see main contract preliminaries and work package contract preliminaries.

**Provisional quantity** – means a quantity which cannot be accurately determined (i.e. an estimate of the quantity).

**Provisional sum** – means a sum of money set aside to carry out work that cannot be described and given in quantified items in accordance with the tabulated rules of measurement. A provisional sum will be identified as either ‘defined’ or ‘undefined’ (see definitions of ‘Defined provisional sums’ and ‘Undefined’).

**Prime cost sum (PC Sum)** – means a sum of money included in a unit rate to be expended on materials or goods from suppliers (e.g. ceramic wall tiles at £36.00/m or door furniture at £75.00/door). It is a supply only rate for materials or goods where the precise quality of those materials and goods are unknown. PC Sums exclude all costs associated with fixing or installation, all ancillary and sundry materials and goods required for the fixing or installation of the materials or goods, subcontractor’s design fees, subcontractor’s preliminaries, subcontractor’s overheads and profit, Main Contractor’s design fees, preliminaries and overheads and profit.

**Residual risk (or retained risk)** – means the risks retained by the employer.

**RIBA Outline Plan of Work** summarises the deliverables required under each RIBA Work Stage.

**RIBA Plan of Work** – is a model procedure dealing with basic steps in decision making for a medium-sized building project. The RIBA Plan of Work sets out a logical structure for building projects, starting with the brief and ending with post-occupancy evaluation. The procedures identify the responsibilities of the design team at each stage of the design and contract administration

process. Each step is referred to as a RIBA Work Stage. The full title of the RIBA Plan of Work is *The Architect's Plan of Work*, published by RIBA, but it is commonly known and referred to as the RIBA Plan of Work in the building construction industry.

**RIBA Work Stage** – means the stage into which the process of designing building projects and administering building contracts may be divided. Some variations of the RIBA Work Stages apply for design and build procurement.

**Statutory undertaker** – means organisations, such as water, gas, electricity and telecommunications companies, that are authorised by statute to construct and operate public utility undertakings.

**Subcontractor** – means a contractor employed by the main contractor to undertake specific work within the building project; also known as specialist, works, trade, work package, and labour only contractors.

**Time-related charge** – is for work, the cost of which is to be considered dependent on duration.

**Undefined provisional sum** – means a sum provided for work that is not completely designed, but for which the information required for a defined provisional sum cannot be provided.

**Work breakdown structure (WBS)** – in the context of bill of quantities, is used to sub-divide a building project into meaningful elements or work packages.

**Work package contractor** – a specialist contractor who undertakes particular identifiable aspects of work within the building project; e.g. ground works, cladding, mechanical engineering services, electrical engineering services, lifts, soft landscape works or labour only. Depending on the contract strategy, works contractors can be employed directly by the employer or by the main contractor.

**Work package contract preliminaries** – are preliminaries that relate specifically to the work that is to be carried out by a work package contractor.

## **Part 2: Rules for detailed measurement of building works**

# Part 2: Rules for detailed measurement of building works

## 2.1 Introduction

- 2.1.1** Part 2 of the rules describes the purpose and uses of *NRM 2: Detailed measurement for building works*; describes the types of bill of quantities (BQ); gives guidance on the preparation and composition of BQ; and defines the information required to enable a BQ to be prepared. Part 2 also sets out the rules of measurement of building items, and the rules for dealing with preliminaries, non-measurable works, and contractor designed works, as well as risks, overheads and profit, and credits.
- 2.1.2** In addition, Part 2 of the rules deals with other aspects of BQ production, including price fluctuations, director's adjustments, daywork and value added tax. Guidance is also provided on the codification of BQ, the use of BQ for cost control and cost management, and the analysis of a BQ to provide cost data.

## 2.2 Purpose of bill of quantities

- 2.2.1** The primary purposes of a bill of quantities (BQ), which becomes a contract document, are:
- to provide a co-ordinated list of items, together with their identifying descriptions and quantities, that comprise the works to enable contractors to prepare tenders efficiently and accurately; and
  - when a contract has been entered into, to:
    - provide a basis for the valuation of work executed for the purpose of making interim payments to the contractor; and
    - provide a basis for the valuation of varied work.
- 2.2.2** Essentially, a BQ is a list of the items with detailed identifying descriptions and quantities, which make up the component parts of a building.

## 2.3 Benefits of bill of quantities

- 2.3.1** Irrespective of what contract strategy is used, at some stage in the procurement process one party will need to quantify the extent of works to be executed; whether it be the employer's quantity surveyor/cost manager, the main contractor or the work package contractors for the purpose of obtaining a price for completing building works, valuing the extent of work complete for purposes of payment, valuing variations in the content or extent of building works, or to support applications for tax or other financial incentives. Consequently, detailed measurement for the purpose of bill of quantities (BQ) production is beneficial for a number of reasons:
- it saves the cost and time of several contractors measuring the same design in order to calculate their bids for competition;
  - it provides a consistent basis for obtaining competitive bids;
  - it provides an extensive and clear statement of the work to be executed;
  - it provides a very strong basis for budgetary control and accurate cost reporting of the contract (i.e. post contract cost control), including:
    - the preparation of cash flow forecasts,
    - a basis for valuing variations, and
    - a basis for the preparation of progress payments (i.e. interim payments);
  - it allows, when BQ items are codified, reconciliation and any necessary transfers and adjustments to be made to the cost plan;

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

- when priced, it provides data to support claims for tax benefits (e.g. capital allowances and value added tax (VAT));
- when priced, it provides data to support claims for grants; and
- it provides one of the best sources of real-time cost data, which can be used for estimating the cost of future building projects (i.e. historic cost information (see 2.17)) as it provides a cost model in a single document.

## 2.4 Types of bill of quantities

**2.4.1** The use of bill of quantities in support of a contract is the traditional and proven means of securing a lump-sum price for undertaking building works. Bill of quantities (BQ) can be:

- firm (to obtain a lump-sum price for a fully designed building project); or
- approximate (subject to remeasurement as built).

### 2.4.2 Firm bill of quantities:

**2.4.2.1** The reliability of the tender price will increase in relation to the accuracy of the quantities provided (i.e. the more precisely the work is measured and described). In theory, were there no design changes, then a firm BQ would provide a price at tender stage, which would equal the final cost. In practice there will be changes, and the BQ provides a good basis for cost control, since the direct cost of change can be assessed with reference to the BQ rates.

**2.4.2.2** The firmer the BQ the better it is as a means of financial control.

### 2.4.3 Approximate bill of quantities:

**2.4.3.1** Approximate BQ are used when there is insufficient detail to prepare firm BQ or where it is decided by the employer that the time or cost of a firm BQ is not warranted. Such contracts do not provide a lump-sum price, but rather tender price totals (i.e. a quantified schedule of rates), since the quantities are subject to re-measurement on completion by the quantity surveyor/cost manager. These contracts are usually subject to greater variation than lump sum contracts and therefore should only be used where time is a limiting factor or where there is great uncertainty in respect of certain elements, such as major excavation and earthworks.

**2.4.3.2** The initial resource cost of an approximate BQ is likely to be lower than for a firm BQ, but the need for re-measurement invariably results in an overall higher resource cost.

**2.4.3.3** Although the quantities are approximate, the descriptions of work items should be correct.

## 2.5 Preparation of bill of quantities

**2.5.1** Bill of quantities (BQ) are produced at 'RIBA Work Stage G (Tender Documentation)' or as an intrinsic part of 'OGC Gateway 3C (Investment Decision)'. The requirements of RIBA Work Stage G, as described in the RIBA Outline Plan of Work, are as follows:

*Preparation and/or collation of tender documentation in sufficient detail to enable a tender or tenders to be obtained for the project.*

**2.5.2** To enable the preparation of BQ, the information resulting from RIBA Work Stages E (Technical Design) and F (Production Information) will be required. The requirements of RIBA Work Stages E and F, as described in the RIBA Outline Plan of Work, are as follows:

*Preparation of technical design(s) and specifications, sufficient to co-ordinate components and elements of the project and information for statutory standards and construction safety.*

*F1 Preparation of production information in sufficient detail to enable a tender or tenders to be obtained.*

*F2 Application for statutory approvals. Preparation of further information for construction required under the building contract.*

*Project stages from the RIBA Outline Plan of Work 2007 (Amended November 2008), copyright Royal Institute of British Architects, are reproduced here with the permission of the RIBA.*

- 2.5.3 The processes defined by RIBA Work Stages E (Technical Design), F (Production Information) and G (Tender Documentation) are commensurate with the processes required to meet the requirements of OGC Gateway 3C (Investment Decision).
- 2.5.4 The information and documents required for the preparation of BQ are described in paragraph 2.14 of these rules.
- 2.5.5 BQ required for a lump sum contract based on firm or approximate quantities will normally be prepared by the employer’s quantity surveyor/cost manager, whereas under a design and build contract, the employer’s project team will prepare the ‘employer’s requirements’ and the BQ or quantified schedules of work will be prepared by either the main contractor or, more likely, the main contractor’s work package contractors. The choice of who quantifies building works is solely down to the employer’s preference of contract strategy (see Figure 2.1 below).

**Figure 2.1: Responsibility for quantifying building works**

Contract strategy	Basis of 'Invitation Documents'	Preparation by
Traditional lump sum	(a) Firm BQ -----	Employer's quantity surveyor/cost manager.
	(b) Approximate BQ	
Design and build	Employer's Requirements	Employer's project team (with compilation normally by the employer's quantity surveyor/cost manager). <b>Note:</b> Quantification of the Employer's Requirements will be carried out by either the main contractor or work package contractors; who will prepare firm or approximate BQ, or quantified schedules of work as appropriate.
Management	(a) Firm BQ -----	} Employer's quantity surveyor/cost manager (or main contractor or work package contractors if 'Invitation Documents' prepared by employer's quantity surveyor/cost manager or main contractor, respectively, are based on either 'specification and drawings' or 'un-quantified schedule of works' (i.e. un-quantified information).
	(b) Approximate BQ	
Management (design and manage)	(a) Firm BQ -----	
	(b) Approximate BQ	
Construction management	(a) Firm BQ -----	
	(b) Approximate BQ	

- 2.5.6 Guidance on the preparation of a bill of quantities (BQ) is given in Appendix A of these rules.

## 2.6 Composition of a bill of quantities

- 2.6.1 Bill of quantities (BQ) usually comprise the following sections:
  - Form of Tender (including certificate of bona fide tender);
  - Summary (or Main Summary);
  - Preliminaries, comprising two sections as follows:
    - Information and requirements; and
    - Pricing schedule;
  - Measured work (incorporating contractor designed works);
  - Risks;

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

- Provisional sums;
- Credits (for materials arising from the works);
- Dayworks (Provisional); and
- Annexes.

### 2.6.2 Form of tender:

**2.6.2.1** This is a document that is used to record the main contractor's price for completing the building project (i.e. his tender price). If accepted by the employer, the tender price will become the 'contract sum'. The form of tender can be a separate document.

**2.6.2.2** A separate 'certificate of bona fide tender', which is completed by the main contractor to confirm that he has not communicated his tender to other parties, is sometimes inserted after the form of tender. Alternatively, the employer's requirements for confirming that bona fide tender has been submitted by the main contractor can be incorporated in the form of tender.

### 2.6.3 Summary (or main summary):

**2.6.3.1** The summary, sometimes called the main summary, is made at either the front or end of the bill of quantities and comprises a list of the bill that form the entire bill of quantities. The total price for each section of the bill of quantities (BQ) is carried forward and inserted against the applicable item listed in the summary. For example, a summary for an elemental bill will address all or some of the following:

- Preliminaries;
- Measured works (including 'Contractor Designed Works':
  - Facilitating works
  - Substructure
  - Superstructure
  - Internal finishes
  - Fittings, furnishings and equipment
  - Services
  - Complete buildings
  - Works to existing buildings
  - External works
- Risks;
- Provisional sums:
  - Defined
  - Undefined
- Works to be carried out by statutory undertakers;
- Overheads and profit;
- Credits (for materials arising from the works);
- Fixed price adjustment;
- Director's adjustment;
- Dayworks (Provisional);
- Total price (to Form of Tender).

**2.6.3.2** Where the measured work has been divided into work sections, the work sections will be listed instead of elements.

**2.6.3.3** At the end of the summary, provision is made to total the list to ascertain the total price and transfer the total to the form of tender, which, subject to verification and any necessary adjustments, will become the contract sum referred to by the conditions of contract.

#### **2.6.4 Preliminaries:**

**2.6.4.1** Preliminaries address and communicate to the contractor items that are not directly related to any component, element, or work section (i.e. measured works). The information provided will enable the contractor to ascertain his or her price for, among other things, management of the building project, site establishment, security, safety, environmental protection and common user mechanical plant, as well as the employer's completion and post-completion requirements. Preliminaries are divided into two sections as follows:

##### **2.6.4.2** *Information and requirements:*

The purpose of the information and requirements section is to describe the building project particulars; the drawings upon which the bill of quantities was based; the work in general; the site and any adjoining properties; the form of contract and any amendments and/or supplementary conditions to the form of contract; the employer's specific requirements; and any specific limitations or restrictions that might impact on the sequence and/or method of working. It also contains information on how to interpret the bill of quantities, including any special methods of measurement (i.e. where the method of measurement has deviated from *NRM 2: Detailed measurement for building works*).

##### **2.6.4.3** *Pricing schedule:*

The pricing schedule is simply a schedule in which the contractor inserts preliminary costs relating to the employer's requirements, and all contractor cost items (including management and staff, site accommodation, services and facilities, mechanical plant, and temporary works items). The quantification of preliminaries is dealt with in paragraph 2.7.

#### **2.6.5 Measured work:**

**2.6.5.1** This is the main part of the bill of quantities, which lists all the items of work to be undertaken. The quantities and descriptions of items should be determined in accordance with the tabulated rules of measurement in Part 3 (Tabulated rules for the measurement of building works) of these rules. Various methods can be used to present the measured work (i.e. bill breakdown structures – see paragraph A.1 at Appendix A: Guidance on the preparation of bill of quantities).

**2.6.5.2** The rules relating to the quantification and description of measured work are given in paragraph 2.8.

#### **2.6.6 Risks:**

**2.6.6.1** This section comprises a list of residual risks (i.e. unexpected expenditure arising from risks that materialise, for example, disposal of contaminated ground material), which the employer wishes to transfer to the contractor. The contractor is required to provide a lump-sum fixed price for taking, managing and dealing with the consequences of the identified risk should it materialise.

**2.6.6.2** The rules relating to the quantification and description of risk are given in paragraph 2.10.

#### **2.6.7 Provisional sums:**

**2.6.7.1** Provisional sums are sums included for any items of work that are anticipated, but for which no firm design has been developed, including any sums listed for any items of work that are to be executed by a statutory undertaker.

**2.6.7.2** This part of the BQ, therefore, lists items of work that cannot be entirely foreseen or detailed accurately at the time tenders are invited (i.e. non-measurable items). Pre-determined sums of money are set against each item, determined by the quantity surveyor/cost manager, to cover their cost.

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

**2.6.7.3** The rules relating to provisional sums are given in paragraph 2.9.1.

### **2.6.8 Credits (for materials arising from the works):**

**2.6.8.1** This section of the BQ comprises a list of materials arising from the works for which the employer requires the contractor to offer a credit.

**2.6.8.2** The rules relating to the quantification and description of credits are given in paragraph 2.12.

### **2.6.9 Dayworks (Provisional):**

**2.6.9.1** This section of the BQ gives provision for the contractor to competitively tender rates and prices for works, which might be instructed to be carried out on a daywork basis.

**2.6.9.2** The rules relating to time-charged work carried out on the basis of daywork rates are given in paragraph 2.13.3 below.

### **2.6.10 Annexes:**

The annexes comprise information referred to in the BQ where it is not contained in, or to be issued as, a separate document. Examples are: performance specifications (if not included in project specification); copies of quotations; and copies of communications with statutory undertakers.

## **2.7 Preliminaries**

**2.7.1** For the most part, preliminaries are the cost of administering a project and providing plant, site staff, facilities site-based services, and other items not included in the rates for measured works.

**2.7.2** Preliminaries are divided into two categories:

- (1) preliminaries (main contract)
- (2) preliminaries (works package contract).

**2.7.3 Preliminaries (main contract)** are divided into two discrete sections:

- (1) information and requirements; and
- (2) pricing schedule.

#### **2.7.3.1** *Information and requirements:*

This is the descriptive part of the preliminaries (main contract), which:

- (1) sets out the project particulars (e.g. the project title, the site address and the names and contact details of the employer and the employer's project team);
- (2) identifies the drawings upon which the bill of quantities was based;
- (3) depicts the boundary of the construction site;
- (4) provides information about existing buildings and existing mains services on or adjacent to the site, and about any existing records that will inform the main contractor of any known or potential hazards that need to be considered;
- (5) identifies known constraints and restrictions that might impact on the main contractor's methodology for constructing the building or buildings;
- (6) describes the building project in general;
- (7) specifies the standard form of contract, together with the contract particulars and any amendments and/or supplementary or special conditions to the standard form of contract, which is to be entered into by the contracting parties; as well as the employer's requirements in respect of insurances, parent company guarantees, performance bonds and collateral warranties;
- (8) explains the documents provided, their content and how they are to be used;

## PART 2: RULES FOR DETAILED MEASUREMENT OF BUILDING WORKS

- (9) confirms the method of measurement (i.e. *NRM 2: Detailed measurement for building works*), how to interpret the bill of quantities, and any special methods of measurement (i.e. where the method of measurement has deviated from the specified rules);
- (10) sets out the employer's specific requirements in respect of:
  - (a) management of the works by the main contractor, including progress reporting, programme management and cost reporting requirements;
  - (b) quality standards to be achieved, and quality control requirements, by the main contractor, including inspection, testing and commissioning requirements;
  - (c) security, safety and protection measures to be provided by the main contractor;
  - (d) facilities, temporary works and services required by the employer;
  - (e) specific requirements such as advertising, the provision of a marketing suite or a topping out event;
  - (f) specific limitations on method, sequence, timing of the 'works' imposed by the employer, including out of normal hours working and phasing requirements;
  - (g) operation and maintenance of the finished building, including operation and maintenance (O&M) manuals, familiarisation training, tools, and spare parts; and
  - (h) post-completion requirements such as maintenance services.

Instructions to tendering contractors and other information relating to the tender process (e.g. information required to be submitted with tender submission, site visits, confidentiality, etc) form part of the invitation documents, but will not form part of the contract documents. Therefore, these should be addressed in a separate document (e.g. Conditions of Tender).

The items to be considered when drafting the main contractor's preliminaries are included in Part A of Table I (Preliminaries (main contract)) at Part 3: Tabulated rules for measurement.

### **2.7.3.2** *Pricing schedule (quantification of main contractor's preliminaries):*

It is not possible for the quantity surveyor/cost manager to quantify the main contractor's preliminaries. This is because it is for the contractor to interpret the information provided as part of the tender invitation documentation. From the information provided, the main contractor will ascertain his method of working and the resources required to complete the building project, as well as identify any other cost items that are to be recovered.

The preliminaries bill is therefore to include a pricing schedule that simply lists the headings under which the main contractor is to price his or her preliminaries items. Templates for preliminaries pricing schedules (condensed and expanded versions) are included in Appendices B and C, respectively, of these rules.

The pricing schedule is a simple a list of cost centres incorporated in the bill of quantities in which the main contractor will insert his charges relating to preliminaries.

The pricing schedule for main contractors' preliminaries is divided into two main cost centres:

- (1) employer's requirements; and
- (2) main contractor's cost items.

The items that comprise these two cost centres are listed and defined in Part B of Table I (Preliminaries (main contract)) at Part 3: Tabulated rules for measurement of these rules.

Notwithstanding this, as part of the priced bill of quantities submitted by the main contractor, it is essential that the quantity surveyor/cost manager obtains a full and detailed breakdown that clearly identifies the items, shows how the price for each item has been calculated, and how the total price for preliminaries has been calculated.

Accordingly, as part of the conditions of tender, the quantity surveyor/cost manager should instruct the main contractor to return along with his or her tender a full and detailed breakdown that shows how the main contractor's total price for preliminaries has been calculated. It should be requested that the main contractor append this information to his priced bill of quantities. To ensure that the main contractor's detailed supporting calculations are presented in an easy-to-read

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

and logical format, the main contractor should be instructed to ascertain the price for preliminaries in accordance with the rules of measurement for main contractor's preliminaries (refer to Part B (Pricing schedule) of Table I (Preliminaries (main contract)) at Part 3: Tabulated rules for measurement of these rules).

It is also essential that the quantity surveyor/cost manager makes it clear to the main contractor in the preliminaries bill and/or preliminaries pricing schedule that costs relating to items that are not specifically identified by the main contractor in his or her full and detailed breakdown will be deemed to have no cost implications or have been included elsewhere within his or her rates and prices.

### **2.7.4 Preliminaries (works package contract):**

#### **2.7.4.1 Information:**

The descriptive part of the work package contract preliminaries is prepared in the same way as the main contract preliminaries. The items to be considered when drafting the work package contracts are included in Part A of Table I (Preliminaries (works package contract) at Part 3: Tabulated rules for measurement of these rules.

#### **2.7.4.2 Pricing schedule:**

For the same reasons as for main contractor's preliminaries, the preliminaries bill for a works package shall comprise a pricing schedule that lists the headings under which the work package contractor will insert his charges relating to preliminaries items. It is a simple schedule comprising a list of cost centres.

The pricing schedule for work package contract preliminaries is divided into two main cost centres:

- (1) employer's requirements; and
- (2) work package contractor's cost items.

The items that comprise these two cost centres are listed and defined in Part B of Table I (Preliminaries (works package contract)) at Part 3: Tabulated rules for measurement of these rules.

Again, as part of the priced bill of quantities submitted by the work package contractor, it is essential that the work package contractor is instructed to provide a full and detailed breakdown that clearly identifies the items, shows how the price for each item has been calculated, and how the total price for preliminaries has been calculated.

## **2.8 Measurement rules for building works**

The rules for measuring and describing building items/components are set out in the tabulated rules of measurement rules for building works at Part 3 (Tabulated rules of measurement for building works) of these rules.

## **2.9 Non-measurable works**

### **2.9.1 Provisional sums:**

- 2.9.1.1** Where building components/items cannot be measured and described in accordance with the tabulated rules of measurement they shall be given as a 'provisional sum' and identified as either 'defined work' or 'undefined work' as appropriate.

## PART 2: RULES FOR DETAILED MEASUREMENT OF BUILDING WORKS

- 2.9.1.2** A provisional sum for defined work is a sum provided for work that is not completely designed but for which the following information shall be provided:
- (1) the nature and construction of the work;
  - (2) a statement of how and where the work is fixed to the building and what other work is to be fixed thereto;
  - (3) a quantity or quantities which indicate the scope and extent of the work; and
  - (4) any specific limitations identified.
- 2.9.1.3** Where provisional sums are given for defined work, the contractor will be deemed to have made due allowance in his or her programming, planning and pricing preliminaries.
- 2.9.1.4** Where any aspect of the information required by paragraph 2.9.1.2 above cannot be given, work shall be described as an 'undefined' provisional sum. Where provisional sums are given for undefined work, the contractor will be deemed not to have made any allowance in programming, planning and pricing preliminaries.
- 2.9.1.5** Any provisional sum given for defined work that does not comprise the information required under 2.9.1.2 above shall be construed as a provisional sum for undefined work; irrespective that it was given in the BQ as a provisional sum for defined work.
- 2.9.1.6** Provisional sums shall be exclusive of overheads and profit. Separate provision is to be made in the BQ for overheads and profit (refer to paragraph 2.11).
- 2.9.2 Contractor designed works:**
- 2.9.2.1** Contractor designed works include any works that require the contractor to undertake its design, whether directly or via a subcontractor. The employer shall be deemed responsible for works not clearly identified as contractor designed works.
- 2.9.2.2** Contractor designed work is sometimes referred to as the 'Contractor Designed Portion (CDP)'.
- 2.9.2.3** Where the contractor is required to take responsibility for the design of discrete parts of the building, such as piled foundations, windows, pre-cast concrete components, roof trusses and/or mechanical and electrical engineering services, the work items shall be identified as 'contractor designed works'.
- 2.9.2.4** The method of quantifying contractor designed work is dependent on the nature of the work.
- 2.9.2.5** Where contractor designed works can be measured and described in accordance with the tabulated rules of measurement (e.g. windows and pre-cast concrete components), the performance objectives or criteria that the contractor will be required to meet are to be clearly defined by way of a preamble to the work items that comprise the contractor designed works. Detailed documents defining the performance objectives and/or criteria to be met are to be incorporated as an annex to the bill of quantities (BQ) and clearly cross-referenced in the preamble.
- 2.9.2.6** Where contractor designed works comprise a complete element or works package (e.g. the entire mechanical and electrical engineering services for the building), the works are to be measured and described as one or more item. The number of items is at the discretion of the quantity surveyor/cost manager but must be sufficient to provide an analysis of the price of the contractor designed works. In the case of elemental BQ, the basis of analysis will be the elements defined in *NRM 1: Order of cost estimating and cost planning for capital building works* (see Figure 2.2). Irrespective of the structure of the analysis, it is essential that the quantity surveyor/cost manager obtains a full and detailed breakdown that clearly shows how the contractor has calculated his price for each item in the analysis.

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

**Figure 2.2: Price analysis for contractor designed works (based on group element 5 (Services) of the RICS new rules of measurement: Order of cost estimating and cost planning for capital building works (NRM 1))**

5.1	Sanitary installations	£236,000.00
5.2	Services equipment	£199,500.00
5.3	Disposal installations	£99,000.00
5.4	Water installations	£142,000.00
5.5	Heat source	£88,000.00
5.6	Space heating and air conditioning	£396,000.00
5.7	Ventilation	£345,500.00
5.8	Electrical installations	£458,000.00
5.9	Fuel installations	£163,000.00
5.10	Lift and conveyer installations	£689,000.00
5.11	Fire and lightning protection	£222,300.00
5.12	Communication, security and control systems	£181,500.00
5.13	Specialist installations	£148,600.00
5.14	Builder's work in connection with services	£59,600.00
	Total (carried to main summary):	<u>3,428,000.00</u>

**2.9.2.7** The quantity surveyor/cost manager is to obtain details of performance objectives and/or criteria from the relevant design consultant (refer to paragraph 2.14.3.2(2) below).

**2.9.2.8** In addition to all costs referred to in paragraph 3.3.3.13 (in Part 3: Tabulated rules of measurement for building works) of these rules, contractor designed works shall be deemed to include all costs in connection with design, design management, and design and construction risks in connection with contractor designed works. Moreover, the contractor will be deemed to have made due allowance in his programming and planning for all design works in connection with contractor designed works.

### **2.9.3 Risks:**

The method of dealing with the employer's residual risks when preparing bill of quantities (BQ) is addressed in paragraph 2.10.

### **2.9.4 Works to be carried out by statutory undertakers**

**2.9.4.1** Works that are required to be carried out by a statutory undertaker are to be given as a 'provisional sum', with the scope of works to be executed by the statutory undertaker described.

**2.9.4.2** The contractor is to be deemed to have made due allowance in his programming, planning and pricing preliminaries for all general attendance on statutory undertakers.

**2.9.4.3** Provisional sums for work to be carried out by statutory undertakers are to be exclusive of overheads and profit. Separate provision shall be made in the BQ for overheads and profit (refer to paragraph 2.11 for further information).

## 2.10 Risks

### 2.10.1 Risks generally:

**2.10.1.1** Every building project involves risks and the proper management of risk saves time and money. Risks can occur at any point of a building project and it is essential that they are identified, assessed, monitored and controlled appropriately and effectively.

**2.10.1.2** At the time of preparing a bill of quantities, a quantified schedule of works, or other quantity-based documents, whether for a complete building project or discrete works package, there will still be a number of risks remaining to be managed by the employer and his or her project team – this is called the employer’s residual risk exposure (or residual risks). A risk response should only be decided after its possible causes and effects have been considered and fully understood. It will take the form of one or more of the following:

- risk transfer to the contractor;
- risk sharing by both employer and contractor; or
- risk retention by the employer.

**2.10.1.3** Risks that can be designed out or avoided should have been addressed by this stage of the design development process. However, if time does not permit these risks to be designed out or properly dealt with, they will need to be dealt with using one of the above risk response strategies.

### 2.10.2 Risk transfer to the contractor:

**2.10.2.1** The object of transferring risk is to pass the responsibility to another party able to control it better. If the risk materialises, the consequences are carried by the other party.

**2.10.2.2** Whenever a risk is transferred there is usually a premium to be paid (effectively the contractor’s valuation of the cost of the risk). Risk transfer will usually give the employer price/cost certainty for that aspect of the works. However, in return for price/cost certainty, the employer is required to pay the risk premium to the contractor, irrespective of whether the risk transferred does or does not materialise.

**2.10.2.3** Risks that the contractor is required to manage, should they materialise, are to be fully described so that it is transparent what risk the contractor is required to manage, and what the extent of services and/or works the employer is paying for. Risks to be transferred to the contractor are to be listed in the BQ under the heading ‘schedule of construction risks’. A template for a ‘schedule of construction risks’ is in Appendix F of these rules.

**2.10.2.4** The contractor will be deemed to have made due allowance in his risk allowances for programming, planning and pricing preliminaries.

**2.10.2.5** Risk allowances inserted by the contractor shall be exclusive of overheads and profit. Separate provision should be made in the BQ for overheads and profit (refer to paragraph 2.11 for further information).

### 2.10.3 Risk sharing by both employer and contractor:

**2.10.3.1** Risk sharing occurs when a risk is not entirely transferred and some elements of it are retained by the employer. It is important that both the employer and the contractor know the value of the portion of the risk for which they are responsible. The objective should be to improve control and to reduce or limit the cost of the risk to the employer, should it materialise.

**2.10.3.2** The method of dealing with risks that are to be shared by both employer and contractor will normally be dealt with using ‘provisional quantities’ with the pricing risk being taken by the contractor and the quantification risk being taken by the employer.

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

### 2.10.4 Risk retention by the employer:

**2.10.4.1** Where risks are to be retained by the employer, the applicable risk allowances included in the cost plan will be retained and managed by the employer or, if empowered by the employer, the project team.

**2.10.4.2** Before deciding to retain a particular risk, the employer might wish to find out what the premium will be if the contractor were to be paid for resolving the risk should it materialise. The employer can then decide whether or not to pay a premium for a defined scope of work. If the employer is content to pay a premium for transferring the risk, it is dealt with as a risk transfer in accordance with paragraph 2.10.2 above.

**2.10.4.3** Risks retained by an employer are not necessarily controllable.

## 2.11 Overheads and profit

**2.11.1** Provision shall be made in the bill of quantities (BQ) for the contractor to apply their required percentage addition for overheads and profit on the following:

- (1) preliminaries;
- (2) measured work, including contractor designed works;
- (3) risk allowances;
- (4) work resulting from the expenditure of provisional sums (i.e. defined provisional sums, undefined provisional sums and works to be undertaken by statutory undertakers).

**2.11.2** When required, overheads and profit can be treated as two separate cost items; namely, 'overheads' and 'profit'.

## 2.12 Credits

**2.12.1** Credits are normally only applicable where the building project comprises the refurbishment or rehabilitation of an existing building, or demolition works. Provision for such provides the employer an opportunity to seek credits for old building materials; components and items; mechanical and electrical plant; and fittings, furnishings and equipment which arise from the stripping out or demolition works and for which the employer is content to pass ownership to the contractor for reuse.

**2.12.2** Credits can be based on a pre-prepared list of items, which is incorporated in the BQ and the contractor invited to insert the amount of credit he will give for each item. Alternatively, the contractor can be invited to list items for which he is willing to offer a credit and the amount of credit he will give for each item.

**2.12.3** A template for 'credits' is provided in Appendix F of these rules.

## 2.13 Other considerations

### 2.13.1 Price fluctuations:

**2.13.1.1** The cost to the contractor of labour and materials etc. used in the works will alter during the contract period (i.e. they will be subject to price fluctuations). It might fall but, more usually, it will rise. The risk of fluctuating prices can be dealt with as follows:

- (1) contractor to price the risk (a fixed or firm price contract); or
- (2) allow provision for contractor to recover full or limited fluctuations on certain prices (a fluctuating price contract).

**2.13.1.2** Most standard forms of contract conditions allow for either alternative to be used by providing clauses which may be included or deleted.

(1) *Fixed price contracts:*

These are contracts in which the price of labour, materials and plant is not subject to fluctuations. Fixed price contracts are sometimes referred to as 'fixed price lump sum contracts', 'firm price contracts', or 'firm price lump sum contracts'.

In the absence of any provision in the contract, or where the provision for recovering of price fluctuations has been deleted, the contractor will be required to take the risk (i.e. price the risk) of price fluctuations during the contract period. In order to cover himself, the contractor will make an estimate of the likely increase in costs and include this in his tender price.

Where there is no provision for recovering of price fluctuations, separate provision is to be incorporated in the bill of quantities for the contractor to tender his fixed price adjustment for pricing the risk. Such provision is to be referred to as either the 'main contractor's fixed price adjustment' or the 'work package contractor's fixed price adjustment', whichever is applicable.

When preparing bill of quantities, the quantity surveyor/cost manager shall ensure that no contract conditions relating to the recovery of price fluctuations exist.

(2) *Fluctuating price contracts:*

These are contracts in which adjustment is allowed for fluctuations in the prices of labour and materials etc. Various degrees of fluctuations are allowed under the provisions of standard contract conditions. The extent to which fluctuations are allowed will have a significant effect upon the contractor's tender price.

Where fluctuations are to be allowed, no provision for 'main contractor's fixed price adjustment' or the 'work package contractor's fixed price adjustment' is required.

**2.13.2 Director's adjustment:**

**2.13.2.1** Separate provision is to be incorporated in the bill of quantities for the contractor to insert a 'director's adjustment'.

**2.13.2.2** It is the responsibility of the contractor's directors, or other senior managers, to secure work for the company. Therefore, before submitting a tender price, the contractor's directors will undertake a commercial review of the project and the estimated price. This review might result in the contractor's directors requiring adjustment to the estimated price, referred to as a 'director's adjustment'. The director's adjustment will include adjustments for commercial matters such as financing charges, cash flow, opportunities and competition. This is a sum added to or omitted from the estimated price to arrive at a tender price.

**2.13.3 Dayworks (provisional):**

**2.13.3.1** Daywork is a method of valuing work on the basis of time spent by the contractor's employees, the materials used and the plant employed.

**2.13.3.2** If required, a schedule of dayworks is to be incorporated in the bill of quantities (BQ). The schedule of dayworks is to comprise a list of the various classifications of labour, estimates of the number of hours against each classification of labour, and estimated lump sums for materials and plant, for which daywork rates and percentage additions for overheads and profit are to be inserted by the contractor. A statement of the conditions under which the contractor will be paid for work executed on a daywork basis is to be given in either the preliminaries bill or schedule of dayworks.

**2.13.3.3** The method of calculating labour time charge rates for work carried out in normal working hours (i.e. productive time) and work carried out outside of normal working hours (i.e. non-productive time) shall be defined in the schedule of dayworks. The definition of normal working hours shall be given in either the preliminaries bill or schedule of dayworks.

**2.13.3.4** The total amount included for daywork by the contractor shall be omitted from the contract sum. The rates and percentage additions included in the BQ shall be used to calculate the price of extra works instructed, which are authorised to be valued on a daywork basis.

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

**Note:** The total price derived from the schedule of dayworks can be included within or excluded from the contract sum. When included, it is to be treated as a provisional sum. When excluded, it shall be clearly stated that the rates, prices and percentage adjustments tendered are included in the contract.

### 2.13.4 Value Added Tax (VAT):

Value added tax (VAT) shall be excluded from bill of quantities (BQ). Notwithstanding this, if required by the employer, provision for the contractor to provide a VAT assessment as part of his tender return can be incorporated in the form of tender.

## 2.14 Information requirements for measurement

**2.14.1** The accuracy of bill of quantities (BQ) is dependent on the quality of the information supplied to the quantity surveyor/cost manager by the employer, designers and other project team members; the more information provided, the more reliable the outcome will be. Where little or no information is provided, the quantity surveyor/cost manager will need to seek decisions from the employer as to how the uncertainty is to be managed and procured (refer to paragraph 2.11).

**2.14.2** To enable the quantity surveyor/cost manager to prepare a BQ, the information in paragraphs 2.14.3 to 2.14.6 inclusive (below) will be required.

### 2.14.3 Specification:

**2.14.3.1** A specification defines what the employer wishes to buy and, consequently, what the contractor is expected to supply.

**2.14.3.2** The two main types of specification used are:

- Prescriptive specifications
- Performance specifications.

(1) *Prescriptive specifications:*

This form of specification is required to enable a firm bill of quantities to be prepared. The function of a prescriptive specification is to prescribe the materials and workmanship required for a building project in as much detail as possible. Specific products and materials will be named, and the assembly of the building will be described and supported with drawn information and schedules (see paragraphs 2.14.4 and 2.14.5 below). Where materials are not named, reference will be made to published standards governing their composition (e.g. British standards or other country specific standards).

Where a prescriptive specification is used, the contractor will not carry any design responsibility.

(2) *Performance specifications:*

A performance specification describes the requirements of a product (e.g. windows), equipment (e.g. chiller plant), system or installation (e.g. mechanical and electrical installations) in terms of the performance objectives or criteria.

The main difference between a performance specification and a prescriptive specification is related to design responsibility. With a performance specification, the contractor is responsible for design development of the specification to meet the performance requirements.

The benefit to the employer is that design will not need to be advanced for performance-specified work before inviting tenders from contractors.

It should be noted that some standard forms of contract conditions do not include provision for contractor designed work. Therefore, care should be taken to ensure that the contract conditions used for the building project clearly transfer design responsibility for contractor designed work to the contractor (e.g. by incorporating supplementary contract conditions or other amendment to the standard forms of contract conditions used). Failure to do this will result in design responsibility remaining with the employer, even though the employer did not undertake the design.

## PART 2: RULES FOR DETAILED MEASUREMENT OF BUILDING WORKS

Usually, the quantity surveyor/cost manager will be faced with a combination of both types of specification, which needs to be organised in the BQ (i.e. separated into measured works and non-measured works).

Insufficient or poorly described information can mislead contractors, resulting in contract variations and potential time-related and/or cost-related claims.

### 2.14.4 Drawn information:

2.14.4.1 Drawn information is required to describe the assembly of the building, as well as any temporary works. Drawings shall be to a suitable scale.

2.14.4.2 Required drawn information shall include:

- *General arrangement (GA) drawings*, comprising:
  - a block plan: this shall identify the site and locates the outlines of the building works in relation to the town plan or other wider context;
  - a site plan: this shall locate the position of the building works in relation to the setting out points, the means of access and the general layout of the site; and
  - plans, sections and elevations: these shall show the position occupied by the various spaces in a building and the general construction and location of the principal elements and components. The extent of elevations and sections shall be as appropriate to cover all major building zones.

General arrangement drawings are sometimes called 'location' drawings.

- *Component drawings*: these shall show the information necessary for manufacture and assembly of a component; including key details/interfaces (e.g. interface between curtain walling system and structure, balconies and the like).

Component drawings are sometimes called 'detail' or 'assembly' drawings.

- *Schematic drawings*: these show how something works and the relation between the parts (e.g. the wiring of an electrical system).
- *Record drawings*: these are a set of drawings that depict the actual as-built conditions of an existing building or structure, including mechanical and electrical engineering services installed. These are required for building projects involving the refurbishment or the demolition (partial or complete) of an existing building or structure.

Record drawings are sometimes called 'existing', 'as-built' or 'as-installed' drawings.

2.14.4.3 Specific requirements for drawn information are further defined in the tabulated rules of measurement in Part 3 of these rules.

### 2.14.5 Schedules:

2.14.5.1 Schedules which provide the information required by the tabulated rules shall be deemed to be drawings. Schedules include:

- Room data sheets (including co-ordinated mechanical and electrical services engineering data sheets);
- Door schedules, including ironmongery;
- Window schedules, including ironmongery;
- Reinforcement (bar bending) schedules
- Landscaping and planting schedule (for internal and external works);
- Drainage schedules;
- Fittings, furnishings and equipment schedules;
- Luminaires schedules;
- Control schedules for mechanical and electrical engineering services;
- Primary mechanical and electrical plant and equipment schedules;
- Duties, outputs and sizes of primary mechanical and electrical plant and equipment;

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

- Builder's work in connection with mechanical and electrical engineering services;
- Other scheduled information necessary to specify the works.

The above list is not meant to be definitive or exhaustive, but simply a guide.

### 2.14.6 Reports and other information:

Reports and/or other information required for the preparation of bill of quantities (BQ) will be dependent on the nature of the building project. However, such documents normally include some or all of the following:

- drawings showing the site boundary and all known site constraints and restrictions, including the means of access, restrictive covenants, party walls, rights of light issues, and rights of access;
- a statement of, and drawing(s) detailing, phasing requirements;
- a statement of, and drawing(s) detailing, construction sequencing requirements;
- details of residual design development and construction risks (i.e. risk register or risk log);
- a schedule of gross external areas (GEA), gross internal floor areas (GIFA), net internal areas (NIA – i.e. usable area for shops, supermarkets and offices) and site area (SA).
- site survey reports, including archaeological survey, ecological survey, invasive plant growth survey, etc.;
- details of wildlife, including protected species, protection measures;
- geotechnical and report(s) describing the intrusive ground and groundwater investigations completed, together with the results (e.g. the results of trial pits, auger holes, window samplers, boreholes, cone penetration tests (CPTs), and standard penetration tests (SPTs));
- environmental report(s) describing the sampling and analysis of soils, together with the results, giving information about the soil, ground water, and gases;
- details of any other facilitating works (e.g. soil stabilisation measures);
- remediation plan describing the method of dealing with contaminated materials and/or invasive plant growth (e.g. Japanese knotweed and giant hogweed), including requirements for post-remediation validation sampling;
- refurbishment and demolition survey reports, providing details of any asbestos containing materials (ACMs) and/or other hazardous materials, together with the scope of removal or encapsulation works required to be undertaken as part of the building works;
- details of any other facilitating works (e.g. soil stabilisation measures);
- details of any party wall awards or other agreements with adjoining owners and statutory undertakers, specifically detailing any requirements of the award to which the contractor should comply to ensure that the employer does not breach any agreement;
- temporary works methodology, drawings and sketches;
- details of which condition of contract is to be used for the building project;
- details of any planning conditions or informatives that the contractor is required to comply with;
- the employer's requirements in respect of insurances;
- the employer's requirements for the contractor to collect and report cost data to support claims for capital allowances, grants, value added tax (VAT) recovery, and other tax incentives;
- the employer's policy documents, which the contractor will be required to comply with (e.g. site rules and regulations, environmental, corporate social responsibilities, and health and safety policies);
- hoarding requirements, including design where this is an employer's requirement;
- details of the employer's post completion requirements (e.g. operation and maintenance of completed building (i.e. works and services)); and
- all other information necessary to construct the preliminaries bill for the building project or work package (refer to Work Section 1 (Preliminaries) at Part 3 (Tabulated rules of measurement for building works) of these rules).

The above list is not meant to be definitive or exhaustive, but merely a guide. It is intended to be used by the quantity surveyor/cost manager to assist in identifying the types of reports and other information required to prepare a robust BQ.

## 2.15 Codification of bill of quantities

### 2.15.1 Planning the bill of quantities breakdown structures:

**2.15.1.1** Before attempting to prepare a bill of quantities (BQ) for a building project, the composition of the building project needs to be determined and the structure of the BQ planned. The composition of a BQ can be viewed as a work breakdown structure (WBS). This is a tree structure which can be used to define and divide a building project into key facets. It is developed by starting with the end objective (i.e. WBS Level 0 – the entire building project) and successively subdividing it into the main components and sub-components that make up the entire building project – providing a hierarchical breakdown. What is more, a WBS initiates the development of the cost breakdown structure (CBS), which can be used to allocate costs to every facet of the building project at each level of the WBS. Together, the WBS and CBS provide a frame of reference for the cost management of a building project during the construction phase (i.e. post contract). In the context of BQ, the WBS is referred to as BQ breakdown structure (BQBS).

**2.15.1.2** There are three principal breakdown structures for BQ. They are:

(1) *Elemental:*

Measurement and description is done by group elements; following the logic arrangement for elemental cost planning defined in *NRM 1: Order of cost estimating and cost planning for capital building works*. Each group element forms a separate section of the BQ, irrespective of the order of work sections in *NRM 2: Detailed measurement for building works*. Group elements are sub-divided through the use of elements, which are further sub-divided by sub-elements.

(2) *Work section:*

Measurement and description is divided into the work sections defined in *NRM 2: Detailed measurement for building works* (refer to the tabulated rules in Part 3 of these rules).

(3) *Work package:*

Measurement and description is divided into employer or contractor defined work packages. Works packages can be based on either a specific-trade package or a single package comprising a number of different trades.

**2.15.1.3** Amplification of these three principal BQ breakdown structures is given in paragraph A.1 (Bill of quantities breakdown structures) at Appendix A (Guidance on the preparation of bill of quantities) of these rules.

### 2.15.2 Codification of bill of quantities:

**2.15.2.1** The work breakdown structure (WBS) for the building project will have been initiated by the quantity surveyor/cost manager when preparing the initial order of cost estimates and developed during the formal cost planning stages (i.e. the cost plan breakdown structure). As part of this process, the cost breakdown structure (CBS) will have evolved. The key benefit of the cost plan breakdown structure is the ability to uniquely identify by a code all group elements, elements, sub-elements, and components (i.e. building components/items) in a numerical and logical manner – providing a codification framework for the cost management, control and reporting of costs. With a unique code, all building components/items can be linked to components, components to sub-elements, sub-elements to elements, elements to group elements, and group elements to the cost limit (i.e. the total estimated cost of the building project). This makes it easier to retrieve, manage and restructure information (i.e. costs and building components/items). Details of the codification framework, including the numbering logic, advocated for cost planning can be found in *NRM 1: Order of cost estimating and cost planning for capital building works*.

**2.15.2.2** For the quantity surveyor/cost manager to manage the cost plan during the procurement and construction phases of the building project (i.e. by reconciling tender prices and project outturn

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

costs against the cost plan), the codification framework used for cost planning must be used as the basis for the codification of building components/items and components in the bill of quantities (BQ).

### 2.15.3 The coding system:

**2.15.3.1** The coding system used for a bill of quantities (BQ) will be dependant on the BQ breakdown structure used. That is:

- Elemental breakdown structure;
- Work sectional breakdown structure; or
- Work package breakdown structure.

#### (1) *Elemental breakdown structure*

When preparing elemental BQ, the BQ breakdown structure is based on the group elements defined by *NRM 1: Order of cost estimating and cost planning for capital building works* (i.e. facilitating works; substructure; superstructure; internal finishes; fittings, furnishings and equipment; services; prefabricated buildings and building units, work to existing buildings, and external works).

The identification numbers used to formulate codes for cost planning are described in *NRM 1: Order of cost estimating and cost planning for capital building works*. The coding system advocated by *NRM 1* is numeric. However, both alpha and numeric codes can be used (letters and numbers). It is recommended that the same approach be used in codifying building components/items (i.e. components and sub-components) in bill of quantities (BQ).

For practical purposes five to six levels of code are considered sufficient in cost planning to achieve the desired level of pre-contract cost control of a building project. The main identification numbers levels are as follows:

- *Level 0: Project number – most building projects will be given a project number, together with a project title or name, to distinguish them from all other projects the company might be working on.*
- *Level 1: Cost plan number – where a building project comprises more than one building or facet, a discrete cost plan will most likely be prepared for each building and key facet; culminating in a ‘summary cost plan’. Therefore, an identification number will be required to distinguish cost plans. This code will not be required for a single cost plan.*

The identification numbers for Level 2, Level 3 and Level 4 are pre-defined by *NRM 1: Cost estimating and cost planning for building works*.

- *Level 2: Group element – identification number pre-defined.*
- *Level 3: Element – identification number pre-defined.*
- *Level 4: Sub-element – identification number pre-defined.*
- *Level 5: Component – user defined (building components/items).*

Because building components/items are described and quantified in greater detail in BQ than those for cost planning, a user defined level 6 identification numbers will need to be introduced for each sub-component of a component that is to be measured in accordance with *NRM 2: Detailed measurement for building works*. The way in which a code can be expanded to include a level 6 identification number for sub-components is shown in the following example.

**Figure 2.3: Example of resultant codes used for codifying components and sub-components in elemental bill of quantities**

Level	Description	Item	Identification numbers	Resultant codes
0	Project number		DPB27	
1	Bill number	Bill no. 3	3	
2	Group element/BQ number	Substructure	1	
3	Element	Foundations	1	
4	Sub-element	Piled foundations	2	
5	Component	Pile cap	1	
6	Sub-component	Excavation	1	DPB27-3.1.1.2.1.1
6	Sub-component	Disposal	2	DPB27-3.1.1.2.1.2
6	Sub-component	Concrete	3	DPB27-3.1.1.2.1.3
6	Sub-component	Reinforcement	4	DPB27-3.1.1.2.1.4
6	Sub-component	Formwork	5	DPB27-3.1.1.2.1.5

**Note:** It might not be necessary to prefix the code for components and sub-components with the project number throughout the BQ.

The resultant codes can be inserted in the right-hand column of the bill paper or in brackets after the bill description.

(2) *Work sectional breakdown structure*

Where a work sectional breakdown structure is used to construct the bill of quantities (BQ), the work sections will be those defined in the work sections in *NRM 2: Detailed measurement for building works* (refer to the tabulated rules in Part 3 of this document). However, for the purposes of cost management and cost control, it is essential that the work sectional breakdown structure can be easily reconciled with the original cost plan breakdown structure.

The method recommended by the rules involves the provision of a secondary code which acts as a suffix to the primary code used for BQ based on an elemental breakdown structure described in sub-paragraph a) above. Examples of suffix codes are illustrated in Figure 2.4 below.

**Figure 2.4: Example of suffix codes used for codifying work sections in work sectional BQ breakdown structure**

Serial no.	Work Section	Suffix
1	Preliminaries (main contract)	/01
1	Preliminaries (works package contract)	/01
2	Off-site manufactured materials, components and buildings	/02
3	Demolitions	/03
4	Alterations, repairs and conservation	/04
5	Excavating and filling	/05
6	Ground remediation and soil stabilisation	/06
7	Piling	/07
8	Underpinning	/08
9	Diaphragm walls and embedded retaining walls	/09
10	Crib walls, gabions and reinforced earth	/10
11	'In-situ' concrete works	/11

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

Serial no.	Work Section	Suffix
12	Precast/composite concrete	/12
13	Precast concrete	/13
14	Masonry	/14
15	Structural metalwork	/15
16	Carpentry	/16
17	Sheet roof coverings	/17
18	Tile and slate roof and wall coverings	/18
19	Waterproofing	/19
20	Proprietary linings and partitions	/20
21	Cladding and covering	/21
22	General joinery	/20
23	Windows, screens and lights	/21
24	Doors, shutters and hatches	/20
25	Stairs, walkways and balustrades	/21
26	Metalwork	/20
27	Glazing	/21
28	Floor, wall, ceiling and roof finishings	/20
29	Decoration	/21
30	Suspended ceilings	/30
31	Insulation, fire stopping and fire protection	/31
32	Furniture, fittings and equipment	/32
33	Drainage above ground	/33
34	Drainage below ground	/34
35	Site works	/35
36	Fencing	/36
37	Soft landscaping	/37
38	Mechanical services	/38
39	Electrical services	/39
40	Transportation	/40
41	Builder's work in connection with mechanical, electrical and transportation installations	/41

### Notes:

- Both alpha and numeric codes can be used (letters and numbers).
- As with elemental BQ, it is not necessary to prefix the code for components and sub-components with the project number throughout the BQ.

Using the examples of sub-components given in Figure 2.3 above, the resulting codes for a work sectional breakdown structure will be:

- Excavation DPB27-3.1.1.2.1.1/04
- Disposal DPB27-3.1.1.2.1.2/04
- Concrete DPB27-3.1.1.2.1.3/04
- Reinforcement DPB27-3.1.1.2.1.4/04
- Formwork DPB27-3.1.1.2.1.5/04

## PART 2: RULES FOR DETAILED MEASUREMENT OF BUILDING WORKS

### (3) *Work package breakdown structure*

Both *NRM 1: Order of cost estimating and cost planning for capital building works* and *NRM 2: Detailed measurement for building works* recognise that cost plans will need to be restructured from elements to works packages for the purposes procurement. However, they make no attempt at standardising works packages. This is because the content of work packages is likely to be different from one building project to another – with the content of work packages often based on the perception of risk to those ultimately liable for the construction works. For example, for one building contract it might be deemed appropriate to have all concrete work carried out under by a single subcontractor. Whereas for another building contract, because of the perceived risks associated with the drainage passing through the ground floor construction, it is considered more appropriate to include the construction of pile caps, ground beams, base slab and below ground drainage in the works package for groundworks.

For that reason, the number and content of work packages need to be carefully planned by the cost manager/quantity surveyor before commencing the preparation of the bill of quantities. Once the work package breakdown structure has been established, the provision of a secondary code which acts as a suffix to the primary code (i.e. that used for BQ based on an elemental breakdown structure described in sub-paragraph (a) above) can be applied.

Figure 2.5 provides typical example of part of a work package breakdown structure, to which suffix codes have been applied. An example of a full work package breakdown structure is given at Appendix G of these rules. The example is not meant to be definitive or exhaustive, but simply for guidance.

**Figure 2.5: Typical example of suffix codes used for codifying work packages when a work package BQ breakdown structure is used**

Serial no.	Work package title/content	Suffix
1	<b>Preliminaries</b>	/01
2	<b>Intrusive investigations:</b> Asbestos and other hazardous materials Geotechnical and environmental investigations Attendance on archaeological investigations Preliminaries (main contract)	/02    /01.2
3	<b>Demolition works:</b> Asbestos and other hazardous materials removal/treatment works Soft strip of building components and sub-components Soft strip of mechanical and electrical engineering services Demolition Preliminaries (works package contract)	/03     /01.2
4	<b>Groundworks:</b> Contaminated ground material removal Preparatory earthworks Excavation and earthworks, including basement excavation, earthwork support and disposal Temporary works – propping of existing basement retaining walls Below ground drainage Ground beams Pile caps Temporary works – piling mats/platforms Ground bearing base slab construction, including waterproofing Basement retaining wall structures, including waterproofing Preliminaries (works package contract)	/04             /01.2
5	<b>Piling:</b> Piling works Preliminaries (works package contract)	/05  /01.2

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

Serial no.	Work package title/content	Suffix
6	Concrete works: Frame Upper floors, including roof structure Core and shear walls Staircases Preliminaries (works package contract)	/06     /01.2
7	Roof coverings and roof drainage	/07
8	External and internal structural walls	/08
9	Cladding	/09
10	Windows and external doors	/10
11	Mastic	/11
12	Non-structural walls and partitions	/12
13	Joinery	/13
14	Suspended ceilings	/14
15	Architectural metalwork	/15
16	Tiling	/16
17	Painting and decorating	/17
18	Floor coverings	/18
19	Fittings, furnishings and equipment	/19
20	Combined Mechanical and Electrical Engineering Services	/20
21	External works	/21

### Notes:

- 1 Only work packages 1 to 6 inclusive have been expanded to illustrate the typical content of the work package.
- 2 As with elemental BQ, it is not necessary to prefix the code for components and sub-components with the project number throughout the BQ.

Again, using the examples of sub-components given in Figure 2.3 above, the resulting codes for a work package breakdown structure will be:

- Excavation DPB27-3.1.1.2.1.1/04
- Disposal DPB27-3.1.1.2.1.2/04
- Concrete DPB27-3.1.1.2.1.3/04
- Reinforcement DPB27-3.1.1.2.1.4/04
- Formwork DPB27-3.1.1.2.1.5/04

As all sub-components relate to the construction of pile caps, they will all be incorporated in the work package for groundworks and, as a consequence, all be given the same suffix.

## 2.16 Cost management/control

**2.16.1** The main purpose of a bill of quantities (BQ) is to present a co-ordinated list of components/items, together with their identifying descriptions and quantities that encompass the building works so that the tendering contractors are able to prepare tenders efficiently and accurately. As well as assisting in ensuring parity of tendering. In addition, BQ provide a vital tool, which can be used by the quantity surveyor/cost manager to manage and control the costs of the building project. Cost management and control uses include:

- Pre-tender estimates;
- Post tender estimates;
- Cost planning;
- Pricing variations; and
- Interim valuations and payment.

#### **2.16.2 Pre-tender estimate:**

Pre-tender estimates are prepared immediately before calling the first tenders for construction. This is the final cost-check undertaken by the cost manager before tender bids for the building project, or any part of the building project, are obtained. When a bill of quantities (BQ) is the basis of obtaining a tender price, the pre-tender estimates will be based on the BQ.

#### **2.16.3 Post-tender estimate:**

A post-tender estimate is prepared at RIBA Work Stage H (tender action), or OGC Gateway 3C (investment decision), after all the construction tenders have been received and evaluated. It is based on the outcome of any post-tender negotiations, including the resolution of any tender qualifications and tender price adjustments. The post-tender estimate will include the actual known construction costs and any residual risks. The aim of this estimate is to corroborate the funding level required by the employer to complete the building project, including cost updates of project and design team fees, as well as other development and project costs, where they form part of the costs being managed by the cost manager. When reporting the outcome of the tendering process to the employer, the quantity surveyor/cost manager should include a summary of the post-tender estimate(s). The post-tender estimate should be fairly accurate because the uncertainties of market conditions have been removed. Post-tender estimates are used as the control estimate during construction.

#### **2.16.4 Cost planning:**

**2.16.4.1** Cost planning is an iterative process, which is performed in steps of increasing detail as more design information becomes available. A cost plan provides both a work breakdown structure and a cost breakdown structure which, by codifying, can be used to redistribute works in elements to works packages for the purpose of procurement and cost control during the construction phase of the building project.

**2.16.4.2** The third formal cost plan stage (completed at RIBA Work Stages E/F (Technical Design/Production Information) is based on technical designs, specifications and detailed information for construction. Formal cost plan 3 will provide the frame of reference for appraising tenders. It also provides the frame of reference for reconciling 'actual costs' against 'cost targets'. This is particularly beneficial where building works are being procured piecemeal (e.g. procuring discrete work packages as their design is completed). The proper use of the cost plan will allow the re-profiling of cost targets as necessary to ensure that the overall cost limit (i.e. the employer's authorised budget) is maintained by the project team.

#### **2.16.5 Pricing variations:**

The rates in a priced bill of quantities (BQ) provide a basis for the valuation of varied work. 'Pro-rata' and 'analogous' rates can also be ascertained from the base rates tendered to calculate the prices of other components not specifically described in the BQ.

#### **2.16.6 Interim valuations and payment:**

**2.16.6.1** Many building projects require interim payments to be paid to the contractor. This is in order to relieve the contractor of the burden of financing the whole of the building works until completion; works which may take many months or years to complete. Within each contract there will be clauses which set out the administrative rules under which the quantity surveyor/cost manager, architect (or contract administrator or project manager, quantity surveyor/cost manager) employer

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

and contractor must operate. In many contracts, while the completion and calculation of the value is important, the method and procedure of the interim valuations and payment which the contractor receives is equally important.

- 2.16.6.2** A priced bill of quantities (BQ) provides a comprehensive list of building components/items. Consequently, when a contract has been entered into, by assessing the building components/items in the BQ, the priced BQ can be used to ascertain periodic valuation of works properly executed in accordance with the provisions of the contract for the purpose of interim valuations and payment.

## 2.17 Analysis, collection and storage of cost data

- 2.17.1** Priced bill of quantities (BQ) make available one of the best sources of real-time cost data, which can be used by quantity surveyors/cost managers to provide expert cost advice on the likely cost of future building projects. Moreover, they afford a complete cost model in a single document.
- 2.17.2** The cost data provided in a BQ can be retrieved, analysed, stored and reprocessed in various ways (e.g. as distinct rates, detailed elemental cost analyses, element unit rates (EUR), cost/m<sup>2</sup> of gross internal floor area, and/or functional unit rates) for use in order of cost estimates and cost plans. It can also be used for benchmarking purposes.
- 2.17.3** *NRM 1: Order of cost estimating and cost planning for capital building works* can be used as a basis for measuring element unit quantities (EUQ) for the purpose of preparing detailed cost analyses of building projects.

# **Part 3: Tabulated rules of measurement for building works**

# Part 3: Tabulated rules of measurement for building works

## 3.1 Introduction

3.1.1 Part 3 of the rules comprise:

- (1) the information and requirements for main contractor's and work package contractors' preliminaries, together with the rules for preparing the preliminaries pricing schedule; and
- (2) the rules of measurement for building components/items.

3.1.2 The use of the tabulated rules is also explained.

3.1.3 Bill of quantities (BQ) are to fully describe and accurately represent the quantity and quality of the works to be carried out. More detail than is required by these rules should be given where necessary to define the precise nature and extent of the required work.

## 3.2 Use of tabulated rules of measurement for building works

### 3.2.1 General

3.2.1.1 The rules of measurement for building works are set out in tables. The tables are divided into two categories, namely those dealing with:

- preliminaries; and
- measurement of building components/items.

3.2.1.2 The rules are written in the present tense.

3.2.1.3 The symbol '/' used between two or more units of measurement or within text, means 'or'.

3.2.1.4 Horizontal lines divide the tables and rules into zones to which different rules apply.

3.2.1.5 Where units of measurement or rules are separated by a broken line ( - - - - ) this denotes a choice of units or choice of ways of measuring the work. The method chosen shall be the best to suit the particular situation.

3.2.1.6 The use of a hyphen (-) or the phrase 'to' between two dimensions in these tables or in a bill of quantities means a range of dimensions exceeding the first dimension stated but not exceeding the second.

### 3.2.2 Tables: preliminaries

3.2.2.1 Work Section I comprises the rules for describing and quantifying preliminaries. It is divided into two sub-sections as follows:

- preliminaries (main contract); and
- preliminaries (work package contract).

3.2.2.2 Both sub-sections are sub-divided into parts as follows:

- Part A: Information and requirements (i.e. dealing with the descriptive part of the preliminaries); and
- Part B: Pricing schedule (i.e. provides the basis of a pricing document for preliminaries).

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

**3.2.2.3** The tables for information and requirements for both preliminaries (main contract) and preliminaries (work package contract) are structured as follows:

- (1) Information and requirements are specified under a number of headings, which are given above each table (i.e. project particulars; drawings and other documents; and the site and existing buildings);
- (2) The left hand column (sub-heading 1) lists the preliminaries items to be considered under each main heading;
- (3) The second column (sub-heading 2) lists the sub-items to be considered under each sub-heading;
- (4) The third column (information requirements) lists the information which shall be included within the preliminaries descriptions; and
- (5) The fourth column (supplementary information/notes) lists supplementary information that might need to be included within the preliminaries descriptions, as well as providing additional guidance on the drafting of preliminaries statements.

**3.2.2.4** The pricing schedule tables for both preliminaries (main contract) and preliminaries (work package contract) are structured as follows:

- (1) The contractor's pricing of preliminaries are captured under a number of headings, which are given above each table (i.e. project particulars; drawings and other documents; and the site and existing buildings);
- (2) The left hand column (component) lists the preliminaries items to be considered under each main heading;
- (3) The second column (included/notes on pricing) lists the sub-items which form part of each item;
- (4) The third column (unit) lists the unit of measurement for preliminaries items;
- (5) The fourth column (pricing method) stipulates if the component is a 'fixed charge', a 'time-related charge', or a combination of both; and
- (6) The fifth column (excluded) describes the items excluded from a component. Where exclusions are stated, cross references to the appropriate component is given.

### 3.2.3 Tables: building components/items

3.2.3.1 Work sections 2 to 41 comprise the rules of measurement for building components/items. They are as follows:

No.	Work Section:
2	Off-site manufactured materials, components and buildings;
3	Demolitions;
4	Alterations, repairs and conservation;
5	Excavating and filling;
6	Ground remediation and soil stabilisation;
7	Piling;
8	Underpinning;
9	Diaphragm walls and embedded retaining walls;
10	Crib walls, gabions and reinforced earth;
11	In-situ concrete works;
12	Precast/composite concrete;
13	Precast concrete;
14	Masonry;
15	Structural metalwork;
16	Carpentry;
17	Sheet roof coverings;
18	Tile and slate roof and wall coverings;
19	Waterproofing;
20	Proprietary linings and partitions;
21	Cladding and covering;
22	General joinery;
23	Windows, screens and lights;
24	Doors, shutters and hatches;
25	Stairs, walkways and balustrades;
26	Metalwork;
27	Glazing;
28	Floor, wall, ceiling and roof finishings;
29	Decoration;
30	Suspended ceilings;
31	Insulation, fire stopping and fire protection;
32	Furniture, fittings and equipment;
33	Drainage above ground;
34	Drainage below ground;
35	Site works;
36	Fencing;
37	Soft landscaping;
38	Mechanical services;
39	Electrical services;
40	Transportation; and
41	Builder's work in connection with mechanical, electrical and transportation installations.

3.2.3.2 Each table is structured as follows:

- (1) The title of the work section is given in the heading;
- (2) The first two rows set out the:
  - (a) drawn information required in respect of each work section to enable measurement and shall accompany the bill of quantities when issued,
  - (b) mandatory information that is to be provided in each work section,
  - (c) minimum information that shall be shown on the drawings or any other document that accompany each work section, and

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

- (d) works and materials that not measured, but are deemed to be included in the building components/items measured in each work section;
- (3) The left hand column (item) lists the building components/items commonly encountered in building works;
- (4) The second column (unit) lists the unit of measurement for building components/items;
- (5) The third column (level 1) lists the information, including any dimension requirements, that shall be included in the description of the building components/items;
- (6) The fourth column (level 2) lists the supporting information, including any additional dimension requirements, which shall be included in the description of the building components/items;
- (7) The fifth column (level 3) lists the further supporting information, including any additional dimension requirements, which shall be included in the description of the building components/items; and
- (8) The sixth column (notes, comments and glossary) explains what work is deemed to be included in specific building components/items, clarifies the approach to quantification and description of building components/items, and contains definitions of specific terms and phrases used in connection with the building components/items.

The building components/items listed in the tables comprise those commonly encountered in building works; the lists are not intended to be exhaustive.

### 3.3 Measurement rules for building works

**3.3.1** BQ shall fully describe and accurately represent the quantity and quality of the works to be carried out. Where necessary, more detail than is required by these rules shall be given in order to define the precise nature and extent of the required work.

#### 3.3.2 Quantities:

The rules for quantifying building components/items are as follows:

- (1) *Measurement and billing:*
  - (a) Measure work net as fixed in position unless otherwise stated.
  - (b) Net quantity measured shall be deemed to include all additional material required for laps, joints, seams and the like, as well as any waste material.
  - (c) Curved work shall be measured on the centre line of the material unless otherwise stated.
  - (d) Dimensions shall be measured to the nearest 10mm. 5mm and over shall be regarded as 10mm and less than 5mm shall be disregarded.
  - (e) Except for quantities measured in tonnes (t), quantities shall be given to the nearest whole number. Quantities less than one unit shall be given as one unit. Quantities measured in tonnes (t) shall be given to two decimal places.
- (2) *Voids:*
  - (a) Unless otherwise stated, minimum deductions for voids refer only to openings or wants within the boundaries of the measured work.
  - (b) Always deduct openings or wants at the boundaries of measured areas, irrespective of size.
  - (c) Do not measure separate items for widths not exceeding a stated limit where these widths are caused by voids.

#### 3.3.3 Descriptions:

**3.3.3.1** Each work section of a bill of quantities shall begin with a heading and a description stating the nature and location of the work.

## PART 3: TABULATED RULES OF MEASUREMENT FOR BUILDING WORKS

- 3.3.3.2** Headings for groups of building components/items (i.e. components and sub-components) in a bill of quantities shall be read as part of the descriptions of the items to which the headings apply.
- 3.3.3.3** Descriptions shall state the building components/items being measured (taken from the first column of the tabulated rules) and include all Level 1, 2 and 3 information (taken from the third, fourth and fifth columns respectively) applicable to that item. Where applicable, the relevant information from column five shall be included in the description.
- 3.3.3.4** Unless specifically stated otherwise in the bill of quantities or in these rules, descriptions for building components/items shall include the:
- (1) type and quality of the material;
  - (2) critical dimension(s) of the material(s);
  - (3) method of fixing, installing or incorporating the goods or materials into the work where not at the discretion of the contractor; and
  - (4) nature or type of background.
- 3.3.3.5** Where the nature or type of background is required to be identified, the building components/items description shall state one of the following:
- (1) timber (the term includes all types of hard and soft building boards);
  - (2) plastics;
  - (3) masonry (the term includes brick, concrete, block, natural and reconstituted stone);
  - (4) metal, of any type;
  - (5) metal-faced timber or plastics; and
  - (6) vulnerable materials (the term includes glass, marble, mosaic, ceramics, tiled finishes, material finishes and the like).
- 3.3.3.6** Dimensions given as part of the description shall be:
- (1) stated in the sequence: length, width and height. Where ambiguity could arise, the dimensions shall be identified in the description;
  - (2) the finished lengths, widths and heights specified or shown on the drawings with no allowance made for overlaps, scarcements and the like.
- 3.3.3.7** Thicknesses given as part of the description shall be the finished thickness of the material after compaction and shall exclude the thickness of adhesives and or bedding materials unless otherwise stated.
- 3.3.3.8** The use of a hyphen (-) or the phrase 'to' between two dimensions in a description shall mean a range of dimensions exceeding the first dimension stated but not exceeding the second.
- 3.3.3.9** Where the rules require work to be described as 'curved' with the radius stated, details shall be given of the curved work, including if concave or convex, if conical or spherical, if to more than one radius, and shall state the radius or radii. The radius shall be the mean radius measured to the centre line of the material unless otherwise stated.
- 3.3.3.10** The information required by these rules may be given by a precise and unique cross-reference to another document (e.g. to a specification or to a catalogue).
- 3.3.3.11** Where other components and sub-components are referred to in other documents (e.g. a specification states that vinyl sheet flooring is to be laid on a plywood lining), each component and or sub-component shall be measured and described separately (i.e. both the vinyl sheet flooring and the plywood lining are to be measured as separate items).
- 3.3.3.12** Notwithstanding the requirements of paragraph 3.3.3.11 above, separate components or sub-components may be combined to form single composite building components/items. In such cases, the description of the composite building components/items shall clearly state what is included and how each component and or sub-component is to be incorporated. Any component,

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

sub-component or other element of the work not clearly included in the description shall be deemed not to be included as part of the composite building components/items.

**3.3.3.13** Unless specifically stated otherwise in the BQ or in these rules, each building component/item shall be deemed to include the following:

- (1) labour and all costs in connection therewith;
- (2) materials and goods together with all costs in connection therewith;
- (3) assembling, installing, erecting, fixing or fitting materials or goods in position;
- (4) plant and all costs in connection therewith;
- (5) waste of goods or materials;
- (6) all rough and fair cutting unless specially stated otherwise;
- (7) establishment charges; and
- (8) cost of compliance with all legislation in connection with the work measured including health and safety, disposal of waste and the like.

### **3.3.4 Work of special types:**

**3.3.4.1** Work of each of the following special types shall be separately identified. Work of special types includes:

- (1) Work to existing buildings: such work is defined as work on, in or immediately under work existing before the current building project. Specific details pertaining to work carried out to an existing building shall be given at the start of each applicable work section.
- (2) Work carried out and subsequently removed: specific details pertaining to work that is to be carried out and subsequently removed shall be given at the start of each applicable work section.
- (3) Work outside the curtilage of the site: specific details pertaining to work to be executed outside the curtilage of the site shall be given at the start of each applicable work section.
- (4) Work carried out in extraordinary conditions, including:
  - (a) in, on or under water, stating whether river, canal, lake or sea and, where applicable, stating the mean spring levels of high and low water;
  - (b) in tidal conditions;
  - (c) underground, stating mean depth;
  - (d) in compressed air, stating the pressure and means of entry and exit; and
  - (e) in other types of extraordinary conditions.

**3.3.4.2** Specific details pertaining to work carried out in each condition shall be given at the start of each applicable work section.

**3.3.4.3** The additional rules for special types of work shall be read in conjunction with the rules in the appropriate work sections.

**3.3.4.4** Details of the additional preliminaries that are pertinent to the special types of work shall be given in the description, drawing attention to any specific requirements due to the nature of the work.

### **3.3.5 Measurable work not covered by the tabulated rules:**

**3.3.5.1** Building components/items not covered by the tabulated rules shall, if possible, be measured by rules for similar types of work. Rules of measurement adopted for such building components/items shall be clearly stated and fully defined in either the preliminaries or in the bill of quantities (against the building components/items or items to which the rule relates). Such rules shall, as far as possible, conform to those given in the tabulated rules of measurement for similar building components/items.

**3.3.5.2** Where it is not possible to derive the method of measurement from the tabulated rules, the rules chosen may be bespoke. In such cases, the rule or rules derived shall be reiterated in full in either the preliminaries or in the bill of quantities (above the building components/items or items to which the rule relates).

**3.3.6 Procedure where work cannot be quantified:**

For the rules relating to work which cannot be quantified, refer to paragraph 2.9 (Non-measurable works) at Part 2 of these rules.

**3.3.7 Procedure where exact type of product or component is not specified:**

**3.3.7.1** Where the exact type of product or component cannot be specified, an estimated price for the product or component shall be given in the description as a prime cost price (PC price). State, for example, 'Allow the PC price of £x per thousand delivered to site', 'Allow the PC price of £y per m<sup>2</sup> delivered to site', or 'Allow £z each delivered to site'.

**3.3.7.2** Unless specifically stated otherwise in the bill of quantities or in these rules, the contractor shall be deemed to have allowed for all items listed in paragraph 3.3.3.13 in his or her priced rate for each building component/item incorporating a PC price.

**3.3.7.3** PC prices shall exclude any allowance for the main contractor's overheads and profit, which are dealt with separately.

**3.3.8 Procedure where quantity of work cannot be accurately determined:**

**3.3.8.1** Where work can be described and given in items in accordance with the tabulated rules of measurement but the quantity of work cannot be accurately determined, an estimate of the quantity shall be given and identified as a 'provisional quantity'.

**3.3.8.2** Work items identified as a 'provisional quantity' shall be subject to remeasurement when they have been completed. The 'approximate quantity' shall be substituted by the 'firm quantity' measured, and the total price for that item adjusted to reflect the change in quantity. Where the variance between the 'provisional quantity' and the 'firm quantity' measured is less than 20 per cent, the rate tendered by the contractor shall not be subject to review. Where the variance is significant (i.e. 20 per cent or more), the rate can be reviewed to ensure that the rate is fair and reasonable to both the employer and contractor.

# Tabulated work sections

## I Preliminaries (main contract)

### Part A: Information and requirements

#### I.1 Project particulars

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
I Project particulars	1 Name of project.	Short project title to be stated.	
	2 Nature of project.	Short description to be stated.	
	3 Location of project.	Full postal address to be stated.	
	4 Length of contract.	Period, in weeks, to be stated.	Where to be stated by the contractor, insert 'To be confirmed'.
	5 Names, addresses and points of contact of employer and consultants.	Function (e.g architect), name of organisation, address, point of contact, telephone number and email address to be stated To include: (1) Employer; (2) Project sponsor (e.g employer's internal project manager). (3) Project manager (if applicable). (4) Principal contractor (under CDM Regulations). (5) Person empowered by the contract to act on behalf of the employer (person's title to be given (e.g. contract administrator)). (6) CDM co-ordinator. (7) Quantity surveyor. (8) Consultants (separately identified). (9) Clerk of works (if required by the employer).	

## 1.2 Drawings

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Drawings	1 List of drawings from which the bill of quantities was prepared.	Drawing number; including revision status, drawing title, and author to be stated.	Exceptions to be stated.
2 Other documents	1 Pre-construction information.	Explain how pre-construction information is dealt with (i.e. within the preliminaries bill or as a separate document). Cross-reference to pre-construction information document if separate document.	
	2 List of drawings and other documents relating to the contract but not included in the tender documents.	(1) Provide a list of drawings and other documents relating to the contract but not included in the tender documents, which may be seen by the contractor during the tender period. (2) Document title, reference, revision, date of issue and author to be stated. (3) Details of where documents can be seen to be stated.	

## 1.3 The site and existing buildings

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 The site		(1) Description of the site. (2) Reference to drawing, or drawings, showing the site boundaries and contractor's working area(s).	
2 Existing buildings on or adjacent to the site		Description of existing buildings on or adjacent to the site.	
3 Surrounding land/building uses	1 Address.	(1) Sub-heading 2 to identify land or building. (2) Use or activities carried out on the land or in building(s).	
4 Existing mains services	1 On the site.	List drawings and other applicable information.	
	2 Adjacent to the site.		
5 Soils and ground water		State information provided and where included in documentation (e.g. 'Annex B of the BQ' or 'as a separate document'). Cross-reference as necessary.	
6 Site investigation			

TABULATED WORK SECTIONS

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
7 Health and safety file	1 Health and safety file. 2 Other documents.	(1) Availability for inspection. (2) Arrangements for inspection.	
8 Health and safety hazards		Details of hazards that are or may be present on the site.	Where information provided in the pre-construction information, cross-reference accordingly.
9 Access to the site		(1) Description. (2) Limitations.	
10 Parking		Details of employer's requirements in respect of parking and payments of fees and charges in connection of parking, including parking bay and parking meter suspensions.	
11 Use of the site		Details of any limitations.	
12 Site visits		(1) Purpose. (2) Arrangements for site visit.	Include where information not given in the 'conditions of tender'.

**1.4 Description of the Works**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 The Works		Description of the Works.	
2 Preparatory work by others		Description of any work that will be carried out by others under a separate contract before the start of work on site for this contract.	
3 Work by others concurrent with the contract		Description of the Works.	
4 Completion work by others			

**1.5 The contract conditions**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
<ul style="list-style-type: none"> <li>I Conditions of contract</li> </ul>	<ul style="list-style-type: none"> <li>I Form of contract title to be stated.</li> </ul>	<ul style="list-style-type: none"> <li>(1) Full title of the standard or bespoke form of contract, including edition, revision, and standard amendments applicable.</li> <li>(2) Schedule of clause/condition headings in the standard form of contract (see note (1)).</li> <li>(3) Reference to any amendments to clauses/conditions to standard form of contract (see note (1)).</li> <li>(4) Reference to any supplementary or special clauses/conditions to standard form of contract.</li> <li>(5) Insertions relating to articles of agreement, articles, recitals and contract particulars or abstract of particulars (see note (1)).</li> <li>(6) Employer's insurance responsibility.</li> <li>(7) Employer's requirements in respect of performance bonds.</li> <li>(8) Employer's requirements in respect of parent company guarantees.</li> <li>(9) Employer's requirements in respect of collateral warranties.</li> </ul>	<ul style="list-style-type: none"> <li>(1) Neither a schedule of clause/condition headings in the standard form of contract nor reference to any supplementary or special clauses/conditions to standard form of contract or details of insertions relating to articles of agreement, articles, recitals and contract particulars or abstract of particulars is required where addressed through a schedule of amendments to the standard conditions of contract. Notwithstanding this, reference to the schedule of amendments is to be made in this section of the preliminaries bill.</li> <li>(2) Where bespoke, or uncommon, forms of contract are used – a copy is to be appended to the bill of quantities or included as part of the tender.</li> </ul>

**1.6 Employer's requirements: Provision, content and use of documents**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
<ul style="list-style-type: none"> <li>I Definitions and interpretations</li> </ul>	<ul style="list-style-type: none"> <li>I Definitions.</li> <li>2 Communication.</li> </ul>	<ul style="list-style-type: none"> <li>Explain how to interpret key words, terms, phrases and synonyms used in the preliminaries and specification.</li> <li>Definition and format of communications, and timing of response.</li> </ul>	

TABULATED WORK SECTIONS

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
	3 Products.	Definition and/or meaning.	
	4 Site equipment.		
	5 Drawings.		
	6 Contractor's choice.		
	7 Contractor's designed work.		
	8 Submit proposals.		
	9 Terms used in specification.	Definitions and/or meaning of key words, terms, phrases and synonyms used in the specification.	
	10 Manufacturer and product references.	(1) Definition of terms. (2) Version of manufacturer's technical literature applicable to tender and contract (e.g. current on the date of invitation to tender).	
	11 Substitution of products.	(1) Definition and/or meaning of substitute/alternative products. (2) Process for acceptance and rejection of substitute/alternative products.	
	12 Cross-references.	Explain method of cross referencing used.	
	13 Referenced documents.	Order of precedence of referenced documents.	
	14 Equivalent products.	Definition and/or meaning.	
	15 Substitution of standards.	(1) Definition and/or meaning. (2) Process for acceptance and rejection of substitute standards.	
	16 Currency of documents.	Version of published documents, including revisions and amendments, applicable to tender and contract (e.g. current on the date of invitation to tender).	
	17 Product sizes.	(1) General definition of product sizes. (2) Exceptions to general definition.	Products to be specified by their co-ordinating size. Exceptions to this rule to be stated.

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
<p>2 Documents provided on behalf of employer</p>	1 Additional copies of drawings and documents.	Describe procedure.	
	2 Dimensions.	Explain ownership of scaled dimensions	
	3 Measured quantities.	Explain precedence of measured quantities.	
	4 The specification.	<p>(1) Reference the specification, or specifications, the preliminaries.</p> <p>(2) Explain the method used to cross reference specification clauses on or in other tender/contract documents.</p>	
	5 Divergence from the statutory requirements.	Method for dealing with divergence from the statutory requirements should they occur.	
	6 Employer's policy documents.	<p>Requirements in respect of compliance with the employer's policies. Examples include:</p> <ul style="list-style-type: none"> <li>- environmental.</li> <li>- sustainability.</li> <li>- corporate social responsibilities (CSR).</li> <li>- health and safety.</li> </ul>	
<p>3 Documents provided by the contractor, subcontractors and suppliers</p>	1 Design information.	<p>(1) General requirements, including design management and programming requirements.</p> <p>(2) Specific requirements in respect of design documents and information.</p> <p>(3) Format.</p> <p>(4) Number of copies.</p> <p>(5) Submission requirements.</p>

**1.12 Employer's requirements: Operation/maintenance of finished building**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
<p>I Operation and maintenance manual</p>	<p>I Generally:</p>	<p>(1) Purpose.                      (2) Scope.                      (3) Responsibility for preparation.                      (4) Information to be provided by others.                      (5) Review process.                      (6) Number of copies.                      (7) Latest date for submission of final manual.                      (8) As-built/as-installed drawings:                      (a) format and standard                      (b) number of copies.</p>	<p>The operation and maintenance information, the health and safety file, and all other information can be combined as a single document. In this case, the document can be referred to as the 'building manual'.</p>
	<p>2 Content.</p>	<p>Specific requirements.</p>	

TABULATED WORK SECTIONS

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
2 Health and safety file	1 Generally  2 Content.	(1) Purpose. (2) Scope. (3) Responsibility for preparation. (4) Information to be provided by the contractor; where not responsible for preparation. (5) Review process. (6) Number of copies. (7) Latest date for submission of final file.  Specific requirements. Specific requirements.	
3 Web-based information management system			
4 Presentation of documents	1 Operation and maintenance manual. 2 Health and safety file. 3 Other documents.	Specific requirements in respect of format and presentation.  Specific requirements.	
5 Other employer specific requirements	1 Maintenance services. 2 Information for commissioning services. 3 Training. 4 Spare parts. 5 Tools.	Specific requirements for post completion maintenance (planned and reactive).  Specific requirements.	
6 Other information		Specific requirements.	

# I Preliminaries (main contract)

## Part B: Pricing schedule

### I.1 Employer's requirements

#### I.1.1 Site accommodation

Component	Included/notes on pricing	Unit	Pricing method	Excluded
I Site accommodation	<p>Site accommodation for the employer and the employer's representatives where separate from main contractor's site accommodation, including:</p> <ul style="list-style-type: none"> <li>- site offices.</li> <li>- sanitary accommodation.</li> <li>- welfare facilities.</li> <li>- foundations to site accommodation.</li> <li>- temporary drainage to accommodation.</li> <li>- temporary services.</li> <li>- intruder alarms.</li> </ul> <p>Type and extent of accommodation to be provided to be stated; with each type separately quantified.</p> <ol style="list-style-type: none"> <li>1 Bringing to site and installing, including all temporary drainage, services and intruder alarms.</li> <li>2 Adaptations/alterations during works.</li> <li>3 Dismantling and removing from site, including rectifying any damage.</li> <li>4 Maintaining.</li> <li>5 Cleaning.</li> <li>6 Charges.</li> <li>7 Off-site rented temporary accommodation.</li> <li>8 Rectifying damage to off-site rented temporary accommodation.</li> </ol>	item	Fixed charge.	Site accommodation, furniture and equipment, telecommunication and IT systems for the employer and the employer representatives where an integral part of the main contractor's site accommodation (included in section I.2: in contractor's cost items, as appropriate).
		weeks	Time-related charge.	
		item	Fixed charge.	

TABULATED WORK SECTIONS

Component	Included/notes on pricing	Unit	Pricing method	Excluded
2 Furniture and equipment	Furniture and equipment for the employer and the employer's representatives where separate from main contractor's site accommodation. For example, desks, chairs, meeting table and chairs, cupboards, kettles, coffee maker, photocopier and consumables.	item	Fixed charge.	
	1 Bringing to site and installing.			
	2 Cleaning.	week	Time-related charge.	
	3 Charges.			
3 Telecommunications and IT systems	4 Dismantling and removing from site.	item	Fixed charge.	
	Telecommunication and IT systems for the employer and the employer's representatives where separate from main contractor's site accommodation, including telephones, fax machines, photocopier, computers, printers and consumables.			
	1 Purchase charges.	nr	Fixed charge.	
	2 Hire charges.	week	Time-related charge.	
	3 Consumables.			

1.1.2 Site records

Component	Included	Unit	Pricing method	Excluded
1 Site records	1 Operation and maintenance manuals.	item	Fixed charge.	
	2 Completion of health and safety file.			
2 Web-based information management system	1 Provision of system.			
	2 Uploading of data.			
	3 Training of building user's staff in the operation of the web-based management system.			

**1.1.3 Completion and post-completion requirements**

Component	Included	Unit	Pricing method	Excluded
1 Handover requirements	1 Training of building user's staff in the operation and maintenance of the building engineering services systems.	item	Fixed charge.	
	2 Provision of spare parts for maintenance of building engineering services.			
	3 Provision of tools and portable indicating instruments for the operation and maintenance of building engineering services systems.			
2 Operation and maintenance services	1 Operation and maintenance of building engineering services installations, mechanical plant and equipment and the like during the defects liability period, period for rectifying defects, maintenance period or other specified period (i.e. additional services that are normally required by the contract).	week	Time-related charge.	
3 Landscape management services	1 Maintenance of internal and external planting.			

**1.2 Main Contractor's cost items**

**1.2.1 Management and staff**

Component	Included	Unit	Pricing method	Excluded
1 Project-specific management and staff	Main contractor's project specific management and staff such as:	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	1 Security staff (included in section I.2.4: Security).
	1 Project manager/director.			
	2 Construction manager.			
	3 Supervisors, including works/trade package managers, building services engineering managers/co-ordinators and off-site production managers.			
	4 Health and safety manager/officers.			
5 Commissioning manager (building engineering services).				

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
	6 Planning/programming manager and staff. 7 Senior/managing quantity surveyor. 8 Project/package quantity surveyors. 9 Procurement manager. 10 Design manager. 11 Project engineers. 12 Environmental manager. 13 Temporary works design engineers. 14 Materials management staff (e.g. storeman). 15 Administrative staff, including secretary, document controllers, finance clerks and the like. 16 Other management and staff.			
2 Visiting management and staff	1 Managing director, regional director, operations director, commercial director and the like. 2 Quality manager. 3 Contracts/commercial manager. 4 Health and safety manager. 5 Environmental manager/consultant. 6 Other visiting management and staff.			Visiting management and staff for which an allowance has been made within the main contractor's overheads.
3 Extraordinary support costs	1 Legal advice costs (i.e. solicitors). 2 Recruitment costs. 3 Team building costs. 4 Other extraordinary support costs. 5 Day transport. 6 Personnel transport (i.e. transportation of work operatives to site).	item	Fixed charge.	Extraordinary support costs for which an allowance has been made within the main contractor's overheads.

Component	Included	Unit	Pricing method	Excluded
	7 Temporary living accommodation (e.g. long/medium term accommodation costs).	week (number of staff by number of days per week by number of weeks)		
	8 Subsistence payments.			
	9 Out of normal hours working, including non-productive overtime allowances.			
4 Staff travel	Costs associated with off-site visits such as: 1 Visits to employer's and consultants' offices. 2 Visits to subcontractors' offices/works. 3 Overseas visits. 4 Accommodation charges and overnight expenses.	nr (number of occasions)	Fixed charge.	

**I.2.2 Site establishment**

Component	Included	Unit	Pricing method	Excluded
I Site accommodation	Main contractor's and common user temporary site accommodation such as: <ul style="list-style-type: none"> <li>- offices.</li> <li>- conference/meeting rooms.</li> <li>- canteens and kitchens.</li> <li>- drying rooms.</li> <li>- toilets and washrooms.</li> <li>- first aid room.</li> <li>- laboratories.</li> <li>- workshops.</li> <li>- secure stores.</li> <li>- compounds, including containers for material storage.</li> <li>- security control room.</li> <li>- stairs and office staging.</li> </ul> Type and extent of accommodation to be provided to be stated, with each type separately quantified.			<ol style="list-style-type: none"> <li>1 Employer's accommodation, where not an integral part of the main contractor's site accommodation (included in section I.1.1: Site accommodation).</li> <li>2 Temporary bases, foundations and provision of drainage and services to temporary site accommodation (included in component I.2.2.2: Temporary works in connection with site establishment).</li> <li>3 Service provider's charges for temporary services (included in section I.2.1.2: Fees and charges).</li> <li>4 Rates for temporary services (included in section I.2.1.2: Fees and charges).</li> </ol>

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
	1 Purchase charges.	item	Fixed charge.	
	2 Hire charges.	week	Time-related charge.	
	3 Employer's accommodation, where an integral part of the main contractor's site accommodation.			
	4 Delivery of temporary site accommodation to site, erection, construction and removal.	item	Fixed charge.	
	5 Temporary accommodation made available by the employer.	week	Time-related charge.	
	6 Intruder alarms.	item	Fixed charge.	
	7 Land/property rental where site accommodation located off-site.	week	Time-related charge.	
	8 Alterations and adaptations to site accommodation, including partitioning, doors, painting and decorating, and the like.	item	Fixed charge.	
	9 Relocation and alterations of temporary accommodation during construction stage.			
	10 Reinstating temporary site accommodation to original condition prior to removal from site.			
	11 Removal of site accommodation and temporary works in connection with site accommodation.			
2 Temporary works in connection with site establishment	1 Temporary bases and foundations for site accommodation, including maintenance and reinstatement of existing surfaces on completion of the works.	m <sup>2</sup>	1 Fixed charge. 2 Time-related charge.	1 Provision of temporary services to site establishment (included in section 1.2.3: Temporary services). 2 Provision of temporary drainage to site establishment (included in section 1.2.3: Temporary services). 3 Hoardings, fans, fencing and the like to site boundaries and to form site compounds (included in section 1.2.4: Security (Hoardings, fences and gates)).
	2 Connections to temporary service, including maintenance and removal on completion of the works.	nr		
	3 Connections to temporary drainage, in including maintenance and removal on completion of the works.	nr		
	4 Temporary site roads, paths and pavings (including on-site car parking), including reinstatement of existing surfaces on completion of the works.	m		
	5 Temporary surface water drainage to temporary site roads, paths and pavements, including maintenance and removal on completion of the works.	m		

Component	Included	Unit	Pricing method	Excluded
3 Furniture and equipment	1 Workstations for staff, including maintenance.	nr	1 Fixed charge. 2 Time-related charge.	1 Telephone and fax installations (included in section 1.2.3: Temporary services). 2 Computers and IT associated equipment (included in component 1.2.2.4: IT systems).
	2 General office furniture, including maintenance.	item		
	3 Conference/meeting room furniture, including maintenance.			
	4 Photocopiers, including purchase/rental, maintenance and other running costs.			
	5 Canteen furniture, including maintenance.			
	6 Canteen equipment, including purchase/rental, maintenance and other running costs.			
	7 Floor coverings, including maintenance.			
	8 Water dispensers, including purchase/rental, maintenance and other running costs.			
	9 Heaters, including maintenance of heaters.			
	10 Other office equipment, including maintenance.			
	11 Removal of furniture and equipment.			
	12 Maintenance furniture and floor covering.			

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
4 IT systems	<ol style="list-style-type: none"> <li>1 Computer hardware, including purchase/rental, installation, initial set up, maintenance and running costs, such as:                             <ul style="list-style-type: none"> <li>– desktop computers and laptop computers.</li> <li>– CAD stations.</li> <li>– server and network equipment.</li> <li>– printers and plotters.</li> <li>– other computer system hardware.</li> </ul> </li> <li>2 Software and software licences.</li> <li>3 Modem lines, modems and connections (i.e. email and internet capability).</li> <li>4 WAN lines and connections (if on WAN).</li> <li>5 Line rental charges.</li> <li>6 Internet/website addresses.</li> <li>7 Internet service provider (ISP) charges.</li> <li>8 Line calls charges.</li> <li>9 IT support and maintenance.</li> </ol>	item	<ol style="list-style-type: none"> <li>1 Fixed charge.</li> <li>2 Time-related charge.</li> </ol>	<ol style="list-style-type: none"> <li>1 Computer and printer consumables (included in component 1.1.2.5: Consumables and services).</li> <li>2 Document management, including electronic data management systems (EDMS) (included in component 1.1.2.6: Brought in services).</li> </ol>
5 Consumables and services	<ol style="list-style-type: none"> <li>1 Stationery.</li> <li>2 Computer and printer consumables (e.g. ink cartridges).</li> <li>3 Postage.</li> <li>4 Courier charges.</li> <li>5 Tea, coffee, water bottles and the like.</li> <li>6 First aid consumables.</li> <li>7 Photocopier consumables (e.g. paper and toners).</li> <li>8 Fax consumables (e.g. paper and toners).</li> <li>9 Drawing printer consumables (e.g. ink cartridges).</li> </ol>	week	Time-related charge.	

Component	Included	Unit	Pricing method	Excluded
6 Brought-in services	Services outsourced by the main contractor such as: 1 Catering. 2 Equipment maintenance. 3 Document management, including management information systems and electronic data management systems (EDMS). 4 Printing (purchasing), including reports and drawings. 5 Staff transport. 6 Off-site parking charges. 7 Meeting room facilities. 8 Photographic services. 9 Other.	week	Time-related charge.	
7 Sundries	1 Main contractor's signboards. 2 Safety and information notice boards. 3 Fire points. 4 Shelters. 5 Tool stores. 6 Crane signage. 7 Employer's composite signboards.	item	Fixed charge.	

1.2.3 Temporary services

Component	Included	Unit	Pricing method	Excluded
1 Temporary water supply	1 Temporary connections.	nr	1 Fixed charge.	
	2 Distribution equipment, installation and adaptations.	item	2 Time-related charge.	
	3 Meter charges.	week		
2 Temporary gas supply	1 Gas connection.	nr	1 Fixed charge.	
	2 Distribution equipment, installation and adaptations.	item	2 Time-related charge.	
	3 Charges.	week		
	4 Bottled gas.			
3 Temporary electricity supply	1 Temporary connections.	nr	Fixed charge.	
	2 Temporary electrical supply for tower cranes.	item		
	3 Charges – power consumption for site establishment.	item	Time-related charge.	
	4 Charges – power consumption for the works.			
	5 Distribution equipment, installation and adaptations.	item	Fixed charge.	
	6 Attendance.	nr (number of man hours per week by number of weeks)	Time-related charge.	
	7 Uninterrupted power supply (UPS).	item	Fixed charge.	
	8 Temporary substation modifications.			
4 Temporary telecommunication systems	1 Landlines (including connection and rental charges), including: – telephone and fax lines – ISDN lines.	item	1 Fixed charge. 2 Time-related charge.	1 Fax consumables (included in component 1.1.2.5: Consumables and services).
	2 Telephone and facsimile equipment (including connection and rental charges), including: – PABX equipment. – handsets, including purchase or rental. – fax machines, including purchase or rental. – installation of equipment. – maintenance of equipment.			

Component	Included	Unit	Pricing method	Excluded
	3 Mobile (cellular) phones, including: – mobile phones, including purchase or rental and connection charges. – spare batteries. – mobile phone charges.			
	4 Telephone charges, including: – telephone call charges. – fax charges. – fax and telephone consumables.			
	5 Radios (including purchase or rental charges), including: – base set. – handsets and chargers. – repairs and maintenance. – licences. – spare batteries.			
5 Temporary drainage	1 Temporary mains.	item	1 Fixed charge. 2 Time-related charge.	
	2 Septic tanks.	nr		
	3 On-site treatment plant.	item		
	4 Holding tanks.	nr		
	5 Sewage pumping.			
	6 Distribution pipework, etc.	item		
	7 Drainage installation and adaptations.			
	8 Disposal charges (i.e. rates).	week	Time-related charge.	
	9 Disposal costs (i.e. tanker charges).			

TABULATED WORK SECTIONS

1.2.4 Security

Component	Included	Unit	Pricing method	Excluded
1 Security staff	1 Security guards (day and night).	nr (number of staff by number of man hours per week by number of weeks).	Time-related charge.	1 Security staff accommodation (included in section 1.1.2: Site establishment).
	2 Watchmen (day and night).			
2 Security equipment	1 Site pass issue equipment, including maintenance and removal.	item	1 Fixed charge. 2 Time-related charge.	
	2 Site pass consumables.			
	3 CCTV surveillance installation, including maintenance and removal.			
	4 Temporary vehicle control barriers, including maintenance and removal.			
3 Hoardings, fences and gates	1 Perimeter hoardings and fencing and the like to site boundaries and to form site compounds.	m	1 Fixed charge. 2 Time-related charge.	
	2 Access gates, including frames and ironmongery.	nr		
	3 Painting of hoardings, fencing, gates, and the like.	m		
	4 Temporary doors.	nr		
	5 Modification to line of hoarding and fencing during construction.			
	6 Dismantling and removal of hoarding, fencing, gates, and the like.	m		

**1.2.5 Safety and environmental protection**

Component	Included	Unit	Pricing method	Excluded
1 Safety programme	Works required to satisfy requirements of CDM Regulations:	nr (number of staff by number of man hours per week by number of weeks)	Time-related charge.	1 Health and safety manager/officers (included in section 1.2.1: Management and staff). 2 Welfare facilities (included in section 1.2.2: Site establishment).
	1 Health and safety manager/officers.			
	2 Safety audits, including safety audits carried out by external consultant.	nr	1 Fixed charge. 2 Time-related charge.	
	3 Staff safety training.	item		
	4 Site safety incentive scheme.			
	5 Notices and information to neighbours.			
	6 Personal protective equipment (PPE), including for employer and consultants.	nr (sets)		
	7 PPE for multi-service gangs.			
	8 Fire points.	nr		
	9 Temporary fire alarms.			
	10 Fire extinguishers.			
	11 Statutory safety signage.	item		
	12 Nurse.	nr (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
13 Traffic marshals.				
2 Barriers and safety scaffolding	1 Guard rails and edge protection (e.g. to edges of suspended slabs and roofs).	item	1 Fixed charge. 2 Time-related charge.	
	2 Temporary staircase balustrades (i.e. to new staircases during construction).			
	3 Lift shaft protection.			
	4 Protection to holes and openings in ground floor slabs, suspended slabs and the like.			
	5 Debris netting/plastic sheeting.			

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
3 Environmental protection measures	6 Fan protection.	item	1 Fixed charge. 2 Time-related charge.	
	7 Scaffold inspections.	nr		
	8 Hoist run-offs.	item		
	9 Protective walkways.			
	10 Other safety measures.			
	1 Control of pollution.	item	1 Fixed charge. 2 Time-related charge.	
	2 Residual control of noise.			
	3 Environmental monitoring.			
	4 Environmental manager/consultant.	nr (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
	5 Environmental audits, including safety audits carried out by external consultant.	nr	1 Fixed charge. 2 Time-related charge.	

1.2.6 Control and protection

Component	Included	Unit	Pricing method	Excluded
1 Survey, inspections and monitoring	1 Surveys.	item	1 Fixed charge. 2 Time-related charge.	1 Environmental monitoring (included in section 2.2.5: Safety and environmental protection).
	2 Topographical survey.			
	3 Non-employer dilapidation survey.			
	4 Structural/dilapidations survey adjoining buildings.			
	5 Environmental surveys.			
	6 Movement monitoring.			
	7 Maintenance and inspection costs.			

Component	Included	Unit	Pricing method	Excluded
2 Setting out	1 Setting out primary grids.	item	1 Fixed charge. 2 Time-related charge.	
	2 Grid transfers and level checks.			
	3 Maintenance of grids.			
	4 Take over control and independent checks (i.e. on change of subcontractors).			
	5 Instruments for setting out.			
3 Protection of works	1 Protection of finished works to project handover:	item	1 Fixed charge. 2 Time-related charge.	
	2 Protection of stairs, balustrades and the like works to project handover.			
	3 Protection of fittings and furnishings works to project handover.			
	4 Protection of entrance doors and frames works to project handover.			
	5 Protection of lift cars and doors works to project handover.			
	6 Protection of specifically vulnerable products to project handover.			
	7 Protection of all sundry items.			
4 Samples	1 Provision of samples.	item	1 Fixed charge. 2 Time-related charge.	
	2 Provision of sample room.			
	3 Mock-ups and sample panels.			
	4 Testing of samples/mock-ups, including testing fees.			
	5 On-site laboratory equipment.			
	6 Mock-ups of prefabricated units (e.g. residential units, student accommodation units, hotel accommodation and the like).			
5 Environmental control of building	1 Dry out building.	item	1 Fixed charge. 2 Time-related charge.	
	2 Temporary heating/cooling.			
	3 Temporary waterproofing, including over roofs.			
	4 Temporary enclosures.			

TABULATED WORK SECTIONS

1.2.7 Mechanical plant

Component	Included	Unit	Pricing method	Excluded
1 Generally	Common user mechanical plant and equipment used in construction operations.			Plant and equipment used for specific construction operations, such as: 1 Earthmoving plant. 2 Piling plant. 3 Paving and surfacing plant. 4 Wheel spinners, and road sweepers (included in section 1.2.11: Cleaning). 5 Access scaffolding (included in section 1.2.8: Temporary works).
2 Tower cranes	Type of craneage to be provided shall be stated; with each type separately quantified.	week	Time-related charge.	1 Temporary electrical supply to tower crane (included in section 1.2.3: Temporary services).
	1 Hire charges.			
	2 Crane operator:	week (number of staff by number of man hours per week by number of weeks)		
	3 Overtime for crane and operator:			
	4 Piles for tower crane bases, including maintenance removal.	nr	1 Fixed charge. 2 Time-related charge.	
	5 Temporary bases for tower cranes, including anchors, maintenance; removal and reinstatement on completion (size, in m <sup>2</sup> , to be stated).			
	6 Ties.	week	Time-related charge.	
	7 Connections to temporary electrical supply.	nr	Fixed charge.	
	8 Bring to site, erection, test and commission.			
	9 Periodic safety checks/inspections.	week	Time-related charge.	
10 Dismantling and removing from site.	nr	Fixed charge.		

Component	Included	Unit	Pricing method	Excluded
3 Mobile cranes	11 Other costs specific to tower crane such as: – chain pack and sundries – relief operator – banksman – man cage.	item	1 Fixed charge. 2 Time-related charge.	
	12 Temporary voids in building structure for craneage, hoists and the like including filling voids after removal.	nr	Fixed charge.	
	Type of craneage to be provided shall be stated; with each type separately quantified. 1 Mobile crane hire charges, including driver/operator charges. 2 Attendance.	week nr (number of man hours per visit by number of visits) item	1 Fixed charge. 2 Time-related charge.	
4 Hoists	3 Other costs specific to mobile crane hire.	item		
	Type of hoist to be provided shall be stated; with each type separately quantified.	week	Time-related charge.	1 Temporary services to hoist installations (included in section 1.2.3: Temporary services).
	1 Goods and passenger hoists, including protection cages and embedment frames.	week	Time-related charge.	
	2 Hoist bases.	nr	1 Fixed charge. 2 Time-related charge.	
	3 Bringing to site, erecting, testing and commissioning.	nr	Fixed charge.	
	4 Dismantling and removing from site.	nr	Fixed charge.	
	5 Protection systems.	item	1 Fixed charge. 2 Time-related charge.	
6 Hoist operator, including overtime.	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.		
7 Beam hoists.	item	1 Fixed charge. 2 Time-related charge.		

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
	8 Periodic safety checks/inspections.	month	Time-related charge.	
	9 Other costs specific to temporary hoist installations.	item	1 Fixed charge. 2 Time-related charge.	
5 Access plant	1 Folk lifts.	week	1 Fixed charge. 2 Time-related charge.	
	2 Scissor lifts.			
	3 Loading platforms.			
	4 Maintenance of mechanical access equipment.			
	5 Other costs specific to mechanical access equipment.			
6 Concrete plant	1 Concrete plant.	week	1 Fixed charge. 2 Time-related charge.	1 Temporary service to concrete plant (included in section 1.2.3: Temporary services).
	2 Plant operator.	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
	3 Overtime for plant and operator.			
	4 Bases for concrete plant.	nr	1 Fixed charge. 2 Time-related charge.	
	5 Power connections, including cabling and statutory undertaker's charges for temporary connection to their supply.	nr	1 Fixed charge. 2 Time-related charge.	
	6 Bring to site, erection, test and commission.	nr	Fixed charge.	
	7 Maintenance of concrete plant.	week	Time-related charge.	
	8 Dismantling and removing from site.	nr	Fixed charge.	

Component	Included	Unit	Pricing method	Excluded
7 Other plant	1 Small plant and tools.	week	Time-related charge.	

**1.2.8 Temporary works**

Component	Included	Unit	Pricing method	Excluded			
1 Access scaffolding	Common user access scaffolding (type of access scaffolding to be specified): <ul style="list-style-type: none"> <li>- access scaffolding to elevations, lift shafts and the like, including: fans and mesh screens.</li> <li>- structural scaffolding (e.g. to party walls).</li> <li>- birdcage scaffolding.</li> <li>- cantilever access scaffolding.</li> <li>- staircase platforms.</li> <li>- primary loading platforms.</li> <li>- travelling access platforms.</li> </ul>	nr	Fixed charge.	1 Scaffolding specific to works packages (included in appropriate element or sub-element). 2 Scaffold inspections (included in sub-element 1.2.5: Safety and environmental protection).			
					1 Bringing to site, erecting and initial safety checks.		
					2 Hire charges.	week	Time-related charge.
					3 Altering and adapting during construction.	nr	Fixed charge.
4 Dismantling and removing from site.							

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded	
2 Temporary works	Common user temporary works: <ul style="list-style-type: none"> <li>- support scaffolding and propping.</li> <li>- crash decks.</li> <li>- temporary protection to existing trees and/or vegetation.</li> <li>- floodlights.</li> </ul> 1 Bringing to site, erecting and initial safety checks.	nr	Fixed charge.	1 Temporary works design (included in section 1.1.1: Management and staff). 2 Temporary bases, drainage and services to site accommodation (included in section 1.2.2: Site establishment). 3 Temporary roads, paths and pavement, including on-site car parking (included in section 1.2.2: Site establishment (i.e. Builder's work in connection with site accommodation)). 4 Hoardings, fans, fencing and the like to site boundaries and to form site compounds (included in section 1.2.4: Security (hoardings, fences and gates)). 5 Temporary earthwork support basement excavations. 6 Temporary props and walings to support contiguous bored pile wall of basement excavations. 7 Traffic management, including traffic marshals and temporary traffic lights (included in section 1.2.5: Safety and environmental protection).	
					week
		3 Altering and adapting during construction.	nr	Fixed charge.	
		4 Dismantling and removing from site.			

**1.2.9 Site records**

Component	Included	Unit	Pricing method	Excluded
1 Site records	Unless otherwise indicated, costs associated with the following shall be deemed to be included in management and staff costs: <ul style="list-style-type: none"> <li>1 Photography:                             <ul style="list-style-type: none"> <li>- camera purchase.</li> <li>- consumables.</li> <li>- printing and presentation.</li> </ul> </li> </ul>	item	1 Fixed charge. 2 Time-related charge.

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
3 Post-completion services	1 Supervisory staff (employer/tenant care).	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
	2 Handyman.	item	Fixed charge.	
	3 Minor materials and sundry items.			
	4 Insurances.			
	5 Other post-construction staff.	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	

1.2.11 Cleaning

Component	Included	Unit	Pricing method	Excluded
1 Site tidy	1 Cleaning site accommodation – internal, including cleaning telephone handsets, other office furniture and equipment and window cleaning.	week	Time-related charge.	
	2 Periodic maintenance of site accommodation, including redecoration (internal and external).			
	3 Waste management, including rubbish disposal (including compactor visits; skips and waste bins; roll-off, roll-on waste bins) and other disposal.			
	4 Pest control.			
2 Maintenance of roads, paths and pavings	1 Maintenance of temporary site roads, paths, and pavements.	week	Time-related charge.	
	2 Maintenance of public and private roads, including wheel spinners and road sweepers.			
3 Building clean	1 Final builder's clean.	item	Fixed charge.	

**1.2.12 Fees and charges**

Component	Included	Unit	Pricing method	Excluded
1 Fees	1 Building control fees, where not paid by the employer.	item	1 Fixed charge. 2 Time-related charge.	1 Building control fees, where paid by the employer. 2 Oversailing fees, where paid by the employer. 3 Scheme registration fees or similar fees, where paid by the employer.
	2 Oversailing fees, where not paid by the employer.			
	3 Considerate Constructors' Scheme fees (or alternative scheme operated by local authority).			
	4 Scheme registration fees or similar fees, where not paid by the employer.			
2 Charges	1 Rates on temporary accommodation.	week	Time-related charge.	1 Statutory undertaker's charges in connection with permanent services to the building. 2 Statutory undertaker's charges in connection with temporary services.
	2 Licences in connection with hoardings, scaffolding, gantries and the like.	item	1 Fixed charge.	
	3 Licences in connection with crossovers, parking permits, parking bay suspensions and the like.		2 Time-related charge.	

**1.2.13 Site services**

Component	Included	Unit	Pricing method	Excluded
1 Temporary works	1 Temporary works that are not specific to an element.	item/hr/m <sup>2</sup> /m <sup>3</sup>	1 Fixed charge. 2 Time-related charge.	1 Temporary screens in connection with minor demolition works and alteration works. 2 Supports to small openings cut into existing walls or after removal of internal walls or the like in connection with minor demolition works and alteration works. 3 Temporary or semi-permanent support for unstable structures or facades – facade retention works (i.e. structures not to be demolished).

Component	Included	Unit	Pricing method	Excluded
2 Multi-service gang	1 Ganger:	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
	2 Labour:			
	3 Fork lift driver:			
	4 Service gang plant and transport.			

**1.2.14 Insurance, bonds, guarantees and warranties**

Component	Included	Unit	Pricing method	Excluded
1 Works insurance	1 Contractor's 'all risks' (CAR) insurance.	item	1 Fixed charge. 2 Time-related charge.	
	2 Contractor's plant and equipment insurance.			
	3 Temporary buildings insurance.			
	4 Terrorism insurance.			
	5 Other insurances in connection with the works.			
	6 Insurance premium tax (IPT).			
	7 Allowance for recovery of all or part of insurance premium excess.			
2 Public liability insurance	1 Non-negligence insurance.	item	1 Fixed charge. 2 Time-related charge.	
	2 Professional indemnity insurance.			
	3 Insurance premium tax (IPT).			
	4 Allowance for recovery of all or part of insurance premium excess.			
3 Employer's (main contractor's) liability insurance	1 Management and staff, including administrative staff.	item	1 Fixed charge. 2 Time-related charge.	
	2 Works operatives.			
	3 Insurance premium tax (IPT).			
	4 Allowance for recovery of all or part of insurance premium excess.			

Component	Included	Unit	Pricing method	Excluded
4 Other insurances	1 Employer's loss of liquidated damages.	item	1 Fixed charge. 2 Time-related charge.	
	2 Latent defects cover:			
	3 Motor vehicles.			
	4 Other insurances.			
	5 Insurance premium tax (IPT).			
	6 Allowance for recovery of all or part of insurance premium excess.			
5 Bonds	1 Tender bonds (if applicable).	item	1 Fixed charge. 2 Time-related charge.	
	2 Performance bonds.			
6 Guarantees	1 Parent company guarantees.	item	1 Fixed charge. 2 Time-related charge.	
	2 Product guarantees, insurance backed guarantees.			
7 Warranties	1 Collateral warranties.	item	1 Fixed charge. 2 Time-related charge.	
	2 Funder's warranties.			
	3 Purchaser's and tenant's warranties.			
	4 Other warranties.			

# I Preliminaries (works package contract)

## Part A: Information and requirements

### I.1 Project particulars

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Project particulars.	1 The project.	Short project title.	
	2 Nature of work package works.	Short description to be stated.	
	3 Location of project.	Full postal address to be stated.	
	4 Length of work package contract/sub-contract.	Period, in weeks, to be stated.	Where to be stated by the contractor, insert 'to be confirmed'.
	5 Names, addresses and points of contact of contractor, employer and consultants.	As for Preliminaries (main contract).	

### I.2 Drawings and other documents

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Drawings	1 List of drawings from which the bill of quantities was prepared.	As for Preliminaries (main contract).	Exceptions to be stated.
	2 Other documents	As for Preliminaries (main contract).	

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
	2 List of drawings and other documents relating to the work package or sub-contract but not included in the tender documents.	(1) Provide list of drawings and other documents relating to the work package or sub-contract but not included in the tender documents, which may be seen by the contractor during the tender period. (2) Document title, reference, revision, date of issue and author to be stated. (3) Details of where documents can be seen to be stated.	

### 1.3 The site and existing buildings

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 The site		(1) As for Preliminaries (main contract).	Cross reference to main contractor's preliminaries.
2 Existing buildings on or adjacent to the site		(2) Additional details relevant to the work package.	
3 Existing mains services	1 On the site. 2 Adjacent to the site.	As for Preliminaries (main contract).	
4 Health and safety hazards		As for Preliminaries (main contract).	
5 Site visits		Arrangements for site visits.	Include where information not given in the 'Conditions of Tender'.

### 1.4 Description of the Works

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 The Works		Description of the Works (or entire building project).	
2 Preparatory work by others		Description of any work that will be carried out by others under a separate contract before the start of work on site for this contract.	

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
3 Subcontract work		Description for the works comprising the works package.	
4 Completion work by others			

**1.5 The contract conditions**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Conditions of contract	1 [Form of contract title to be stated]	(1) Full title of the standard or bespoke form of contract/sub-contract, including edition, revision, and standard amendments applicable. (2) Reference to any amendments to clauses/conditions to standard form of contract/sub-contract (see note (1)). (3) Reference to any supplementary or special clauses/conditions to standard form of contract/sub-contract.	(1) Where bespoke or uncommon forms of contract are used, a copy is to be appended to the bill of quantities or included as part of the tender.

**1.6 Provision, content and use of documents**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Definitions and interpretations	1 Definitions.	As for Preliminaries (main contract).	
	2 Communication.		
	3 Products.		
	4 Site equipment.		
	5 Drawings.		
	6 Contractor's choice.		
	7 Contractor's designed works		
	8 Submit proposals.		
	9 Terms used in specification.		

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
	<ul style="list-style-type: none"> <li>10 Manufacturer and product references.</li> <li>11 Substitution of products.</li> <li>12 Cross-references.</li> <li>13 Referenced documents.</li> <li>14 Equivalent products.</li> <li>15 Substitution of standards.</li> <li>16 Currency of documents.</li> <li>17 Product sizes.</li> </ul>		
2 Documents provided on behalf of employer	<ul style="list-style-type: none"> <li>1 Additional copies of drawings and documents.</li> <li>2 Dimensions.</li> <li>3 Measured quantities</li> <li>4 The specification.</li> <li>5 Divergence from the statutory requirements.</li> <li>6 Employer's policy documents.</li> </ul>	As for Preliminaries (main contract).	
3 Documents provided by the contractor, subcontractors and suppliers	<ul style="list-style-type: none"> <li>1 Design and production information.</li> <li>2 Drawn and other information.</li> <li>3 As-built/installed drawings and information.</li> <li>4 Technical literature»</li> <li>5 Maintenance instructions and guarantees.</li> <li>6 Code for Sustainable Homes.</li> <li>7 Environmental assessment method.</li> </ul>	As for Preliminaries (main contract).	

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
4 Document and data interchange	1 Electronic data interchange (EDI).	As for Preliminaries (main contract).	

### 1.7 Management of the works

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Employer's requirements – generally	1 Insurance.	As for Preliminaries (main contract).	
	2 Professional indemnity insurance	Specific requirements.	
	3 Insurance claims.	As for Preliminaries (main contract).	
	1 Programme.	As for Preliminaries (main contract).	
2 Programme/progress	2 Revised programme.		
	3 Commencement of work on site.		
	4 Work package contractor's progress report.		
	1 Removal/replacement of existing work.	As for Preliminaries (main contract).	
3 Cost control	2 Proposed instructions.		
	3 Measurement of covered work.		
	4 Daywork vouchers.		
	5 Interim valuations and payments.		
	6 Payment for products not incorporated into the works.		
	7 Payment for products stored off-site.		
	1 General attendances	Details of general attendances provided by the main contractor.	
4 Attendances	2 Special attendances.	method of dealing with work package contractor's additional requirements.	

**1.8 Quality standards and quality control**

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Standards of products and executions	1 Incomplete information. 2 Workmanship skills. 3 Quality of products. 4 Quality of execution. 5 Compliance. 6 Inspections 7 Manufacturer's recommendations/instructions.	As for Preliminaries (main contract).	
2 Samples/approvals	1 Samples.	As for Preliminaries (main contract).	
3 Accuracy/setting out	1 Accuracy of instruments. 2 Setting out. 3 Appearance and fit. 4 Critical dimensions. 5 Levels of structural floors. 6 Record drawings.	As for Preliminaries (main contract).	
4 Services	1 Services regulations. 2 Water regulations/byelaws notification. 3 Water regulations/byelaws contractor's certificate. 4 Electrical installation certificate. 5 Gas, oil and solid fuel appliance installation certificate. 6 Mechanical and electrical services.	As for Preliminaries (main contract).	
5 Supervision/inspection/ defective work	1 Supervision. 2 Defects in existing work.	As for Preliminaries (main contract).	

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
	<ul style="list-style-type: none"> <li>3 Proposals for rectification of defective products/executions.</li> <li>4 Proposals for rectification of defective products/executions.</li> <li>5 Quality control.</li> </ul>		
6 Work at or after completion	<ul style="list-style-type: none"> <li>1 Commissioning and testing.</li> </ul>	Specific requirements.	

### 1.9 Security, safety and protection

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Security/health and safety	<ul style="list-style-type: none"> <li>1 Pre-construction information.</li> <li>2 Execution hazards.</li> <li>3 Product hazards.</li> <li>4 Occupied premises.</li> <li>5 Passes.</li> <li>6 Occupier's rules and regulations.</li> <li>7 Use of mobile telephones.</li> <li>8 Working precautions/ restrictions.</li> </ul>	As for Preliminaries (main contract).	
2 Protection against	<ul style="list-style-type: none"> <li>1 Noise control.</li> <li>2 Pollution control.</li> <li>3 Fuels, lubricants and hydraulic fluids.</li> <li>4 Nuisance.</li> <li>5 Asbestos containing materials (ACM)s.</li> <li>6 Antiquities.</li> <li>7 Fire prevention.</li> <li>8 Smoking on site.</li> <li>9 Moisture.</li> </ul>	As for Preliminaries (main contract).	

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
3 Protection	10 Infected timber/contaminated materials.	As for Preliminaries (main contract).	
	11 Waste.		
	12 Electromagnetic interference.		
	1 Existing features.	As for Preliminaries (main contract).	
	2 Existing work.		
	3 Building interiors.		
4 Existing structures			
5 Materials for recycling and/or reuse.			
6 Protection of work package contractor's work.	Specific requirements.		

### 1.10 Specific limitations on method, sequence and timing

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes	
1 Generally		As for Preliminaries (main contract).		
				2 Use or disposal of materials
				3 Working hours
		Specific requirements.		

### 1.11 Site accommodation/services/facilities/temporary works

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Services and facilities	1 Lighting and power.	As for Preliminaries (main contract).	
	2 Gas.		
	3 Water.		
	4 Mobile telephones.		

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
2 Temporary works	5 Temperature and humidity.		
	6 Beneficial use of permanent installed systems.		
	7 Meter readings.		
	8 Other requirements.		
	1 Name boards.	Specific requirements.	
	2 Advertising.	Specific requirements.	
	3 Other requirements.		

### 1.12 Operation/maintenance of finished building

Sub-heading 1	Sub-heading 2	Information requirements	Supplementary information/notes
1 Operation and maintenance manual	1 Generally.	As for Preliminaries (main contract).	The operation and maintenance information, the health and safety file, and all other information can be combined as a single document. In this case, the document can be referred to as the 'building manual'.
	2 Content.		
2 Operation and maintenance manual information		Specify information and documents to be provided.	
3 Health and safety file	1 Generally.	As for Preliminaries (main contract).	
	2 Content.		
4 Health and safety information		Specify information and documents to be provided.	
		Specific requirements.	
5 Other information			

## I Preliminaries (works package contract)

### Part B: Pricing schedule

#### I.1 Management and staff

Component	Included	Unit	Pricing method	Excluded
1 Project specific management and staff	Work package contractor's project-specific management and staff.	week (number of staff by number of man hours per week by number of weeks)		
2 Staff travel	Costs associated with off-site visits such as: 1 Visits to employer's and consultant's offices. 2 Visits to main contractors' offices/works. 3 Overseas visits. 4 Accommodation charges and overnight expenses.	nr (number of occasions)	Fixed charge.	

#### I.2 Site establishment

Component	Included	Unit	Pricing method	Excluded
1 Site accommodation	Work package contractor's project-specific site accommodation. Type and extent of accommodation to be provided to be stated; with each type separately quantified.. 1 Purchase charges. 2 Hire charges. 3 Delivery of temporary site accommodation to site, erection, construction and removal. 4 Intruder alarms. 5 Land/property rental where site accommodation located off-site.	item week item week	Fixed charge. Time-related charge. Fixed charge. Time-related charge.	

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
2 Temporary works in connection with site establishment	6 Alterations and adaptations to site accommodation, including partitioning, doors, painting and decorating, and the like.	item	Fixed charge.	
	7 Relocation and alterations of temporary accommodation during construction stage.			
	8 Removal of site accommodation and temporary works in connection with site accommodation.			
2 Temporary works in connection with site establishment	1 Temporary bases and foundations for site accommodation, including maintenance and reinstatement of existing surfaces on completion of the works.	m <sup>2</sup>	1 Fixed charge. 2 Time-related charge.	
	2 Connections to temporary service, including maintenance and removal on completion of the works	nr		
	3 Connections to temporary drainage, in including maintenance and removal on completion of the works.			
3 Furniture and equipment	1 Workstations for staff.	nr	1 Fixed charge. 2 Time-related charge.	
	2 General office furniture.	item		
	3 Floor coverings.			
	4 Heaters, including maintenance of heaters.			
	5 Other office equipment, including maintenance.			
	6 Removal of furniture and equipment.			
	7 Maintenance of furniture and floor covering.			

Component	Included	Unit	Pricing method	Excluded
4 IT systems	<ol style="list-style-type: none"> <li>1 Computer hardware, including purchase/rental, installation, initial set up, maintenance and running costs, such as:                             <ul style="list-style-type: none"> <li>– desktop computers and laptop computers</li> <li>– CAD stations</li> <li>– server and network equipment</li> <li>– printers and plotters</li> <li>– other computer system/hardware.</li> </ul> </li> <li>2 Software and software licences.</li> <li>3 Modem lines, modems and connections (i.e. email and internet capability).</li> <li>4 WAN lines and connections (if on WAN).</li> <li>5 Line rental charges.</li> <li>6 Internet/website addresses.</li> <li>7 Internet service provider (ISP) charges.</li> <li>8 Line calls charges.</li> <li>9 IT support and maintenance.</li> </ol>	item	<ol style="list-style-type: none"> <li>1 Fixed charge.</li> <li>2 Time-related charge.</li> </ol>	
5 Consumables and services	<ol style="list-style-type: none"> <li>1 Stationery.</li> <li>2 Computer and printer consumables (e.g. ink cartridges).</li> <li>3 Postage.</li> <li>4 courier charges.</li> <li>5 Tea, coffee, water bottles, etc.</li> <li>6 First aid consumables.</li> <li>7 Photocopier consumables (e.g. paper and toners).</li> <li>8 Fax consumables (e.g. paper and toners).</li> <li>9 Drawing printer consumables (e.g. ink cartridges).</li> </ol>	week	Time-related charge.	

Component	Included	Unit	Pricing method	Excluded
6 Sundries	1 Work package contractor's signboards.	item	Fixed charge.	

### 1.3 Temporary services

Component	Included	Unit	Pricing method	Excluded
1 Temporary water supply	1 Temporary connections. 2 Distribution equipment, installation and adaptations. 3 Meter charges.	nr item week	1 Fixed charge. 2 Time-related charge.	
2 Temporary gas supply	1 Gas connection. 2 Distribution equipment, installation and adaptations. 3 Charges. 4 Bottled gas.	nr item week	1 Fixed charge. 2 Time-related charge.	
3 Temporary electricity supply	1 Temporary connections.	nr	Fixed charge.	
4 Temporary telecommunication system	1 Landlines (including connection and rental charges), including: – telephone and fax lines – ISDN lines. 2 Telephone and facsimile equipment (including connection and rental charges) including: – PABX equipment – handsets, including purchase or rental – fax machines, including purchase or rental – installation of equipment – maintenance of equipment. 3 Mobile (cellular) phones, including: – mobile phones, including purchase or rental and connection charges – spare batteries – mobile phone charges .	item	1 Fixed charge. 2 Time-related charge.	1 Fax consumables (included in section 1.2.5: Consumables and services).

Component	Included	Unit	Pricing method	Excluded
	<p>4 Telephone charges, including:</p> <ul style="list-style-type: none"> <li>– telephone call charges</li> <li>– fax charges</li> <li>– fax and telephone consumables.</li> </ul> <p>5 Radios (including purchase or rental charges), including:</p> <ul style="list-style-type: none"> <li>– base set</li> <li>– handsets and chargers</li> <li>– repairs and maintenance</li> <li>– licences</li> <li>– spare batteries.</li> </ul>			

**1.4 Control and protection**

Component	Included	Unit	Pricing method	Excluded
1 Survey, inspections and monitoring	<ol style="list-style-type: none"> <li>1 Surveys.</li> <li>2 Topographical survey.</li> <li>3 Non-employer dilapidation survey</li> <li>4 Structural/dilapidations survey adjoining buildings.</li> <li>5 Environmental surveys.</li> <li>6 Movement monitoring.</li> <li>7 Maintenance and inspection costs.</li> </ol>	item	<ol style="list-style-type: none"> <li>1 Fixed charge</li> <li>2 Time-related charge.</li> </ol>	<ol style="list-style-type: none"> <li>1 Environmental monitoring (included in section 1.2.5: Safety and environmental protection)</li> </ol>
2 Setting out	<ol style="list-style-type: none"> <li>1 Setting out primary grids.</li> <li>2 Grid transfers and level checks.</li> <li>3 Maintenance of grids.</li> <li>4 Take over control and independent checks (i.e. on change of subcontractors).</li> <li>5 Instruments for setting out.</li> </ol>	item	<ol style="list-style-type: none"> <li>1 Fixed charge.</li> <li>2 Time-related charge.</li> </ol>	

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
3 Protection of Works	1 Protection of finished works to project handover.	item	1 Fixed charge. 2 Time-related charge.	
	2 Protection of stairs, balustrades and the like to project handover.			
	3 Protection of fittings and furnishings to project handover.			
	4 Protection of entrance doors and frames to project handover.			
	5 Protection of lift cars and doors to project handover.			
	6 Protection of specifically vulnerable products to project handover.			
	7 Protection of all sundry items.			
4 Samples	1 Provision of samples.	item	1 Fixed charge. 2 Time-related charge.	
	2 Provision of sample room.			
	3 Mock-ups and sample panels.			
	4 Testing of samples/mock-ups, including testing fees.			
	5 On-site laboratory equipment.			
	6 Mock-ups of complete units (e.g. residential units, student accommodation units, hotel accommodation and the like).			
5 Environmental control of building	1 Dry out building.	item	1 Fixed charge. 2 Time-related charge.	
	2 Temporary heating/cooling.			
	3 Temporary waterproofing, including over roofs.			
	4 Temporary enclosures.			

### 1.5 Mechanical plant

Component	Included	Unit	Pricing method	Excluded
1 Mechanical plant	Type of plant to be provided shall be stated; with each type separately quantified.			
	1 Bases.	nr	1 Fixed charge. 2 Time-related charge.	
	2 Bringing to site, erecting, testing and commissioning.	nr	Fixed charge.	
	3 Dismantling and removing from site.			
	4 Protection systems.	item	1 Fixed charge. 2 Time-related charge.	
	5 Operator/driver, including overtime.	week (number of staff by number of man hours per week by number of weeks)	Time-related charge.	
	6 Periodic safety checks/inspections.	month	Time-related charge.	
7 Other costs' specific charges.	item	1 Fixed charge. 2 Time-related charge.		

### 1.6 Temporary works

Component	Included	Unit	Pricing method	Excluded
1 Access scaffolding	Access scaffolding specifically required by work package contractor (type of access scaffolding to be specified):			
	– access scaffolding to elevations, lift shafts and the like, including: fans and mesh screens.			
	– structural scaffolding (e.g. to party walls).			
	– birdcage scaffolding.			
	– cantilever access scaffolding.			
	– staircase platforms.			
	– primary loading platforms.			
	– travelling access platforms.			
	1 Bringing to site, erecting and initial safety checks.	nr	Fixed charge.	
	2 Hire charges.	week	Time-related charge.	
	3 Altering and adapting during construction.	nr	Fixed charge.	
	4 Dismantling and removing from site.			

TABULATED WORK SECTIONS

Component	Included	Unit	Pricing method	Excluded
2 Temporary works	Temporary works specifically required by work package contractor: <ul style="list-style-type: none"> <li>– support scaffolding and propping</li> <li>– crash decks</li> <li>– temporary protection to existing trees and/or vegetation</li> <li>– floodlights.</li> </ul>	nr	Fixed charge.	
		nr	Time-related charge.	
		nr	Fixed charge.	
	1 Bringing to site, erecting and initial safety checks. 2 Hire charges. 3 Altering and adapting during construction. 4 Dismantling and removing from site.			

**1.7 Site records**

Component	Included	Unit	Pricing method	Excluded
1 Site records	Unless otherwise indicated, costs associated with the following shall be deemed to be included in management and staff costs: <ul style="list-style-type: none"> <li>1 Photography:                             <ul style="list-style-type: none"> <li>– Camera purchase</li> <li>– Consumables</li> <li>– Printing and presentation</li> </ul> </li> </ul>	item	1 Fixed charge. 2 Time-related charge.	

Component	Included	Unit	Pricing method	Excluded
	<ul style="list-style-type: none"> <li>2 Works records:                             <ul style="list-style-type: none"> <li>– Progress reporting</li> <li>– Site setting out drawings</li> <li>– Condition surveys and reports</li> <li>– Operation and maintenance manuals</li> <li>– as-built/installed drawings and schedules</li> <li>– co-ordinating, gathering and compiling health and safety information and presentation to CDM co-ordinator</li> <li>– compilation of health and safety file (if required).</li> </ul> </li> </ul>			

**1.8 Completion and post-completion requirements**

Component	Included	Unit	Pricing method	Excluded
<ul style="list-style-type: none"> <li>1 Testing and commissioning plan</li> </ul>	<ul style="list-style-type: none"> <li>Costs associated with the following shall be deemed to be included in section 1.1: Management and staff costs:                             <ul style="list-style-type: none"> <li>1 Preparation of commissioning plan.</li> </ul> </li> </ul>	item	<ul style="list-style-type: none"> <li>1 Fixed charge.</li> <li>2 Time-related charge.</li> </ul>	<ul style="list-style-type: none"> <li>1 Testing and commissioning of services</li> </ul>

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
7 Extra over all types of excavation irrespective of depth— <i>cont.</i>	m	3 Excavating alongside existing underground services.	1 Type, size and depth of service stated.	1 Nature of precaution required.	1 These items are measured where there is a risk of the existing service being affected by the excavation process. The method of protection is left to the discretion of the contractor. 2 If in doubt the surveyor must measure an item giving the nature of the live service.
	nr	4 Excavating across existing underground services			
8 Support to face(s) of excavation where not at the discretion of the contractor	m <sup>2</sup>	1 Maximum depth stated.	1 Location stated.	1 Method of forming support where not left to discretion of the contractor.	1 This work shall only be measured where it has been specifically specified in the contract documents or if the contractor has been instructed by the contract administrator to provide the support during the course of the works.
9 Disposal	item	1 Ground water.	1 Depth below original ground level stated. 2 Polluted water described if known.	1 If the post-contract water level differs from the pre-contract level the measurements must be revised accordingly.	1 The method and place of discharge left to the discretion of the contractor unless stated otherwise.
		2 Excavated material off site.	1 Destination if not at the contractor's discretion. 2 Hazardous material. 3 Non-hazardous material where it requires to be disposed to a specific location.		1 Irrespective of where excavated material originates.
10 Retaining excavated material on site	m <sup>3</sup>	1 Top soil. 2 All other excavated material.	1 To temporary spoil heaps. 2 Average distance to spoil heap stated.	1 Specified handling; details stated.	1 If the distance to spoil heap is not stated the location is left to the discretion of the contractor.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
11 Filling obtained from excavated material	m <sup>2</sup>	1 Final thickness of filling not exceeding 500mm deep, finished thickness stated.	1 Source, distance, destination and method stated. 2 Maximum or average depth of layers stated.	1 Treatment of material prior to depositing in final location.	1 This includes topsoil and any other material arising from the excavations that have been specified to remain on site. 2 The thickness stated will be that after compaction. 3 Destinations will comprise general areas to make up levels, backfilling foundations, landscaping areas, planter beds and the like. 4 Compacting layers and surfaces are deemed included irrespective of depth and number of layers. 5 Source will be either direct from excavations or from temporary spoil heaps.
12 Imported filling	m <sup>3</sup>	1 Blinding bed not exceeding 50mm thick, finished thickness stated.	1 Level, to falls, cross falls or cambers, stated. 2 Sloping not exceeding 15° from horizontal. 3 Sloping over 15° from horizontal.	1 Destination stated. Maximum or average depth of layers stated.	1 All types of surface treatments are deemed included. 2 The thickness stated will be that after compaction. 3 Compacting layers and surfaces are deemed included irrespective of depth and number of layers.
	m <sup>3</sup>	2 Beds over 50mm thick but not exceeding 500mm deep, finished thickness stated.			
	m <sup>3</sup>	3 Beds exceeding 500mm deep.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
8 Pressure grouting/ground permeation	m <sup>2</sup>	1 Area and depth of site to be treated.	1 Details stated.		
9 Compacting	m <sup>2</sup>	1 Area of site to be treated 2 Weight of compactor	1 Details stated.		
10 Stabilising soil in situ by incorporating cement with a rotavator	m <sup>2</sup>	1 Area of site to be treated 2 Grams/m <sup>2</sup> of cement.	1 Details stated.		

## 7 Piling

- Bored piling
- Driven piling
- Interlocking piling
- Vibro-compacted stone piling

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Site plan showing site boundary and any adjacent buildings or features that might affect or be affected by the piling.</li> <li>2 General piling layout.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Types of piles.</li> <li>2 Nature of the ground.</li> <li>3 Ground water level(s) and date(s) established.</li> <li>4 Commencing levels from which work is expected to begin.</li> <li>5 Limitations on headroom.</li> <li>6 Kind and quality of materials.</li> <li>7 Types of tests.</li> <li>8 Type of grout.</li> <li>9 Details of compaction.</li> </ol>	<p><b>Notes, comments and glossary</b></p> <ol style="list-style-type: none"> <li>1 Irregular ground levels must be stated.</li> <li>2 Features that might affect piling include rivers, canals, tidal waters, flood areas and the like sufficiently close to the works that their situation may affect the piling process.</li> </ol>
<p>Minimum information that must be shown on the drawings that accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Positions of piles.</li> <li>2 Positions of existing buildings adjacent to the site.</li> <li>3 Position of existing services.</li> </ol>	<p><b>Works and materials deemed included.</b></p>	<ol style="list-style-type: none"> <li>1 Temporary containment of spoil.</li> <li>2 Any concrete placed in excess of the designed completed length.</li> <li>3 Backfilling empty bores.</li> <li>4 All pre-boring.</li> <li>5 Re-positioning piling plant during the works</li> <li>6 Maintaining all piling plant.</li> </ol>	

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Interlocking sheet piles	m <sup>2</sup>	1 Total driven area, maximum length stated.	1 Section modulus and cross section size, or section reference stated.	1 Removal to be stated if not left to discretion of contractor.	1 The cost of extraction is deemed included.
2 Bored piles	m	1 Type stated.	1 Contiguous/secant piling shall be so described.	1 Reinforcement to precast concrete piles.	1 Lengths are measured along the axes of the piles from the commencing level to the bottom of the pile.
3 Driven piles		2 Nominal size or diameter stated.	2 Permanent casings shall be stated.		
4 Other type stated		3 Total bored or driven length: maximum length stated.	3 Raking, inclination stated.		
		4 Total concreted length.			
		5 Total number.			
5 Vibro-compacted piles	m	1 Nominal diameter.			
		2 Total number.			
6 Vibro-compacted trench fill	m	1 Nominal width and depth stated.			
7 Extra over piling	m	1 Enlarged bases.	1 Type of piling stated.		1 This work is deemed to include everything necessary to form the enlargement including disposal of additional spoil.
		2 Enlarged heads.	2 Diameter or size of enlargement stated.		
		3 Pile extensions.	1 Total number stated.		1 Preparing head of pile to receive extension is deemed included.
8 Reinforcement to in-situ concrete piles	t	1 Nominal size and type of bars stated.	2 Total concreted length.		1 Reinforcement is deemed to include tying wire and spacers plus links and binders that are incorporated at the discretion of the contractor. 2 Types of bars include plain, deformed and helical.
9 Breaking through obstructions	hr	1 Rig standing.			1 Only measured where the obstruction is encountered above the founding stratum of the pile.

TABULATED WORK SECTIONS

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
4 Isolated piers; isolated casings; chimney stacks; columns	m	1 Dimensioned description or dimensioned diagram.	1 Vertical. 2 Battered. 3 Curved: radius stated.		1 These are such when their length on plan is equal to or less than four times their thickness except where caused by openings. 2 No deductions to be made for flues and the like equal to or less than 0.10m <sup>2</sup> in cross sectional area.
5 Attached projections	m		1 Vertical. 2 Raking. 3 Horizontal. 4 Curved: radius stated.		1 Attached projections are attached piers whose length on plan is equal to or less than four times their thickness plus plinths, oversailing courses and the like.
6 Arches (number stated)	m	1 Height of face, width of soffit and shape of arch stated.			1 The length is the mean girth or length on face.
7 Bands; dimensioned description	m	1 Flush. 2 Sunk: depth of set back stated. 3 Projecting: depth of set forward stated.	1 Vertical. 2 Raking. 3 Horizontal. 4 Curved: mean radius on face stated.	1 Entirely of stretchers. 2 Entirely of headers. 3 Alternate headers/stretchers. 4 Other bond.	1 Bands are brick-on-edge bands, brick-on-end bands, basket pattern bands, moulded or played cappings, moulded string courses, moulded cornices and the like.
8 Flues 9 Flue linings 10 Filling around flues	m	1 Dimensioned description.	1 Method of forming.		
11 Extra over walls for perimeters and abutments, details stated	m	1 Dimensioned description.	1 Method of forming. 2 Closing cavities, additional ties, insulation and all other associated work is deemed included.		1 This will include work forming eaves, copings, kerbs, quoins, ends and the like.
12 Extra over walls for opening perimeters, details stated	m				1 This will include work forming sills, jambs, reveals, cavity closers, architraves, lintels, mullions, transoms, thresholds, steps and the like.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
13 Special purpose blocks or stones	m <sup>2</sup>	1 Dimensioned description.	1 Function stated.		1 Descriptions of stones are given as the smallest block from which each item can be obtained having regard in the case of natural stone to the plane in which the stone is required to be laid with relation to its quarry bed. The dimensions are taken over one mortar bed and one mortar joint.
14 Forming cavity	m <sup>2</sup>	1 Width and method of forming.	1 Type and spacing of ties.		
15 Cavity insulation	m <sup>2</sup>	1 Type and thickness.	2 Method of installing or fixing.		
16 Damp-proof courses ≤ 300mm wide	m	1 Gauge or thickness.	1 Vertical.		1 Damp-proof courses are deemed to include:
17 Damp-proof courses > 300mm wide	m <sup>2</sup>	2 Number of layers.	2 Raking.		(a) forming laps, ends and angles.
18 Pre-formed cavity trays	m	3 Composition and mix of bedding materials.	3 Horizontal.		(b) pointing exposed edges.
			4 Curved, mean radius on face stated.		(c) bonding to damp-proof membranes and the like.
			5 Stepped.		
19 Joint reinforcement	m	1 Width stated.			
20 Fillets	m	1 Width and thickness stated.		1 Weather. 2 Angle. 3 Other.	
21 Pointing	m	1 Width and depth of joint to be pointed.		1 Type of finish.	1 This relates to the pointing of joints, flashings, frames and the like.
22 Joints	m	1 Width and thickness stated.		1 Type of filler, sealant, pointing, method of application and preparation. 2 Ties: centres stated. 3 Channels.	1 Joints are only measured where their composition and position is designed.

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
23 Wedging and pinning	m	1 Width and thickness stated.			
24 Creasing	m	1 Width stated. 2 Number of courses.			
25 Proprietary and individual spot items.	nr	1 Dimensioned description or dimensioned diagram.	1 Proprietary reference or catalogue number where applicable.	1 Method of forming, building in or fixing.	<p>1 All of these items are deemed to include all necessary forming of openings or pockets, liners, cavity closers, damp-proof courses, fixings and fastenings and builder's work in connection with any associated mechanical or electrical connections.</p> <p>2 This will include items such as windposts, head restraint channels, steel lintels, wall end ties, wall end bonding channels, cappings, chimney pots, finials, boiler seats, soot doors, plinths, steps, winders, landings, bases, key blocks, air bricks, ventilator gratings, flue blocks, fire backs and sides, grates, carved bricks, blocks or stones, quoin stones, jamb stones, hearths, weep-hole formers and the like.</p> <p>3 The list is not exhaustive. Any type of individual shaped piece should be enumerated and described either by a dimensioned description or a dimensioned diagram or by reference to the specification or trade brochure.</p>

## 15 Structural metalwork

Structural Steelwork  
Structural aluminium work

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 All General arrangement drawings, Plans, Sections and Elevations.</li> <li>2 Drawings specific to the work.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Types and grade of materials including steel and steel to steel bolts.</li> <li>2 Specification describing fabrication, welding, testing, erection and everything else necessary to complete the installation.</li> <li>3 Surface preparation prior to application of any surface treatment or finish.</li> </ol>	<p><b>Notes, comments and glossary.</b></p>

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
12. Connections to existing steel and other members or structures	nr	1 Details stated.			1 All labours on new and existing steel are deemed included. 2 Labours on non-steel structures are measured elsewhere.
13. Trial erection	t	1 Details and location stated.			1 Only measured when not at discretion of contractor. 2 The information given in the description must include items such as the number of erectable pieces and number of site welds. This information may be given by reference to drawing(s).
14. Filling hollow sections	item	1 Water. 2 Concrete. 3 Other material type stated.	1 Details stated.		
15. Surface treatments	m <sup>2</sup>	1 Galvanising. 2 Sprayed coating. 3 Painting. 4 Other treatment: type stated.	1 On site. 2 Off site.	1 Preparation described. 2 Number of coats stated. 3 Thickness of coat(s) stated. 4 Fire rating stated. 5 Finish stated.	1 All preparation is deemed included.
16. Isolated protective coatings	nr	1 Approximate size or area stated.	2 Type of protective coated stated. 3 Preparation described.	1 On site. 2 Off site.	
17. Testing	item	1 Load tests. 2 Fire protection tests. 3 Other tests.	1 Details stated.		

# 16 Carpentry

- Timber framing
- Timber first fixings
- Timber, metal and plastic boarding, sheeting, decking, casings and linings
- Metal and plastic accessories

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 All general arrangement plans, sections and elevations.</li> <li>2 Drawings specific to the work.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Kind, quality and size of materials.</li> <li>2 Grade of timber.</li> <li>3 Type of preservative treatment.</li> <li>4 Type of protective coating.</li> <li>5 Method of fixing where not at the discretion of the contractor.</li> <li>6 Method of joining or construction where not at the discretion of the contractor.</li> <li>7 Spacing of battens and grounds.</li> <li>8 Nature of base.</li> </ol>	<p><b>Notes, comments and glossary</b></p>
<p>Minimum information that must be shown on the drawings that accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Layout and spacing of timbers.</li> <li>2 Types of materials used.</li> <li>3 Position of timbers in relation adjacent structures.</li> </ol>	<p><b>Works and materials deemed included.</b></p>	<ol style="list-style-type: none"> <li>1 All sizes nominal unless otherwise stated.</li> <li>2 All timbers are sawn unless otherwise stated.</li> <li>3 All work fabricated, assembled and erected on site unless otherwise stated.</li> <li>4 All work fixed by nails unless otherwise stated.</li> <li>5 Holes in timber for bolts and all other fixings.</li> <li>6 All labours on timber.</li> <li>7 All webs, gussets and the like on trusses and portals.</li> </ol>	

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Primary or structural timbers	m	1 Nominal size stated.	1 Rafters and associated roof timbers. 2 Purlins. 3 Wall plates. 4 Roof and floor joists. 5 Beams. 6 Posts or columns. 7 Partition and wall members. 8 Strutting.	1 Selection and protection for subsequent treatment. 2 Matching grains or colours. 3 Limits on planing margins. 4 Fixing centres stated where not at discretion of the contractor. 5 Type and size of bolts and other fixings and fastenings. 6 Background or nature of base. 7 Fixing through vulnerable materials. 8 Surface finish or treatment applied as part of the manufacturing process. 9 Length > 6.00 in one continuous length.	1 Strutting is measured through the structural members being stiffened.
2 Engineered or prefabricated members/items	nr	1 Finished Dimensioned description.	2 Roof trusses. 3 Portal frames. 4 Trusses. 5 Wall panels. 6 Beams. 7 Joists. 8 Posts or columns.	1 Manufacturers' reference. 2 Length > 6.00 in one continuous length.	
3 Backing and other first fix timbers	m	1 Nominal Dimensioned description of each member.	1 Grounds. 2 Battens.		
	m <sup>2</sup>	2 Nominal Dimensioned description of each member.	1 Framed grounds, battens and bracketing.	1 Centres, each way stated.	
4 Boarding, flooring, sheeting, decking, casings, linings, sarking, fascias, bargeboards, soffits and the like	m ----- m <sup>2</sup>	1 Not exceeding 600mm wide; finished width and thickness stated. 2 Over 600mm wide; finished thickness stated.	1 Horizontal. 2 Sloping. 3 Vertical. 4 Curved: radius stated. 5 Soffit or ceiling. 6 Other shape described.	1 Finish stated unless sawn. 2 Type of joints where not at the discretion of the contractor. 3 Profile.	1 The location of the work shall be given such as external walls, internal walls and attached piers, isolated columns, floors, ceilings and attached beams, isolated beams, roofs, eaves, verges, tops and cheeks of dormers and the like.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
5 Ornamental ends of timber members	nr	<ol style="list-style-type: none"> <li>1 Size and detail stated.</li> </ol>			
6 Metal fixings, fastenings and fittings	nr	<ol style="list-style-type: none"> <li>1 Dimensioned description.</li> <li>2 Proprietary reference or catalogue number where applicable.</li> </ol>	<ol style="list-style-type: none"> <li>1 Ties.</li> <li>2 Rods.</li> <li>3 Brackets.</li> <li>4 Straps.</li> <li>5 Shoes.</li> <li>6 Bolts.</li> <li>7 Joist hangers.</li> <li>8 Other: details stated.</li> </ol>	<ol style="list-style-type: none"> <li>1 Method of fixing stated.</li> <li>2 Background stated if not timber</li> </ol>	<ol style="list-style-type: none"> <li>1 Bolts include heads, nuts and washers.</li> <li>2 The length of a bolt is measured over the head.</li> <li>3 Work is deemed to include all labours in fabricating and fixing including drilling holes in the fitting, the timber and the background.</li> </ol>

## 17 Sheet roof coverings

Bituminous felts  
Plastic sheets  
Sheet metals

Rigid boards with factory applied sheet coverings  
Any other type of sheet roof covering

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Plans of each roof.</li> <li>2 Principal sections of roof.</li> <li>3 External elevations.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Kind, quality of materials.</li> <li>2 Thickness, gauge, weight and temper.</li> <li>3 Method of fixing.</li> <li>4 Details and position of laps, drips, welts, beads, rolls, joints, upstands and downstands.</li> <li>5 Bonding to other work.</li> <li>6 Radius of curved work.</li> <li>7 Type(s) and spacing of joints.</li> <li>8 Type(s) and spacing of seams.</li> <li>9 Special finishes.</li> </ol>	<p><b>Notes, comments and glossary</b></p> <ol style="list-style-type: none"> <li>1 Examples of roof coverings measured in accordance with the rules of this section are: sheet lead, aluminium, copper, zinc, stainless steel, fibre bitumen, butyl rubber, thermoplastic and the like membranes.</li> <li>2 This list is not exhaustive.</li> </ol>

## 18 Tile and slate roof and wall coverings

- Plain tiling
- Interlocking tiling
- Fibre cement slating
- Natural slating
- Natural or artificial stone slating
- Timber or bituminous felt shingles
- Any other type of tile, slate, slab or block roof or wall covering

Drawings that must accompany this section of measurement.	<ol style="list-style-type: none"> <li>1 Plans of each roof.</li> <li>2 Principal sections of roof.</li> <li>3 External elevations.</li> </ol>	Mandatory information to be provided.	<ol style="list-style-type: none"> <li>1 Kind, quality and size of materials.</li> <li>2 Method of fixing.</li> <li>3 Minimum laps.</li> <li>4 Spacing of battens and counter battens.</li> <li>5 Composition and mix of mortar.</li> <li>6 Type of pointing.</li> <li>7 Bonding to other work.</li> <li>8 Radius of curved work.</li> </ol>	Notes, comments and glossary
Minimum information that must be shown on the drawings that accompany this section of measurement.	<ol style="list-style-type: none"> <li>1 Major horizontal and vertical dimensions.</li> <li>2 Types of materials used to construct the roof and its structures.</li> <li>3 Position of main structural frame members.</li> <li>4 Height of work above ground level.</li> </ol>	Works and materials deemed included.	<ol style="list-style-type: none"> <li>1 All rough and fair square, raking and curved cutting.</li> <li>2 All ends and angles either formed or proprietary.</li> <li>3 Extra material for curved work.</li> <li>4 Forming all rough and fair grooves, throats, mortices, chases, rebates, holes, stops, mitres and the like labours.</li> <li>5 Raking out joints to form a key.</li> </ol>	

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Roof coverings 2 Wall coverings	m <sup>2</sup>	1 Pitch stated. 2 Vertical.	1 Underlays and battens.	6 Raking out joints to insert flashings. 7 Labours in returns, ends and angles. 8 All extra material required for bonding. 9 Additional material in laps. 10 Work in forming voids and holes ≤ 1.00m <sup>2</sup> .	1 Coverings are deemed to include underlays, battens and work in forming voids ≤ 1.00m <sup>2</sup> . 2 No deduction is made for voids ≤ 1.00m <sup>2</sup> .
3 Boundary work; location and method of forming described	m	1 Dimensioned description stating net girth.	1 Abutments. 2 Eaves. 3 Ridges. 4 Verges. 5 Valleys. 6 Hips. 7 Vertical angles.	1 Horizontal. 2 Sloping. 3 Raking. 4 Vertical. 5 Curved: radius stated. 6 Stepped. 7 Pre formed.	1 Boundary work is deemed to include underlocks, rough and fair cutting, bedding, pointing, ends, angles and intersections. 2 Boundary work to voids is only measured where the void exceeds 1.00m <sup>2</sup> . 3 Boundary work is work associated with closing off or finishing off tile or slate roofing at the external perimeter; at the abutment with different materials or the perimeter of openings and voids. 4 Valleys include everything necessary to form and line the valley excluding any sheet metal. Sheet metal linings shall be measured in Work Section 17: Sheet Roof coverings.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
4 Fittings	nr	1 Dimensioned description.	1 Ventilators. 2 Finials. 3 Gas terminals. 4 Hip irons. 5 Soakers. 6 Saddles. 7 Rooflights. 8 Other: type stated.	1 Nature of base. 2 Method of fixing where not at the discretion of the contractor.	1 Proprietary references may be given in lieu of a dimensioned description.

## 19 Waterproofing

- Mastic asphalt roofing
- Applied liquid roofing
- Asphalt tanking or damp proofing
- Applied liquid tanking or damp proofing
- Flexible sheet tanking or damp proofing
- Other proprietary systems of tanking or damp proofing

Drawings that must accompany this section of measurement.	<ol style="list-style-type: none"> <li>1 Plans of each level where work is to be carried out.</li> <li>2 Sections showing extent of work.</li> </ol>	Mandatory information to be provided.	<ol style="list-style-type: none"> <li>1 Restrictions on siting of plant and materials.</li> <li>2 Kind and quality of all materials.</li> <li>3 Thickness and number of coats.</li> <li>4 Surface finishes or treatments.</li> </ol>	Notes, comments and glossary
Minimum information that must be shown on the drawings that accompany this section of measurement.	<ol style="list-style-type: none"> <li>1 Extent of work.</li> <li>2 Height of work above ground level.</li> </ol>	Works and materials deemed included.	<ol style="list-style-type: none"> <li>1 Cutting to line.</li> <li>2 All labour and material associated with cutting, notching, bending, lapping and reinforcement.</li> <li>3 Working into recesses such as duct covers, shaped insets, manhole covers, mat wells, outlet pipes, dished gullies and the like.</li> <li>4 Work to falls and cross falls.</li> <li>5 All boundary work to openings <math>\leq 1.00\text{m}^2</math></li> <li>6 All preparation to background necessary to form a key, including raking out joints, scabbling or the application of a bonding agent.</li> </ol>	

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Coverings > 500mm wide	m <sup>2</sup>	<ol style="list-style-type: none"> <li>1 Horizontal.</li> <li>2 Sloping; pitch stated.</li> <li>3 Vertical.</li> <li>4 Curved: radii stated.</li> </ol>	<ol style="list-style-type: none"> <li>1 Underlays.</li> <li>2 Insulation.</li> <li>3 Finish to exposed surface.</li> <li>4 Protection.</li> </ol>	<ol style="list-style-type: none"> <li>1 Nature of base.</li> <li>2 Number of coats or layers.</li> </ol>	<ol style="list-style-type: none"> <li>1 The area measured is that in contact with base.</li> <li>2 No deduction is made for voids ≤ 1.00m<sup>2</sup>.</li> </ol>

16 Cubicle partition sets	nr	<ol style="list-style-type: none"> <li>1 Dimensioned diagram or dimensioned description.</li> </ol>	<ol style="list-style-type: none"> <li>1 Complete cubicles: number of bays stated.</li> </ol>	<ol style="list-style-type: none"> <li>1 Nature of background.</li> <li>2 Method of fixing to background.</li> </ol>	<ol style="list-style-type: none"> <li>1 Cubicle sets are deemed to include all integral frames, panels, doors, factory applied trims, connections, fixings and fastenings complete with support legs, brackets and standard ironmongery.</li> </ol>

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
17 Items extra over the partition they occur in	m	1 Trims: dimensioned description.			1 Trims are only measured as separate items if fixed on site.
<b>Infill panels</b>					1 Infill panels are non-glass and non-glass plastics rigid sheet spandrel and infill panels of all kinds fixed with beads, gaskets and the like to wood, metal, plastic and concrete surrounds. They exclude panels or sheets forming an integral part of a component or proprietary cladding system.
18 Infill panels and sheets, number stated	m <sup>2</sup>	1 Thickness stated.	1 Curved: stating radius. 2 Panels exceeding size of normal manufactured unit. 3 Panels requiring special treatment to edges.		1 Work is deemed internal unless described as external. 2 Infill panels are deemed to include bedding compounds, sealants, intumescent compounds and strips, distance pieces, location and setting blocks and fixings.
<b>Sealant joints</b>					1 Kind and quality of materials. 2 Method of application. 3 Method of preparing contact surfaces.
19 Joints: contact surfaces stated	m	1 Type and size of components stated.	1 Vertical. 2 Sloping. 3 Soffit. 4 Horizontal.		1 Lengths are measured on face. 2 Work is deemed to include preparation, cleaners, primers, sealers, backing strips and fillers.
20 Pointing: contact surfaces stated	m	1 One side. 2 Both sides.			

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
21 Raking out existing joints	m	1 Width, depth and type of material stated.	1 Vertical. 2 Sloping. 3 Soffit. 4 Horizontal.		3 Deemed to include disposal of all debris.
<b>Ironmongery</b>					1 Kind and quality of materials and fixings. 2 Surface finish. 3 Constituent parts of the units or sets. 4 Fixing through vulnerable materials.
22 Type of item, unit or set stated	nr	1 Method of fixing. 2 Nature of base.			1 Ironmongery is deemed to include fixing with screws to match and preparing the base to receive it. 2 Shelf brackets and associated fittings will be measured here.

## 23 Windows, screens and lights

- Timber, metal, plastic:
- Windows and shop fronts
- Rooflights
- Screens
- Louvres, shutters, canopies and blinds
- Associated glass and glazing
- Associated ironmongery

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 General arrangement plans.</li> <li>2 Door and window schedule.</li> <li>3 Glazing schedule.</li> <li>4 Ironmongery schedule.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Kind and quality of materials and if timber describing if wrot or sawn</li> <li>2 Preservation treatments.</li> <li>3 Surface treatments applied as part of the production process.</li> <li>4 Selection and protection for subsequent treatment or clear finish.</li> <li>5 Matching grain or colour.</li> <li>6 Limits on planing margins.</li> <li>7 Method of jointing and construction where not at the discretion of the contractor.</li> <li>8 Form of construction and jointing where not at the discretion of the contractor.</li> <li>9 Method of fixing where not at the discretion of the contractor.</li> <li>10 Background where vulnerable.</li> </ol>	<p><b>Notes, comments and glossary</b></p>

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Windows and window frames	nr	1 Dimensioned description or diagram.	1 Curved work radius stated.	1 Method of fixing if not left to discretion of contractor. 2 Factory glazed.	1 Glass may be incorporated into the associated work following the rules set out below.
2 Window shutters					
3 Sun shields					
4 Rooflights, skylights and lanternlights					
5 Screens, borrowed lights and frames					
6 Shop fronts					
7 Louvres and frames					
<b>Glazing</b>					
8 Glass, type stated	nr	1 Thickness of glass or overall thickness of sealed unit stated. 2 Pane size.	1 Shape if other than square or rectangular. 2 Airspace(s) width(s) of double/triple glazed units. 3 Gas filling of airspaces.	1 Bent: direction stated. 2 Method of glazing or securing. 3 Edge treatment.	1 Glass includes plastic, or any type of material glazed into openings except glass blocks. 2 The size given for irregular panes shall be the smallest rectangular size from which the pane can be obtained.
9 Louvre blades					
<b>Ironmongery</b>					
10 Type of item, unit or set stated	nr	1 Method of fixing. 2 Nature of base.	1 Kind and quality of materials and fixings. 2 Surface finish. 3 Constituent parts of the units or sets.		1 Ironmongery is deemed to include fixing with screws to match and preparing the base to receive it.

## 24 Doors, shutters and hatches

- Timber, metal, plastic:
- Doors and frames
- Shutters and Hatches
- Sliding or folding doors and partitions
- Grilles
- Associated glass and glazing
- Associated ironmongery

TABULATED WORK SECTIONS

Minimum information that must be shown on the drawings that accompany this section of measurement.	Unit	Level one	Level two	Works and materials deemed included.	Level three	Notes, comments and glossary
1 Staircase: type stated	nr	1 Dimensioned description. 2 Component drawing reference.		1 All ramps, wreaths, bends, plain ends, ornamental ends and the like labours. 2 Linings, nosings, cover moulds, trims and the like where integral part of the unit. 3 Soffit linings, spandrel panels and the like where an integral part of the unit. 4 Ironmongery where an integral part of the unit. 5 Finishes applied off site. 6 Fixings, fastenings, blockings, wedges, bolts, brackets, cleats and the like.	1 Staircases are deemed to include attached balustrades and newel posts. 2 Any trims and the like fixed to the unit after installation must be measured in accordance with the rules of Work Section 22: General joinery.	
2 Loft ladders					1 Hatch doors where part of the loft ladder component.	
3 Ladders						
4 Extra over for:	nr	1 Quarter landing. 2 Half landing.	1 Dimensioned description.			
5 Catwalks	m	1 Dimensioned description.	1 Curved: radius stated.	1 Method of fixing or support. 2 Background.		
6 Walkways						

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
7 Balustrades	m ----- nr	1 Dimensioned description. ----- 2 Component drawing reference.	1 Curved: radius stated.	1 Infill panels: detail stated. 2 Method of fixing or support. 3 Background.	1 These items are measured when not forming an integral part of a staircase unit. 2 These items include all integral rails, infill panels, ironmongery, factory applied finishes, fixings and fastenings.
8 Handrails					
9 Barriers					
10 Guard rails					
11 Balcony units					
12 Extra over for:	nr	1 Opening portions: size and details stated.			

## 26 Metalwork

- Isolated metal members
- General metalwork
- General metalwork fittings and fixtures

Drawings that must accompany this section of measurement.	Plans, sections, elevations or details sufficient to show location, scope and construction of each item measured.	Mandatory information to be provided.	Notes, comments and glossary
Minimum information that must be shown on the drawings that accompany this section of measurement.	<ol style="list-style-type: none"> <li>1 Position of the work.</li> <li>2 Types and sizes of structural members and their position relative to each other.</li> </ol>	<b>Works and materials deemed included.</b> <ol style="list-style-type: none"> <li>1 All fabrication and erection.</li> <li>2 All bolts, nuts, washers, fixings and fastenings.</li> </ol>	<ol style="list-style-type: none"> <li>1 Types and grades of materials.</li> <li>2 Details of connections.</li> <li>3 Details of welding tests and x-rays.</li> <li>4 Details of performance tests.</li> </ol>

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Screeds, beds and toppings; thickness and number of coats stated	m ----- m <sup>2</sup>	1 ≤ 600mm wide. ----- 2 > 600mm wide.	1 Level and to falls only ≤ 15° from horizontal. 2 To falls, cross falls and slopes ≤ 15° from horizontal. 3 To falls, cross falls and slopes > 15° from horizontal.	1 Surface finish. 2 Nature of background. 3 Backings and beddings: thickness stated. 4 Underlays: type and thickness stated. 5 Insulation: type and thickness stated. 6 Laid in one operation with its base. 7 Pattern of joints. 8 Laid in one operation with base (monolithically).	1 Thicknesses stated are the thickness exclusive of adhesives, keys, grooves and the like. 2 Underlays include plasterboard or other rigid sheet lathing.
2 Finish to floors; type of finish and overall thickness stated	m m <sup>2</sup>	1 ≤ 600mm wide. 2 > 600mm wide.			3 Tiles are deemed to be laid with their long edges vertical or parallel to the long axis of the floor or ceiling.
3 Raised access floors; type of finish and thickness of panels stated			1 Height of cavity stated.		
4 Ramps to raised access floors	nr	1 Length, width and height.			4 The height stated is the height at the top end.
5 Fire barriers within void below raised floor	m <sup>2</sup> ----- m	1 Thickness stated. ----- 2 Thickness and height stated.	1 Fire rating. 2 Method of fixing in position. 3 Obstructed by services.		1 Fire barriers are deemed to include all support work, scribing or forming to fit, angles, ends and working around structures, support work and services.

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
6 Finish to roofs, type of finish and overall thickness stated	m m <sup>2</sup>	1 ≤ 600mm wide. 2 > 600mm wide.	1 Level and to falls only ≤ 15° from horizontal. 2 To falls, cross falls and slopes ≤ 15° from horizontal. 3 To falls, cross falls and slopes > 15° from horizontal.		1 Roof finishes include grass, sedum and the like live finishes. 2 They exclude solar reflective paint, chippings and the like that will be measured with their associated roof covering. 3 Width is the width of each face.
7 Finish to walls, type of finish and overall thickness stated	m m <sup>2</sup>	1 ≤ 600mm wide. 2 > 600mm wide.	1 Curved, radius stated.		1 Height of wall finishes is measured to finished ceiling height or specified height past suspended ceilings. 2 Wall finishes are measured behind skirtings unless the skirting is installed prior to the wall finish. 3 Width is the width of each face.
8 Finish to isolated columns, type of finish and overall thickness stated					
9 Finish to ceilings, type of finish and overall thickness stated	m m <sup>2</sup>	1 ≤ 600mm wide. 2 > 600mm wide.	1 Over 3.50m above structural floor level.		1 Height of ceiling is measured from structural floor level to soffit of finished ceiling or isolated beam. 2 Width is the width of each face.
10 Finish to isolated beams, type of finish and overall thickness stated					
11 Finish to treads	m	1 Net width stated.	1 Curved: radius stated.	1 Nature of background. 2 Insets described.	1 Ends, angles and outlets deemed included.
12 Finish to risers	m	1 Net width stated.	1 Curved: radius stated. 2 Undercut.	1 Nature of background.	
13 Finish to strings and aprons	m	1 Net width or girth on face stated.	1 Raking. 2 Sloping. 3 Curved: radius stated.	1 Nature of background.	
14 Skirtings, net height stated	m	1 Net height stated.	1 Raking. 2 Sloping. 3 Curved: radius stated.	1 Nature of background. 2 Cove formers.	

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
15 Linings to channels	m	1 Net girth on face stated.	1 Raking. 2 Sloping. 3 Curved: radius stated.	1 Nature of background.	1 Ends, angles and outlets deemed included.
16 Kerbs and cappings	m	1 Net girth on face stated.			
17 Coves	m	1 Girth and shape stated. ----- 2 Dimensioned description.	1 Patterned: details stated. 2 Horizontal. 3 Raking. 4 Sloping. 5 Vertical. 6 Undercut. 7 Flush. 8 Raised. 9 Sunk.	1 Method of fixing. 2 Nature of background.	1 Measure the length in contact with the base. 2 All ends, angles, intersections are deemed included.
18 Mouldings					
19 Cornices					
20 Architraves					
21 Ceiling ribs					
22 Bands					
23 Special tiles, slabs or blocks	nr ----- m <sup>2</sup>	1 Dimensioned description. 2 Manufacturers' reference.			1 Special tiles are only measured here if not already measured under previous rules 11-22 inclusive.
24 Surface dressings, sealers or polishes.	m <sup>2</sup>	1 Type stated. 2 Rate of coverage stated.	1 Horizontal. 2 Sloping. 3 Vertical. 4 Soffits.	1 Nature of finish being treated.	1 Dressings include carborundum grains, stone chippings and the like. 2 Sealers include waterproofer, hardeners, dustproofers, polishes and the like.
25 Movement joints	m	1 Dimensioned description.		1 Method of fixing. 2 Nature of background.	1 Movement joints include expansion joints. 2 Function of beads include angle beads, stop beads, shadow gap beads, casing beads and the like.
26 Cover strips					
27 Dividing strips					
28 Beads, function stated					
29 Nosings					
30 Reinforcement, details stated	m	1 To walls. 2 To ceilings. 3 To floors. 4 To roofs. 5 To isolated beams. 6 To isolated columns.	1 Depth of suspension.	1 Method of fixing. 2 Nature of background.	
31 Metal mesh lathing, details stated	----- m <sup>2</sup>				
32 Board insulation, thickness stated					
33 Quilt insulation, thickness stated					
34 Isolation membranes, thickness stated					

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
35 Accessories	m <sup>2</sup>	<ul style="list-style-type: none"> <li>Dimensioned description.</li> </ul>	<ul style="list-style-type: none"> <li>Method of fixing.</li> </ul>	<ul style="list-style-type: none"> <li>Nature of background.</li> </ul>	<ul style="list-style-type: none"> <li>Accessories include access panels, special panels in raised access floors, vent grilles, ornaments and the like.</li> </ul>
36 Precast plaster components	m	<ul style="list-style-type: none"> <li>Dimensioned description or proprietary reference.</li> </ul>	<ul style="list-style-type: none"> <li>Method of fixing.</li> </ul>	<ul style="list-style-type: none"> <li>Nature of background.</li> </ul>	<ul style="list-style-type: none"> <li>The dimensioned description shall fully describe the component including stating the end use such as cornice, moulded band, architrave and the like.</li> </ul>

## 29 Decoration

- Painting and clear finishes
- Intumescent coatings
- Decorative papers or fabrics
- Anti corrosion treatments

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Plans and elevation drawings showing scope and location of the work.</li> <li>2 Painting/decorating schedule(s).</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Kind and quality of materials.</li> <li>2 Nature of base.</li> <li>3 Description of surface if not smooth.</li> <li>4 Preparatory work to base.</li> <li>5 Type and number of priming or sealing coats.</li> <li>6 Type and number of undercoats.</li> <li>7 Type and number of finishing coats.</li> <li>8 Method of application.</li> <li>9 Type of treatment applied between coats.</li> <li>10 Pattern of decorative papers.</li> <li>11 Method of fixing and jointing papers or fabrics.</li> </ol>	<p><b>Notes, comments and glossary</b></p> <ol style="list-style-type: none"> <li>1 Method of application left to contractor unless stated otherwise.</li> <li>2 Nature of non-smooth base includes description of base texture and profile such as corrugated, fluted, moulded or carved.</li> </ol>
<p>Minimum information that must be shown on the drawings that accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Ceilings over 3,5m above finished floor level.</li> </ol>	<ol style="list-style-type: none"> <li>1 Works and materials deemed included.</li> </ol>	<ol style="list-style-type: none"> <li>1 All cutting to line.</li> <li>2 Multi-coloured work on differing surfaces.</li> <li>3 All cutting to papers and fabrics.</li> </ol>	

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Painting to general surfaces 2 Painting to glazed surfaces irrespective of pane sizes 3 Painting structural metalwork 4 Painting radiators, type stated 5 Painting gutters 6 Painting pipes 7 Painting services, type stated	m m <sup>2</sup> nr	1 ≤ 300mm girth. 2 > 300mm girth. 3 Isolated areas ≤ 1.00m <sup>2</sup> irrespective of location or girth.	1 Internal. 2 External.	1 Work to ceilings or beams over 3.5m but not exceeding 5m above finished floor level and thereafter in 3.00m stages. 2 Surfaces to remain unpainted. 3 Multi-coloured on one surface. 4 Patterned: details stated. 5 Fire rating. 6 Application on site prior to fixing. 7 Application off site prior to fixing.	1 The area or girth measured is that covered. 2 The girth of frames and the like is calculated from one edge to the other over all trims, architraves, stops and the like and assume doors have been removed prior to painting. 3 The girth designated as external on door frames and the like is that part of the frame visible when the door is closed. 4 Examples of radiator types are flat, panelled, column, tubular or the like.
8 Painting railings, fences and gates	m m <sup>2</sup> nr	1 ≤ 300mm girth. 2 > 300mm girth. 3 Isolated areas ≤ 1.00m <sup>2</sup> irrespective of location or girth.	1 Closed. 2 Open. 3 Ornamental.		1 Closed means no gaps whatsoever.
<b>Decorative papers or fabrics</b>					
9 Walls and columns	m	1 Areas ≤ 1.00m <sup>2</sup> .	1 Curved surfaces. radii stated.	1 Lining paper:	1 No deduction made for voids ≤ 1.00m <sup>2</sup> .
10 Ceilings and beams	m <sup>2</sup>	2 Areas > 1.00m <sup>2</sup> .		2 Work to ceilings or beams over 3.5m but not exceeding 5m above finished floor level and thereafter in 3.00m stages.	1 Mitres, ends angles, scribing or cutting deemed included.
11 Borders	m	1 Dimensioned description.			
12 Motifs	nr	1 Dimensioned description or diagram.			

### 30 Suspended ceilings

Demountable suspended ceilings  
Solid suspended ceilings

<p>Drawings that must accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Plans showing location of the work .</li> <li>2 Reflected ceiling plans showing scope and complexity of the work.</li> </ol>	<p><b>Mandatory information to be provided.</b></p>	<ol style="list-style-type: none"> <li>1 Kind and quality of materials.</li> <li>2 Size(s) of panels and strips.</li> <li>3 Construction of suspension framing and systems.</li> <li>4 Method of fixing.</li> <li>5 Nature of background.</li> <li>6 Nature of services located in the ceiling void.</li> <li>7 Nature of integral services and fittings.</li> </ol>	<p><b>Notes, comments and glossary</b></p> <ol style="list-style-type: none"> <li>1 All work is deemed internal unless described as external.</li> <li>2 Secondary steel or timber support work is measured elsewhere.</li> </ol>
<p>Minimum information that must be shown on the drawings that accompany this section of measurement.</p>	<ol style="list-style-type: none"> <li>1 Services located within the ceiling void.</li> <li>2 Location of integral services and fittings.</li> </ol>	<p><b>Works and materials deemed included.</b></p>	<ol style="list-style-type: none"> <li>1 Working over and around obstructions.</li> <li>2 All cutting.</li> <li>3 Forming openings and holes.</li> <li>4 All additional support work including bridging for fittings.</li> <li>5 All extra work required for work described as patterned.</li> </ol>	<ol style="list-style-type: none"> <li>1 Integral fittings are those designed to be incorporated into the ceiling structure.</li> </ol>

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Ceilings 2 Plenum ceilings 3 Beams 4 Bulkheads	m <sup>2</sup>	1 Depth of suspension ≤ 150mm. 2 Depth of suspension 150–500mm. 3 Depth thereafter in 500mm stages.	1 Type and thickness of lining. 2 Method of fixing lining to suspension. 3 Integral insulation. 4 Integral vapour barrier. 5 Height of work exceeding 3.50m above finished floor level in 1.50m stages.	1 Patterned: details stated. 2 Sloping. 3 Curved: radius and plane of curve stated. 4 Suspension obstructed by services. 5 Trims at regular intervals within area of ceiling: details stated.	1 Area measured is that on the exposed face. 2 Depth of suspension is measured from underside of main structural soffit or secondary support work to back surface of lining. 3 Height of work is measured from finished floor level to face of ceiling. 4 Where ceilings are suspended from sloping, curved or irregular structures an average depth of suspension shall be stated.
5 Isolated strips	m	1 Width ≤ 600mm. 2 Width thereafter in 300mm stages.			
6 Upstands	m	1 Height ≤ 600mm. 2 Height thereafter in 300mm stages.			
7 Access panels	m <sup>2</sup>	1 Dimensioned description. 2 Proprietary reference.	1 Composition. 2 Method of fixing.	1 Method of locking.	1 Access panels are deemed to include all additional support work, framing, edge trim and fixings.
8 Edge trims 9 Angle trims	m	1 Dimensioned description.	1 Plain. 2 Floating.	1 Centres of fixing. 2 Nature of background.	1 Plain trims are those fixed to the structure. 2 Floating trims are those fixed to the ceiling system. 3 Trims are deemed to include ends and angles.
10 Fire barriers	m ----- m <sup>2</sup>	1 Dimensioned description. ----- 2 Thickness stated.	1 Fire rating where required.	1 Method of fixing in position. 2 Obstructed by services stated.	1 Fire barriers are deemed to include all support work, scribing or forming to fit, angles, ends and working around structures, support work and services.

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
11 Collars for services passing through fire barriers	m	1 Diameter of pipe. 2 Size of trunking.	1 Pipes. 2 Trunking.	1 Length of sleeve each side of barrier stated. 2 Fire rating	1 Collars are only measured here where they are integral with the fire barrier. If they are not integral they shall be measured in accordance with the rules of Work Section 40: Builder's work in connection with mechanical, electrical and transportation installations.
12 Fittings	m	1 Dimensioned description.		1 Nature of background stated.	
13 Shadow gap battens	m	1 Dimensioned description.		1 Centres of fixing. 2 Nature of background.	1 Ends, angles and the like deemed included.

### 31 Insulation, fire stopping and fire protection

Board, sheet, quilt, sprayed, loose fill or foamed insulation and fire protection installations

Drawings that must accompany this section of measurement.	Plans, sections and details sufficient to show the scope and location of the various works relating to this section.	Mandatory information to be provided.	Notes, comments and glossary
Minimum information that must be shown on the drawings that accompany this section of measurement.		Works and materials deemed included.	
<b>Item or work to be measured</b>	<b>Unit</b>	<b>Level one</b>	<b>Level three</b>
1 Boards	m <sup>2</sup>	1 Thickness stated.	1 The area measured is that covered.
2 Sheets			2 No deduction is made for voids ≤ 1.00m <sup>2</sup> .
3 Quilts		1 Plain areas.	3 The area of joists, rafters, partition framing or like members is deducted when the material is laid between such members.
4 Loose		2 Laid across joists, rafters, partition framing or like members: centres of members stated.	4 Sloping is the upper surface not horizontal.
		3 Laid between joists, rafters, partition framing or like members: centres of members stated.	5 Soffits are the underside of any horizontal or sloping structure.
	m	4 Location stated.	
5 Sprayed	m <sup>2</sup>	1 Thickness stated.	
			1 Nature of background.

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
1 Primary equipment	nr	1 System	1 Location of installation – Roofs, high or low level in plantrooms, risers or service ducts, high or low level on floors.	1 Type, size, capacity, load, rating, special finishes, casings, in-fills, associated integrated or remote ancillaries, controls, indicators or components, anti-vibration mountings, acoustic performance/treatment and method of fixing.	1 Primary equipment is defined as plant or equipment from which a system originates, e.g. boiler, main storage tank, air handling unit, fan and the like. 2 Cross referenced to drawings and/or a full specification. 3 High and low level to be in accordance with National Health and Safety recommendations and National Working Rule Agreements.
		2 Off-load and position primary equipment			
		3 Assembly of composite items of primary equipment.			
2 Terminal equipment and fittings	nr	1 System.	1 Location of installation – roofs, high or low level in plantrooms, risers or service ducts, high or low level on floors.	1 Type, size, capacity, load, rating, special finishes, casings, in-fills, associated integrated or remote ancillaries, controls, indicators or components, anti-vibration mountings, acoustic performance/treatment and method of fixing.	1 Terminal equipment and fittings are defined as any item to which a system is distributed to, e.g. heat emitters, grilles, fan coil units and the like.
3 Pipework	m	1 Material, finish, nominal diameter, method of jointing, fixings and background for fixing.	1 Location of installation – Roofs, high or low level in plantrooms, risers or service ducts, high or low level on floors, in trenches.		1 Generally all pipework to be measured inclusive of all fittings, i.e. unions, connectors, flanges, bends, tees, junctions, reducers, test points, bosses, sockets, tappings and the like.
		1 Unless measured separately, all fittings are deemed to be included.			

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
4 Alternative 1 – pipe fittings	nr	1 Type, material, finish, nominal diameter, method of jointing.			1 Unions, connectors, flanges, bends, tees, sets, junctions, reducers, test points, bosses, sockets, tappings and the like.
5 Pipe ancillaries	nr	1 Type, material, finish, nominal diameter, method of jointing.			1 Valves, strainers, expansion bellows, anchors, guides and rollers, gullies, outlets, rainwater heads, tundishes, traps, pipe sleeves, wall, floor and ceiling plates and the like.
6 Ventilation ducts		1 Material, finish, section shape, dimensions, method of jointing, fixings and background for fixing.	1 Location of installation – roofs, high or low level in plantrooms, risers or service ducts, high or low level on floors.		1 Generally all ductwork to be measured inclusive of all fittings, i.e. connectors, flanges, bends, tees, junctions, reducers, spigots, test holes and the like.
7 Alternative 1 – duct fittings	nr	1 Unless measured separately, all fittings are deemed to be included.			1 Joints, flanges, bends, tees, sets, junctions, reducers, spigots, test holes and the like.
8 Duct ancillaries	nr	1 Type, material, finish, shape, dimensions, method of jointing.			1 Dampers, in-duct heater/cooling coils.
9 Insulation and fire protection	nr	1 Type, material, finish	1 Location of installation – roofs, high or low level in plantrooms, risers or service ducts, high or low level on floors, in trenches.	1 To equipment and fittings.	
	m	2 Thickness, material, finish, nominal diameter of pipe.		1 To pipework.	1 Generally all insulation to pipework to be measured inclusive of all fittings, i.e. unions, connectors, flanges, bends, tees, sets, junctions, reducers, test points, bosses, sockets, tappings and the like.

41 BUILDER'S WORK IN CONNECTION WITH MECHANICAL, ELECTRICAL AND TRANSPORTATION INSTALLATIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
5 Duct covers and frames	m ----- nr	1 Width and type stated. ----- 2 Size and type stated.	1 Limitations to lengths of covers stated. 2 Finish stated.	1 Method of fixing stated. 2 Nature of background stated.	
6 Supports for services not provided by services contractor	m ----- nr	1 Size and type stated. ----- 2 Size, length and type stated.	1 Pylons. 2 Poles. 3 Wall brackets. 4 Soffit hangers. 5 Stays. 6 Proprietary supports. Manufacturers reference stated.		
7 Catenary cables	m	1 Size and type stated.	1 Eye bolts: details stated. 2 Shackles: details stated. 3 Straining screws: details stated.		1 The length is net with no allowance made for sag.
<b>Work for services installations in existing buildings</b>					
8 Cutting holes through existing structures	nr	1 Size stated.	1 Nature and thickness of structure stated.		1 Making good to match existing or preparing for new work is deemed included.
9 Cutting mortices and sinkings in existing structure	nr	1 Size stated.	1 Nature of structure stated.		

TABULATED WORK SECTIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
10 Cutting chases through existing structures	m	1 Size and number of services stated.			
11 Lifting and replacing floor boards	m	1 Size and number of services stated.			1 No distinction is made between routes parallel or at an angle to the floor boards. 2 Cutting boards and notching or holing joists is deemed included.
12 Lifting and replacing duct covers or chequer plates	m	1 Width and type stated.			
<b>Work for external services installations</b>					
13 Underground service runs	m	1 Average trench depth in 500mm increments. 2 Type and nominal diameter of pipe duct. 3 Multiple pipe ducts stating number and nominal diameter of pipe ducts. 4 Pipe duct(s) supplied by others; type and nominal diameter. 5 Type and size of cover tile(s) or identification tape(s).	1 Method of jointing pipe ducts. 2 Pipe duct bedding and or surround; details stated. 3 Type of backfill if not obtained from the excavations.	1 Vertical. 2 Curved. 3 Below ground water level. 4 Next to existing roadway or path. 5 Next to existing building. 6 Specified multiple handling; details stated. 7 Disposal of excavated material where not at the discretion of the contractor; details stated.	1 Pipe duct runs are deemed to run straight unless stated otherwise. 2 Pipe duct runs are measured from external face of manhole to external face of manhole or accessory. 3 Average depth is calculated for each run irrespective of maximum depth.
14 Items extra over service runs irrespective of depth or pipe size	m <sup>2</sup>	1 Breaking up hard surface pavings; thickness stated. 2 Lifting and preserving turf; thickness stated.	1 Reinstating to match existing; details stated. 2 Relaying turf previously set aside.		1 The measurement of these extra over items shall be based on the designed width of beds in the trench. In the absence of a bed the width shall be calculated as the nominal size of the service plus 300mm subject to a minimum width of 500mm.

41 BUILDER'S WORK IN CONNECTION WITH MECHANICAL, ELECTRICAL AND TRANSPORTATION INSTALLATIONS

Item or work to be measured	Unit	Level one	Level two	Level three	Notes, comments and glossary
14 [Items extra over service runs irrespective of depth or pipe size--cont.]	m <sup>3</sup>	3 Breaking out hard materials.	3 Details stated.		1 Hard material is any material which is of such a size, position or consistency that it can only be removed by special plant or explosives.
		4 Excavating in and removing hazardous material.			
		5 Excavating in running silt, running sand or other unstable ground.			
		6 Excavating below ground water level.			
	m	7 Next to existing live services.			1 To be measured where precautions are specifically required.
	nr	8 Around existing live services crossing trench.			2 The method of protection is left to the discretion of the contractor.
15 Pipe duct fittings	nr	1 Dimensioned description.	1 Type stated.	1 Method of jointing to pipe ducts.	1 Pipe duct fittings include bends, junctions, inspection pipes, stop ends and the like and connections to pipes.
16 Accessories	nr	1 Dimensioned description.			1 Accessories include all integral and or associated fittings and connections to pipes.
17 Manholes	nr	1 Detailed description stating maximum internal size of chamber.	1 Base slab thickness.		1 Size stated is the maximum internal size of the chamber. 2 Rocker joints are deemed included.
18 Access chambers		2 Depth from top surface of cover to top surface of base or invert level in 250mm stages.	2 Wall thickness.		
19 Valve chambers		3 Proprietary chambers boxes and the like: details stated.	3 Cover slab dimensions. 4 Intermediate slab dimensions. 5 Internal finish. 6 External finish. 7 Cover and frame: type stated.		
20 Inspection chambers					
21 Surface boxes					
22 Stopcock pits

# Appendices

- Appendix A: Guidance on the preparation of bill of quantities
- Appendix B: Template for preliminaries (main contract) pricing schedule (condensed)
- Appendix C: Template for preliminaries (main contract) pricing schedule (expanded)
- Appendix D: Template for pricing summary for elemental bill of quantities (condensed)
- Appendix E: Template for pricing summary for elemental bill of quantities (expanded)
- Appendix F: Templates for provisional sums, risks and credits
- Appendix G: Example of a work package breakdown structure

# Appendix A: Guidance on the preparation of bill of quantities

## A.1 Bill of quantities breakdown structure

**A.1.1** There are a number of different breakdown structures for bill of quantities (BQ). They each have their own advantages and disadvantages. However, computerised BQ production systems with multiple sort facilities can be used to generate different BQ formats and make it easy to trace items – as long as items have been properly codified (refer to 2.15 (Codification of bill of quantities)).

**A.1.2** *NRM 2: Detailed measurement for building works* can be adopted as the rules of measurement for building works irrespective of what BQ breakdown structure is chosen.

**A.1.3** The main BQ breakdown structures are:

- (a) **Elemental:** Measurement and description is done by group elements and each group element forms a separate section of the BQ, irrespective of the order of work sections in *NRM 2: Detailed measurement for building works*. Group elements are sub-divided through the use of elements, which are further sub-divided by sub-elements. The group elements, elements and sub-elements used are those defined by *NRM 1: Order of cost estimating and cost planning for capital building works*.

**Figure A.1: Elemental BQ breakdown structures for a simple building project**

Elemental breakdown structure	
Bill No. 1:	Preliminaries (main contract)
Bill No. 2:	Facilitating Works
Bill No. 3:	Substructure
Bill No. 4:	Superstructure
Bill No. 5:	Internal Finishes
Bill No. 6:	Fittings, Furnishings and Equipment
Bill No. 7:	Services
Bill No. 8:	External Works
Bill No. 9:	Risks
Bill No. 10:	Provisional Sums
Bill No. 11:	Credits
Bill No. 12:	Daywork (provisional)

An elemental breakdown structure supports a logical and structured approach to the quantification of a building project. Moreover, this type of breakdown structure makes it easier for the quantity surveyor/cost manager to analyse a contractor's tender price and collect real-time cost data for future use.

- (b) **Work section:** Measurement and description is divided into the work sections listed in *NRM 2: Detailed measurement for building works* (refer to the tabulated rules in Part 3 of these rules).

**Figure A.2: Work section BQ breakdown structures for a simple building project**

Bill No. 39:	Electrical services
Bill No. 40:	Transport
Bill No. 41:	Builder's work in connection with mechanical, electrical and transportation installations
Bill No. 42:	Risks
Bill No. 43:	Provisional sums
Bill No. 44:	Credits
Bill No. 45:	Daywork (Provisional)

This breakdown structure is often preferred by contractors for the purpose of pricing as all like products and components are grouped together (e.g. the reinforced concrete columns, beams, floors, roofs and staircases), whereas they can be spread among a number of different elements

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

when an elemental breakdown structure is used. Codification of BQ items using computerised BQ systems will solve the problem of preferences (refer to 2.15 (Codification of bill of quantities) of the rules).

- (c) **Work package:** Measurement and description is divided into employer, quantity surveyor or contractor defined work packages – whichever is applicable. Works packages can be based on either a specific-trade (e.g. concrete work, brickwork and blockwork, roof coverings, painting and decorating, and wall tiling) or a single package comprising a number of different trades (e.g. a groundworks package might include all excavation and earthworks, below ground drainage and the ground-bearing concrete floor-slab – so as to make a single works contractor responsible for the interface between the drainage and the ground-bearing concrete floor-slab).

**Figure A.3: Typical BQ breakdown structure for discrete work package**

Work section breakdown structure	
Bill No. 1:	Main contractor's preliminaries
Bill No. 2:	Intrusive investigations
Bill No. 3:	Demolition works
Bill No. 4:	Groundworks
Bill No. 5:	Piling
Bill No. 6:	Concrete works
Bill No. 7:	Roof coverings and roof drainage
Bill No. 8:	External and internal structural walls
Bill No. 9:	Cladding
Bill No. 10:	Windows and external doors
Bill No. 11:	Mastic
Bill No. 12:	Non-structural walls and partitions
Bill No. 13:	Joinery
Bill No. 14:	Suspended ceilings
Bill No. 15:	Architectural metalwork
Bill No. 16:	Tiling
Bill No. 17:	Painting and decorating
Bill No. 18:	Floor coverings
Bill No. 19:	Fittings, furnishings and equipment
Bill No. 20:	Combined mechanical and electrical engineering services
Bill No. 21:	Lifts and escalators
Bill No. 22:	Facade access equipment
Bill No. 23:	External works and drainage
Bill No. 24:	Risks
Bill No. 25:	Provisional sums
Bill No. 26:	Credits
Bill No. 27:	Daywork (Provisional)

Again, codification of BQ items using computerised BQ systems will allow the re-sorting of items from elements to works packages for the purposes of tendering, and vice versa for the purpose of overall cost control (refer to 2.15 (Codification of bill of quantities) at Part 2 of these rules).

This breakdown structure is usually used by contractors to procure packages of work from their supply chain.

## A.2 Bill of quantities breakdown structure for projects comprising more than one building

Where a building project comprises more than one type of building, it is recommended that a separate bill of quantities be prepared for each building; culminating in a 'summary bill' for the entire building project.

## A.3 Order of items in bill of quantities

The order of items in a bill of quantities (BQ) is:

### (1) For elemental BQ:

- (a) Elements as contained in *NRM 1: Order of cost estimating and cost planning for capital building works*.
- (b) Within each element the order of measured items is cubic, square, linear, enumerated items and itemised items.
- (c) Labour-only items are to precede labour and material items within the subdivisions in (b).
- (d) Items within each subdivision in (b) and (c) above are to be placed in order of value, least expensive first.
- (e) Preambles are to be incorporated in each element as appropriate.
- (f) PC sums are to be incorporated in item descriptions.
- (g) Contractor designed works are to be incorporated under the applicable element or sub-element, after measured work, under a heading of 'Contractor designed work'. A price analysis for contractor designed work is to be incorporated (see paragraph 2.9.2 (Contractor designed work) in Part 2 (Rules for detailed measurement of building works) of these rules).
- (h) Provisional sums are to be listed and described in a separate bill.
- (i) Construction risks to be transferred to the contractor are to be identified and described in a 'schedule of construction risks' (see paragraph 2.10.2 (Risk transfer to the contractor) in Part 2 (Rules for detailed measurement of building works) of these rules).
- (j) Where applicable, provision for the contractor to offer credits against items and components arising from demolition works and/or soft strip works is to be provided (see paragraph 2.12 (Credits) in Part 2 (Rules for detailed measurement of building works) of these rules).

### (2) For work section BQ:

- (a) Work sections as contained in *NRM 2: Detailed measurement for building works*, although separate locational BQ sections such as facilitating works, substructure, superstructure and or external works might be required.
- (b) Subdivisions:
  - (i) of work sections as contained in *NRM 2: Detailed measurement for building works*;
  - (ii) as required by *NRM 2: Detailed measurement for building works*, such as external paintwork;
  - (iii) of different types of materials; such as different mixes of concrete, different types of brick.
- (c) Within each subdivision in (b), the order of cubic, square, linear, enumerated items and itemised items.
- (d) Labour-only items are to precede labour and material items within the subdivisions in (c).
- (e) Items within each subdivision in (c) and (d) above are to be placed in order of value, least expensive first.
- (f) Preambles are to be incorporated in the appropriate work section.
- (g) PC sums are to be incorporated in item descriptions.
- (h) Contractor designed works are to be incorporated under the applicable element or sub-element, after measured work, under a heading of 'Contractor designed work'. A price analysis for contractor designed work is to be incorporated (see paragraph 2.9.2 (Contractor designed work) in Part 2 (Rules for detailed measurement of building works) of these rules).

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

- (i) Provisional sums are to be listed and described in a separate bill.
  - (j) Construction risks to be transferred to the contractor are to be identified and described in a 'schedule of construction risks' (see paragraph 2.10.2 (Risk transfer to the contractor) in Part 2 (Rules for detailed measurement of building works) of these rules).
  - (k) Where applicable, provision for the contractor to offer credits against items and components arising from demolition works and/or soft strip works is to be provided (see paragraph 2.12 (Credits) in Part 2 (Rules for detailed measurement of building works) of these rules).
- (3) For work package BQ:**
- (a) Work packages as defined by the employer, quantity surveyor or contractor, whichever is applicable.
  - (b) Within each work package the order of measured items is cubic, square, linear, enumerated items and itemised items.
  - (c) Labour-only items are to precede labour and material items within the subdivisions in (b).
  - (d) Items within each subdivision in (b) and (c) above are to be placed in order of value, least expensive first.
  - (e) Preambles are to be incorporated in the appropriate work package.
  - (f) PC sums are to be incorporated in item descriptions.
  - (g) Contractor designed works are to be incorporated into the applicable work package bill, after measured work, under a heading of 'Contractor designed work', under a heading of 'Contractor designed work'. A price analysis for contractor designed work is to be included (see paragraph 2.9.2 (Contractor designed work) in Part 2 (Rules for detailed measurement of building works) of these rules).
  - (h) Provisional sums are to be listed and described in a separate bill.
  - (i) Construction risks to be transferred to the contractor are to be identified and described in a 'schedule of construction risks' (see paragraph 2.10.2 (Risk transfer to the contractor) in Part 2 (Rules for detailed measurement of building works) of these rules).
  - (j) Where applicable, provision for the contractor to offer credits against items and components arising from demolition works and/or soft strip works is to be provided (see paragraph 2.12 (Credits) in Part 2 (Rules for detailed measurement of building works) of these rules).

## A.4 Format of bill

The bill for each element or work section is to be commenced on a new sheet. The ruling of the paper and typical headings for each type of bill are shown in Figures A.4 and A.5.

**Figure A.4: Typical BQ format for an elemental bill of quantities**

Bill No. 3 Superstructure						
3.2.5 External walls						
3.2.5.1	<u>EXTERNAL WALLS ABOVE GROUND FLOOR LEVEL</u>					
3.2.5.1.1	Common brickwork in cement: lime mortar (1:1:6)					
3.2.5.1.1.1	Walls 102.5mm thick, brickwork; built against other work	196	m <sup>2</sup>			
3.2.5.1.1.2	Walls 215mm thick, brickwork	302	m <sup>2</sup>			

**Figure A.5: Typical BQ format for a work section bill of quantities**

Bill No. 2 Superstructure						
2.14 Masonry						
2.14.1	<u>BRICK/BLOCK WALLING</u>					
2.14.1.1	<u>Common brickwork in cement: lime mortar (1:1:6)</u>					
2.14.1.1.1	Walls 102.5mm thick, brickwork; built against other work	196	m <sup>2</sup>			
2.14.1.1.2	Walls 215mm thick, brickwork	302	m <sup>2</sup>			

**Figure A.6: Typical BQ format for a work package bill of quantities**

Bill No. 8 EXTERNAL AND INTERNAL STRUCTURAL WALLS						
8.1 Masonry						
8.1.1	<u>BRICK/BLOCK WALLING</u>					
8.1.1.1	<u>Common brickwork in cement: lime mortar (1:1:6)</u>					
8.1.1.1.1	Walls 102.5mm thick, brickwork; built against other work	196	m <sup>2</sup>			
8.1.1.1.2	Walls 215mm thick, brickwork	302	m <sup>2</sup>			

## A.5 Codifying items

As well as for the purpose of making it easy to search, it is essential that every item in the bill of quantities (BQ) can be referenced back to the cost plan.

## A.6 Unit of measurement

The units of measurement for items are stipulated by the tabulated rules of measurement. For the purpose of clarity, the unit of measurement is to be entered against each item in the bill of quantities, irrespective of whether it is the same unit as the previous item.

## A.7 Order of sizes

Sizes or dimensions in descriptions are to be in the order: length, width, height. Sometimes the width of a component (e.g. a base unit) is referred to as its 'depth'. If there is likely to be any doubt, for the purpose of clarity, the dimensions are to be stated.

**NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS**

For example:

Base unit: 1000mm long x 600mm wide x 900mm high; ...

**A.8 Use of headings**

Headings usually fall into one of four categories:

- 1 Elemental or work section headings
- 2 Element or sub-section headings
- 3 Headings that partly describe a group of items
- 4 Subdivisions required by *NRM 2: Detailed measurement for building works*.

**A.9 Unit of billing**

Other than enumerated and itemised items, the unit of measurement is the metre. The exception to this rule is steel bar reinforcement and structural steelwork, which are billed in tonnes to two decimal places.

**A.10 Framing of descriptions**

The bill of quantities is a legal document. Therefore, care should be taken when framing descriptions so that there is no doubt as to their meaning.

**A.11 Totalling pages**

There are a number of ways in which the quantity surveyor/cost manager might indicate how the cash totals on each page of the bill are to be dealt with. The preferred method is for the total to be carried over to be added to the next page and so on until the end of the bill or sub-section of the bill. Unless the bill section comprises only one page, the foot of the first and intermediate bill pages should be completed as follows:

**Figure A.7: Examples of how to total pages**

	Carried forward	£			

The top of the following bill page is completed as follows:

<b>BILL 3: SUPERSTRUCTURE</b>					
<b>2.5 EXTERNAL WALLS</b>					
	Brought forward	£			

To end each bill section, the section is completed as follows:

	TOTAL carried to main summary	£			

**A.12 Price summary**

Templates for the pricing summary for elemental bill of quantities (condensed and expanded versions) are included at Appendices D and E, respectively, of these rules. The structure of pricing summaries for other bill of quantities formats should follow the same principles.

## Appendix B: Template for preliminaries (main contract) pricing schedule (condensed)

8.	<b>External and internal structural walls:</b> Structural steelwork Masonry (brickwork and blockwork) Roof systems and rainwater goods Cladding Curtain walling Carpentry General joinery Bespoke joinery Windows and external doors Dry linings and partitions Architectural metal work Work package contractor's preliminaries	/08 /01.2
9.	Cladding: Cladding systems, including integral windows and external doors. Work package contractor's preliminaries	/09 /01.2
10.	<b>Windows and external doors:</b> (Non-integral to cladding system) Windows; Louvers; External doors; and Shop fronts. Work package contractor's preliminaries	/10 /01.2
11.	<b>Mastic:</b> Mastic to windows, louvers and external door frames; and Mastic to wet areas. Work package contractor's preliminaries	/11 /01.2
12.	<b>Non-structural walls and partitions:</b> Tiling (floor and wall) Internal stone finishes Painting and decorating Soft floor coverings Suspended ceilings Work package contractor's preliminaries	/12 /01.2
13.	<b>Joinery:</b> Reception desk Internal door sets; Screens; Toilet cubicles; Timber wall linings to toilet cubicles; Skirtings; and All other second fix joinery items. Work package contractor's preliminaries	/13 /01.2
14.	<b>Suspended ceilings:</b> Suspended ceilings Work package contractor's preliminaries	/14 /01.2
15.	<b>Architectural metal work:</b> All architectural metal work items Work package contractor's preliminaries	/15 /01.2
16.	<b>Tiling:</b> Internal stone finishes Wall tiling; and Floor tiling Work package contractor's preliminaries	/16 /01.2

## NRM 2: DETAILED MEASUREMENT FOR BUILDING WORKS

Serial no.	Work package title/content	Suffix
17.	<b>Painting and decorating:</b> Painting and decorating Work package contractor's preliminaries	/17 /01.2
18.	<b>Floor coverings:</b> Carpet; and Vinyl tiles. Work package contractor's preliminaries	/18 /01.2
19.	<b>Fittings, furnishings and equipment:</b> Cupboards and shelves to storerooms Loose fittings, furnishings and equipment; and Signage Work package contractor's preliminaries	/19 /01.2
20.	<b>Combined Mechanical and Electrical Engineering Services:</b> Sanitary appliances, including kitchette sinks; Mechanical engineering services installations; Electrical engineering services installations; Public health engineering services installations (above ground); and Lifts (by named subcontractor). Work package contractor's preliminaries	/20 /01.2
21.	<b>Lifts and escalators:</b> Passenger lifts; Fire fighting lift; Platforms; and Escalators	/21 /01.2
22.	<b>Facade access equipment:</b> Building maintenance units (BMUs), including proprietary storage units. Work package contractor's preliminaries	/22 /01.2
23.	<b>External works and drainage:</b> External drainage Soft landscape works Hard landscape works Work package contractor's preliminaries.	/231 /01.2

## A

Access floors	
finishes	214
Access plant	
main contractor's costs	92
Access scaffolding	
main contractor's costs	93
Access to site	
contractors' preliminaries	52
Accommodation costs	79; 80
Accuracy of instruments	62
Adjoining property	
protection	68
Advertising and marketing	
contractor's preliminaries	23
temporary works	73; 108
Air permeability	
employer's requirements	63
Alteration works	125–130
Archaeological survey	32
Architraves	196; 216
Asbestos	
contamination reports	32
health and safety	66
Asphalt	
roofing	184–186
surfacing, site works	234–237
Antiquities	
health and safety	66
Ashlar walling see Masonry	

## B

Balustrades see Stairs/walkways and balustrades	
Bargeboards	174
Barriers and safety scaffolding	
main contractor's costs	87; 88
Bill of quantities (BQ)	
approximate	18
benefits of	17, 18
breakdown structure see Codification of bill of quantities	
budgetary control and accurate cost reporting, basis for	17
cash flow forecast preparation, basis for	17
codification see Codification of bill of quantities	
competitive bids, basis for	17
composition see Composition of bill of quantities	
contract document, becoming	17
cost breakdown structure, meaning	12
cost data, analysis/collection and storage	40
cost management/control see Cost management and control	
cost target, meaning	11
firm	18
format	267

grants, claims for	18
information and documents required see Documents; Drawings; Information and requirements; Reports	
meaning	11
non-measurable works see Non-measurable works	
post contract cost control	17
preparation see Preparation of bill of quantities	
production stage	18
purpose of	17
quantifying building works, responsibility for	19
quantity and quality of works	43
real-time cost data, source of	18
tax benefit claims	18
types of	18
approximate	18
firm	18
valuing variations, basis for	17
work breakdown structures	33
Bird/vermin control	
fittings and equipment	225; 226
Bituminous felts	176–180; 180–182
Block plan	31
Block walling see Masonry	
Boarding see Carpentry; Joinery	
Bonds	
main contractor's costs	99
Boundary of construction site	
contractor's preliminaries	22; 51; 52
Brickwork see Masonry	
Brought-in services	83
Building components/items	
deemed inclusions	48
description	46–48
not covered by tabulated rules	48; 49
quantities	46
structure of tables	45; 46
type and quality of material	47
Bulkheads	221
Burning on-site	66

## C

Capital allowances	
claims, data to support	32
Car parking	
site accommodation	70
Carpentry see also Joinery	
backing and other first fix timbers	174
bargeboards	174
boarding/flooring/sheeting and decking	173–175
casings and linings	173–175
drawings and information	173
engineered or prefabricated members/items	174
fascias	174
metal and plastic accessories	173–175

metal fixings, fastenings and fittings	175	work package breakdown structure	33; 34; 255
ornamental ends of timber members	175	example of suffix codes	37; 38; 276–278
primary or structural timbers	174	order of items	266
sarking	174	work sectional breakdown structure	33–36; 262;
soffits and the like	174	example of suffix codes	263
timber first fixings	173–175	order of items	35; 36
timber framing	173–175	order of items	265; 266
Cash flow forecast	58	Collapsible gates	203
Catering equipment	225; 226	Commencement of work	
Catwalks	206	notice period	57
Cavity insulation	167	Compensation events	
Ceilings		notification	57
decorative papers or fabrics	219	Completion of works	
finishes see Finishings to floors/walls and ceilings		employer's requirements	69
proprietary linings and partitions	187–191	main contractor's costs	95; 96
suspended see Suspended ceilings		notice of	58
Cement impregnation/injection	128	post-completion requirements	
Certificate of bona fide tender	20	contractor's preliminaries	23
Cess pits	232	details of	32
Cladding and covering		employer's requirements	32
angles	194	main contractor's costs	95; 96
beams, sides and soffits of	193	pricing schedule	77
boundary work	193	Compliance	
ceilings	193	quality standards	60
closers	194	Component drawings	31
columns, sides of	193	Composite concrete see Concrete works	
curtain walling	192–194	Composition of bill of quantities	
dormers, sides and tops of	192	annexes	20; 22
drawings and information	192	codification see Codification of bill of quantities	
extra over	193	credits see Credits	
floors	193	dayworks	20; 22
glazed vaulting	192–194	determination	33
opening perimeters	193	format	267
panel or slab cladding or roofing	192–194	form of tender	19; 20
patent glazing	192–194	measured work	19; 21
profiled sheet cladding or roofing	192–194	order of items	265; 266
rainscreen cladding	192–194	preliminaries	19; 21
rigid sheet cladding	192–194	provisional sums see Provisional sums	
roofs	193	risks see Risks	
sheet claddings or coverings	192–194	summary see Summary for bill of quantities	
structural glass assemblies	192–194	work breakdown structure	33
walls	193	Compressed air	
weatherboarding	192–194	work in	48
Cleaning		Computers see Telecommunications and IT systems	
existing buildings	125–130	Concrete plant	
site, main contractor's costs	96	main contractor's costs	92
Climatic conditions		Concrete works	
management of the works	57	in-situ	
Cobbles	236	accessories cast into	157
Code for Sustainable Homes	56; 114	designed joints	157
Codification of bill of quantities		drawings and information	151
coding system	34–38	filling mortices/holes/chases	158
cost breakdown structure	33; 34	formwork	154; 155
elemental breakdown structure	33–35; 262	grinding	153
example of resultant codes	35	grouting	158
identification numbers	34	hacking	153
order of items	265	horizontal work	152
planning breakdown structures	33	mass concrete	152
work breakdown structures	33; 34	power floating	153
		reinforcement	156

## INDEX

site works	235	post-tender estimate	39
sloping work	152	pre-tender estimate	39
sprayed work	153	pricing variations	39
sundries	158	use of bill of quantities	38
sundry work	153	work package contractor's preliminaries	115
surface finishes	153	Cost manager see Quantity surveyor/cost manager	
trowelling	153	Cost plan	39
vertical work	153	Cost target	
pre-cast concrete		meaning	11
composite concrete work	161–163	Coves	216
decking	161–163	Cranes	
designed joints	163	main contractor's costs	90; 91
drawings and information	161; 162	Credits	
frame structures	161–163	application	28
holding down or tie straps	163	composition of bill of quantities	22
panel cladding	161–163	meaning of credit	11
pavement lights	162	pre-prepared list of terms	28
rooflights	162	templates	275
sills/lintels/copings and other units	161–163	Crib walls	149
slabs	161–163	Cubicles	197
vertical panel lights	162	Curtain walling	192–194
walls and partitions	161–163	Curved work	
pre-cast/composite concrete		description	47
decking and flooring	159; 160	quantifying	46
designed joints	160	radius	47
drawings and information	159		
holding down or tie straps	160	<b>D</b>	
walls/partitions and panels	159; 160	Damp-proofing	
Conservation	125–130	applied liquid	184–186
Considerate constructors scheme	57	asphalt	184–186
Constraints and restrictions		damp-proof courses, insertion/renewal	129; 167
contractor's preliminaries	22	damp-proof membrane, excavation and filling	138
Construction sequencing requirements		flexible sheet	184–186
statement	32	other proprietary systems	184–186
Consumables and services		Dayworks	
main contractor's costs	82	calculation of labour time charge rates	29
Contaminated materials	66	composition of bill of quantities	22
Contract see <i>also</i> Standard form of contract		meaning of daywork	11
conditions		schedule of	29
main contractors' preliminaries	53	total amount included	29
works package contractor's preliminaries	113	valuation method	29
details of condition to be used	32	vouchers	59
length of	50	working hours	23; 29
Contractor designed works		Decking see Carpentry; Concrete works	
non-measurable works	25; 26	Decontamination	124; 130
price analysis	26	Decoration	
Contractor's preliminaries see Preliminaries		anti-corrosion treatments	218; 219
Copings		decorative papers or fabrics	
precast concrete	161–163	borders	219
Cornices	216	ceilings and beams	219
Cost breakdown structure (CBS)		motifs	219
meaning	11	walls and columns	219
Cost estimates and cost plans		drawings and information	218
formal stages	8; 9	intumescent coatings	218; 219
Cost management and control		painting	
cash flow forecast	58	general surfaces	219
cost planning	39	glazed surfaces	219
employer's requirements	57–59		
interim valuations and payments	39; 40		
main contractor's preliminaries	57–59		

gutters	219	measured quantities	55; 114
pipes	219	specification	55; 114
radiators	219	provided by contractor/subcontractors and suppliers

# RICS new rules of measurement

## NRM 2: Detailed measurement for building works

The *RICS new rules of measurement* (NRM) is a suite of documents issued by the RICS Quantity Surveying and Construction Professional Group.

The rules have been written to provide a standard set of measurement rules that are understandable by all those involved in a construction project. They provide advice and best practice guidance to RICS members involved in the cost management of construction projects worldwide.

This volume, *NRM 2: Detailed measurement for building works*, provides detailed rules for the measurement and description of building works for the purpose of obtaining tender prices. The rules address all aspects of bill of quantities production, including setting out the information required from the employer and other construction consultants to enable a bill of quantities to be prepared, as well as dealing with the quantification of non-measurable work items, contractor designed works and risks. Guidance is also provided on the content, structure and format of bill of quantities, as well as the benefits and uses of bill of quantities.

Moreover, the rules can be used for bill of quantities for both main contract works and for discrete work packages – including separate preliminaries for both.

Although written primarily for the preparation of bill of quantities and quantified schedules of works, the rules will be invaluable when designing and developing standard or bespoke schedules of rates, or other quantity-based pricing document.

These rules provide essential guidance to all those involved in the preparation of bill of quantities, quantified schedules of works, schedules of rates and similar pricing documents, as well as those who wish to be better informed about the purpose, use and benefits of adopting detailed measurement of their cost control procedures.

The *RICS new rules of measurement* are based on UK practice but the requirements for a coordinated set of rules and underlying philosophy behind each volume have worldwide application.
